INTERNATIONAL - CONTESTS: CHANGE IN THE ITALIAN WRTC2002 TEAM

The 2002 World Radiosport Team Championship committee has announced a change to the team being sent by Italy. According to Ari Korhonen, OH1EH, Fabio Schettino I4UFH, has replaced Maurizio Panicara, I4JMY on Team Italy. Schettino will operate with Stefano Brioschi, IK2QEI, in next summers games. (WRC 2003 Release)

**

DX

D-X, a Y-L mini DX-pedition to Nauru planned for October has been dealt a major blow by officials. VK4SJ tells Q-NEWS they are not going to C21 because the Australian Government has commandeered all rooms in the only two hotels on the island. Without accommodations they can not get a Visa to stay on the island.

But thats not all! The group has been put to an additional expense as well as suffering cancellation fees for something completely beyond their control. It seems that their travel Insurance has an out in the contract. It come under the clause of government intervention. The government says no and that lets the insurance company off the hook. (Q-News)

Also, a reminder that as of the end of June the cost of mailing a postcard or Q-S-L card domestically will go from 21 cents to 23 cents. Also, a domestic first class letter of up to one ounce will cost 37 cents. The increased rates will also affect your credits at incoming QSL bureaus, plus the cost of mailing magazines such as CQ, Worldradio, 73 and QST -- to name only a few. (CQ)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 1

And finally this week, while the entertainment industry is concerned about digital piracy of its products, the public is wondering where digital television is today and where it is really going. One of those asking is a listener to the D-X Audio Service named Victor Schmidt. He wrote to Editor and host Fred Vobbe, W8HDU, for some answers. Here is part one of W8HDUs reply as it originally aired on the May 2002 edition of the DX Audio Service magazine:

--
THIS IS AN AUDIO ONLY REPORT. To hear it, go to www.arnewsline.org and download the MP3 audio version.
--

Fred will be back next week with a look at the kinds of television receivers now in stores, those that go into your personal computer and what the future has in store. Be sure to tune in. (NRCDXAS)

Amateur Radio Newsline� Report 1298 - June 28 2002

===

A NOTE TO THOSE WHO ONLY "READ" AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the "spoken word." It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

===

Amateur Radio Newsline report number 1298 with a release date of Friday, June 28st 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams are on the scene of the worst wildfire in years, Australian researchers say they have discovered how to teleport light and an old friend in Earth orbit surprises hams on the ground. Theses stories are first on Amateur Radio Newsline report number 1298 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AIDS AT ARIZONA WILDFIRE

It's hams to the rescue, again! This time it is the RODEO/CHEDESKI fire in Eastern Arizona.

Over 350-thousand-acres -- more than half the size of Rhode Island and far from containment!

The FCC reserved emergency frequencies for fire related communications only.... during daylight hours, 7.265 MHz on 40 Meters and after dark, 3.990 MHz in the 75 Meter band.

W7TSA -- a club station operated by the Salvation Army set up at one of the evacuation centers. It operated as primary net control ... with other Arizona stations picking up the duty in shifts -- making sure the frequencies were monitored 24-hours a day.

--
OFF AIR AUDIO HERE
--

One of the priorities, was setting up a VHF repeater, to enable reliable, short-distance communications for mobiles and portables:

--
OFF AIR AUDIO HERE
--

The Forest Service has set up firefighting headquarters in the town of Show Low, and one of the operators at W7TSA, located in the town's high school, gave other monitoring stations a rundown of activity, Tuesday night, June 25th.

--
OFF AIR AUDIO HERE
--

Those two frequencies -- 7.265 and 3.990, plus or minus 3-kHz -- are reserved for fire only duties -- for up to 14-days. Watch for the FCC announcement when things return to normal.

For some interesting short-wave listening, tune in -- but please don't transmit on those frequencies unless you're actively involved in the emergency response. (Story written by Alan Kaul, W6RCL)

**

AMAZING TECHNOLOGY: LIGHT BEAM TELEPORTATION CLAIMED

Some are calling it brand new era in telecommunications. Others say its like the famed Star Trek Transporter coming true. Others simply don't believe that the first successful experiment in teleportation has actually taken place. But it appears to have happened in Australia. Q-News Graham Kemp, VK4BB, is there with the details:

--
Scientists at Australian National University have succeeded in teleportation.

That is, the disembodiment of a thing in one location and its reconstruction in another.

In this case, a beam of light allegedly disappeared in one place and reappeared in another, a short distance away, via the mechanism of quantum entanglement. Data imbedded in the beam were also recovered.

Reporting from Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.
--

Scientists say that if this finding is duplicated and verified, this experiment would certainly be regarded as one of the most remarkable steps forward in telecommunications technology so far this century. (Q-News)

**

HAM RADIO IN SPACE: LONG DORMANT AO-7 SPRINGS TO LIFE

AMSAT OSCAR 7 has returned from the dead and is shipping telemetry data on 145.9738 MHz. This, some two decades after it went silent in 1981 after its batteries failed. Amateur Radio Newsline's Don Wilbanks, KC5MFA, has the details:

--

AMSAT OSCAR 7 was launched in November of 1974. It was one of the first of the more advanced ham satellite designs with uplink on 70 centimeters and a downlink in the 2 meter band. And, working with it's predecessor A-Oh-6, it was the first ham satellite used for space to space relay. And in 1981 it went Q-R-T.

It's unexpected return came on June 21st when Pat Gowan, G3IOR, in the U-K happened across the slow speed Morse telemetry. It was then monitored by a number of other satellite enthusiasts around the world.

Why is the long dormant bird suddenly returning to life? According to the old HR Report newsletter, the battery failure in 1981 was probably a short circuit. Now, two decades and numerous charge cycles of sunlight later, the short circuit is clearing.

That theory is born out to a great extent by former AO-7 Project Manager Jan King, W3GEY. According to a quote from King on the AMSAT website, the power management levels shown in the telemetry indicate an anomaly. He says that the battery voltage telemetry shows a voltage of 13.9 volts. Normal is 13.6 to 15.1 volts. So that would suggest the battery was normal but, the half battery voltage is measuring only 5.8 volts. In other words, a dead but open circuit battery pack. This leads to speculation that the satellite is operating directly off of its solar battery array and is active only when in sunlight.

But before you decide to try operating on the old bird, AMSAT has this warning. AO-7 listens on 432.1MHz. Due to changes in Amateur Service and Amateur Satellite Service there are questions as to legality of Amateurs transmitting to the bird. This is because the uplink frequency predates the WARC '79 allocation of 435 to 438 MHz by the International Telecommunications Union for the Amateur Satellite Service.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans.
Roy.

--

To elaborate a bit more on why it might be a bad idea to try and use AO-7. The uplink frequency falls in the current 70 centimeter weak signal segment in all three I-T-U Regions. Because of this, it would appear that anyone trying to access the uplink is operating outside the Amateur Satellite Service rules and regulations. (AMSAT-NA)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Twin City Amateur Radio Club Net serving Champaign and Urbana Illinois.

(5 sec pause here)

**

ON THE AIR: FIELD DAY WAS KIDS DAY

Field Day 2002 may also have been the third Kids Day operating event of 2002. This as youngsters across the North America took to the airwaves using the new GOTA or Get On The Air stations. Amateur Radio Newsline visited the Santa Clarita Amateur Radio Club as it put a bunch of visiting youngsters on the air: Take a listen:

--
Contact Audio
--

The new Get On The Air stations have replaced the old Novice stations at most Field Day sites. And, if this year is an indication of the future the Get On The Air is here to stay. (ARNewsline�)

**

ENFORCEMENT: MINNESOTA SUSPENSION FOR REPEATER INTERFERENCE

A Minnesota ham will be off the air for a while. This based on allegations of interference to a two meter repeater. The FCC's Riley Hollingsworth, K4ZDH, explains why:

--
We issued a warning letter regarding repeater interference to Michael Priest, KB0KMJ, of Deluth Minnesota. The interference was to the Arrowhead Amateur Radio Club repeater on 146.94 MHz. Priest has responded to our letter and has accepted a three year suspension of all Amateur Radio privileges.
--

The interference Hollingsworth referred to occurred on numerous occasions between January 2 and April 4 of this year. Priest's license suspension remains in effect until midnight on May 15th, 2005. (FCC, RAIN)

**

ENFORCEMENT:

The FCC is also looking at a V-E testing session in Tennessee where a pair of Volunteer Examiners allegedly administered Amateur Radio exams to close relatives. FCC Part 97 rules prohibits a V-E from administering an examination to a spouse or other specified relative. The purpose of the rule is to help insure the integrity of the volunteer testing process. Again the FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We sent inquiries to two VE's regarding apparent testing irregularities. We need information as to why Bobby A. Raymer, N2BR, administered an Amateur Radio exam to his wife and signed-off as a VE.

And we want to know why Steven G. Hunter, KF4FAV, administered a radio exam to his brother Gary E. Hunter."
--

Both of these incidents occurred at a December 1999 ARRL sponsored V-E session in Cookville, Tennessee. Hollingsworth says that Raymer has replied and that response is under review. (FCC, RAIN)

**

ENFORCEMENT: DON'T OPERATE ON CB

Five hams have been accused of operating Amateur radio-transmitting equipment without a license on 27.585 MHz and other frequencies near the 11 meter Class D Citizens band allocation. The agency says that operating radio transmitting equipment without a license for a specific service is a violation of Section 301 of the Communications Act.

The FCC says that it is important for hams to understand that violations on frequencies other than the ones they use as Amateurs can jeopardize their licenses and could subject them to other penalties. In this case, the five were warned that they could face fines or imprisonment, as well as seizure of radio transmitting equipment. Fines normally range from $7,500 to $10,000. (FCC)

**

CONFERENCES AND CONVENTIONS: CHANGES FOR HAMVENTION 2003

Jim Trangenstein, KB8OUO has been named as the General Chairman for the 2003 Dayton Hamvention. Trangenstein, who has already served at Assistant General Chairman replaces Jim Graver, KB8PSO, who held the top post for the past three years.

Also departing from the Hamvention team is longtime Forums Chairman Jim Ebner, N8JE. Ebner and his wife plan to leave the Dayton area and relocate to North Carolina. In his parting e-mail, N8JE told his many friends that he has truly enjoyed working with them for the past fourteen years.

And two final items before we move on. According to a note from outgoing General Chairman Jim Graver, the official attendance figure for Hamvention 2002 is 24,832. Also, Hamvention 2003 is slated for next May 16th, 17th and 18th. More information is in cyberspace at www.hamvention.org. (KB8PSO, N8JE, DARA)

**

CONFERENCES AND CONVENTIONS: AMSAT IN TEXAS IN NOVEMBER

The 20th Space Symposium and AMSAT-NA annual conference is scheduled for November 7th to the 11th in Fort Worth, Texas. The event will chronicle recent and future Amateur Radio satellite technology developments. AMSAT Members are welcome to attend the AMSAT Board of Directors Meeting on November 10th and 11th. The Chair for the 2002 event is Keith Pugh W5IU. (ANS)

**

HAM RADIO POLITICS: NFCC ELECTION CORRECTION

Dick Isley, W9GIG advises that we have an error in last weeks report regarding the election at the National Frequency Coordinators Council. Dick says that the election for the three National Frequency Coordination Board positions starts on July 9th and ends on July 28th. We typoed the election as starting on 28 and the announcement of whose elected made on the 31st. As Isley pointed out, it would be very hard to get all the ballots in and tallied in only three days. (W9GIG)

**

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with a report on the financial condition of Amateur Radio Newsline, here is its Treasurer and Support Fund administrator, Andy Jarema, N6TCQ:

--

Most of the time, I try to keep these reports as light hearted as I can. This time I have to be very serious. The reason: There is no money in our account to pay outstanding bills.

Here are the numbers. In the account is about $250. In my hand -- right here -- are bills for the months of April and May totaling close to $1600.

Do the math yourself. That's a $1350 deficit, and this does not take into account the month of June that is quickly coming to an end. You can add another $800 to $1000 there. And, put in another $900 to cover Amateur Radio Newsline's part of the upcoming Young Ham of the Year Award in August.

As you know, I am the guy who writes the checks. I am also the one with the power to pull the plug. To take Amateur Radio Newsline off the phones, off the Internet and off of your radio. I don't want to do that, and I am trying not to. But if the dollars run out and none come in to replace them, I will have no other alternative. And right now, there are no dollars coming in.

As the song in the Broadway show Cabaret says. it is money that makes the world go around. In the case of Amateur Radio Newsline, it takes about $1000 a month on average to keep it going. And we need your help right now -- today -- to keep it from disappearing from the airwaves.

Remember, the Amateur Radio Newsline is a federal 501 C 3 tax exempt corporation. Your donations to it are tax deductible. The address to send your assistance is the Newsline Support Fund, Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

As always, we thank you in advance for your support.

I'm Andy Jarema, N6TCQ

--

If you missed the address for the Newsline Support Fund it will be repeated at the end of this weeks report.

**

EMERGING TECHNOLOGY: LEARNING LONG DISTANCE

The United States House of Representatives has voted to make it easier for students to take classes over the Internet. This, by relaxing restrictions on correspondence courses.

Supporters of the bill, which passed 354-70, said it would expand educational opportunities for people who cannot take courses in traditional classroom settings. The bill allows some schools to offer more than half their classes by telecommunication. It also cuts the number of instructional hours nontraditional programs must offer each week to be in line with the requirement for traditional classes. Nontraditional programs - such as distance learning courses - must offer at least 12 hours of instruction each week, while traditional programs have to provide one day of instruction.

A companion bill introduced by Wyoming's Mike Enzi is pending in the Senate. (Published news reports)

**

SPACE AND SCIENCE: NEW ANS CO-EDITORS

AMSAT North America has announced the appointment of Joanne Maenpaa, WB9JEJ and Harrison Faust WW4HF are the new co-editors of the weekly Amsat News Service. Both have extensive experience as Editors of Technical publications.

And with the change in Editors the AMSAT News Service will begin a metamorphosis of its own. Beginning with the June 16th issue, the e-letter was split the actual news section from the satellite report for a trial period. Both sections will be made available to subscribers but as separate e-mail delivered bulletins. (ANS)

**

SPECTRUM REALLOCATION: AMATEUR BANDS RETURNED TO HAMS IN PANAMA

Some good news for ham radio operators in Panama. They are getting some spectrum that was reallocated away returned for their use once again.

Two years ago the Panamanian government issued a revised frequency allocation plan which removed. It 30 meters and several UHF and microwave bands from the amateur service there.

Now, the ARRL Letter reports that an effort to reverse the changes spearheaded by the Radio Club of Panama has been successful. The Panamanian government has now reportedly agreed to restore all previous amateur allocations except for those in the 902 to 928 MHz band. (ARRL)

**

INTERNATIONAL - NETHERLANDS: DIGITAL RADIO ON SHORTWAVE

Media Network reports that Netherlands Digital Radio Mondiale is now testing from Bonaie at 21:30 to 23:25 UTC Bonaire is on 15.520 MHz in simulcast mode. That is analog and digital signals are on the same frequency at the same time.

The simulcast frequency as specified is the center frequency of the digital signal which actually ranges from 15.515 to 15.525 MHz. The analog is from 15.525 to 15.530 MHz with the analog carrier is located at 15.530 MHz, hence an analog tuner should be tuned to 15.530 MHz in order to receive the signal. You'll find the full updated schedule of DRM tests from Bonaire at http://www.rnw.nl/realradio/html/drm_latest.html. (Media Network)

**

INTERNATIONAL-CANADA: RAC DIRECTORS APPOINTED

Radio Amateurs of Canada's Board of Directors has approved the appointment of Bjarne Madsen, VE5FX and D. Howard Dickson, VE1DHD, as Directors for the Midwest and Atlantic Regions respectively. These appointments are effective immediately filling unexpired terms to December 31st of two directors who had previously resigned. (RAC)

**

DX

In DX, HB9DRD who is also G4KLX advises that there will be a Leichtenstein satellite expedition on July 13th and 14th. Jonathan and his partner Achim, DH2VA, will operate 50 KHz below the AO-40 beacon so as to stay out of the way of normal QSO's. Their Uplink will be on U-band and if signals get to weak they may change to CW operation. (VHF Reflector)

And Herb Spoonts, W3IWI, reports that the CY9 party is en-route to St. Paul Island. Operation will commence shortly and continue through July 7th. Look for them on several bands including 6 and 2 meter Meteor Scatter using standard sequenced WSJT. (W3IWI)

On HF, F6CTL is in French Polynesia and on the air until the 15th of July. He also plans to visit Rurutu and Tubuai in the Austral islands. These islands count as OC-050 and OC-152 respectively for the Islands on the Air Award program. (RSGB)

**

THAT FINAL ITEM: THE FUTURE OF DIGITAL TV: PART 2

And finally this week, we continue our look at digital digital television today and where it is going. This week, DX Audio Service Editor Fred Vobbe, W8HDU, teells you how you can receive digital television and the hardware thats available to do the job:

--
THIS IS AN AUDIO ONLY REPORT. To hear it, go to www.arnewsline.org and download the MP3 audio version.
--

Fred will be back next week with a look at the spectrum that digital television is supposed to use and how its actually using it. (NRCDXAS)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the D-X Audio Service, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). I have a BRAND NEW AMD K6-2 500mhz CPU with cooling fan. I bought it to replace the processor in my computer, then decided to upgrade the motherboard as well, so I don't need it. It's unused and in perfect shape.

I am willing to trade for ham equipment (tell me what you have to trade) or
will take best offer.

Nope, just use as little power as you can, choose a clear freq and identify.

YES... The MFJ Antenna Analyzer will let you tune any antenna. Unplug your antenna from the amp and plug it into the Analyzer.

Now... if you meant "tune the amplifier" without putting a signal on the air... that's an entirely different issue.

You can tune into a dummy load IF the antenna you plan to use is a perfect 50-ohm match (unlikely).
Otherwise, as Alan said, pick a clear frequency, identify, and tune up.
However, I would add that before you're done, you SHOULD tune at the maximum power level you plan to use for operation. The tuning can change from low power level to high power level.

Ed, W5EJ

I have an AMD K6-2 500mhz CPU with cooling fan, brand new. I bought it to
replace my CPU, but then decided to upgrade the motherboard too, so I don't
need it. Never used. Willing to trade it + cash for a 220mhz HT or mobile
radio, lap top computer (older is fine - 486 or better), or a Ten Tec 2m to 6m
transverter, or will take best cash offer.

Icom R75 communications receiver in mint condition. With UT-106 DSP unit ($140) and all Kiwa mods recently done ($170) 1) AGC/Sync detector improvements 2) additional 3.8 kHz filter in place of 15 kHz filter for better AM listening during crowded conditions and 3) replacement of audio components for even better audio quality. Comes with manual, original box, and external power supply and invoice from Kiwa. I'm selling because I just bought a transceiver for ham and SWLing. Asking $600 plus shipping for this superb receiver.
Thanks.

I have an SBE 4 ampere 13.8 VDC supply for sale.

If you're an SBE collector or if you just want a supply to
power your DC transceiver or a bench supply this should work
well for you.

See some pictures and details at:

http://home.attbi.com/~h1m/SBE/sbe.html
or
 SBE 4A Supply

Thanks for looking.

New program COAXTRAP.exe

Coaxial traps are often inserted in HF dipole antennas to isolate the ends of the wires from the the feedpoint thus shortening the effective overall length of the antenna. The antenna is then resonant in a higher frequency band. A trap is a parallel tuned circuit which is adjusted to resonate at the higher frequency.

A trap is constructed from a length of coaxial line wound as a solenoid on a cylindrical former. The program models the construction operation by assisting the designer to wind on turns until the required resonant frequency is achieved. The normal coaxial capacitance behaves as the high-voltage tuning capacitance although there is a transformer action in the manner of connecting the ends of the line together. This small program will be interesting even if the user does not intend to make any traps.

Download COAXTRAP in a few seconds from website below. About 31 kilobytes.
Not zipped up. Run immediately.

I was given an old Regency HR-2A 2 meter moble rig. It seems to work fine but
I am trying to find a manual for it. I can buy it for about $25 off the net,
but that may be more than the rig is worth. I will pay copy and shipping cost
if anyone has one.
Thanks

I have several handheld radios that need repairing. I can take these
home for repair. I need to know within 3 weeks (but probably 2
weeks), or the job will be given to someone else. Also,you must be in
Massachusetts.
Ironically, since I brought it up, now they want the repairs sooner. So, the
sooner I can
find some help, the better.

Anyone with knowledge of radio electronics willing to do radio
repairs? If you have the experience, but are not willing to do the
repairs, please contact me as well. I would be able to compensate you
for a 1 day appearance. Please email me if you want more details
about this. Also, anyone that is just interested in working with
these radios is welcome as well.

If you, or if you know someone that may be interested, please email
me. My email address is vshah101@aol.com in case you are interested.

: Thanks Steve, Everything has been taken in and well thought over. The reason
: i was looking in the frequency range I was, was because a chappy in
: california used a 5 watt 440Mhz system and said it was overkill.

And it probably was.

hi John. Let me shed some light on this subject for you.

You see, the propagation on V/UHF Frequencies (say 50Mhz and up) is Line of Sight. In other words, if you can see it, at UHF, you can talk to it. 500mW from a talkie can hit a repeater on a Mountain top 40 miles away, why can't your two talkies talk to each other 20 miles, if the only thing between the ground talkie and the airborn talkie is Space?

: I am not sure of where to start looking for a 27mhz balloon radiosonde, but
: I will have a ring around. Someone must know someone who knows someone who
: knows someons who has a spare one going cheap!

I wouldn't worry about it, John. Stick with UHF. You'll do more than fine.

While I'm at it, let me take issue with a few more comments of Steve's...

: > Half a watts probably OK, But Not FM with a low gain aerial
: > a lower frequency will give you a lower path loss

Not necesarily true. And, since Steve was talking about using 28MHz he's not
taking into consideration the fact that you'll be out of communication in around
5 or 6 miles, due to propagation. You're balloon will be 4 times that.

: > How about a cheap modded SSB CB ? Take the board out of one
: > (Balloon Radiosondes have worked for years on 27MHz)
: > Take it up to 28MHz so you don't have Good Buddy skip to contend with

More work than what you need, and besides you already said that anything more
than turning a rig on/off and gain leaves you floundering (grinz)
It is nice to note that Mr. Terry acknowledges the fact that interference is a
possibility, due to the frequency selected. A bad idea, all together.

Let's see what else Mr Terry has to say...

:(and you'll have maybe 10 watts PEP to play with)

See my explanation earlier about line-of-site propagation. More power means
more battery, means more wieght, etc... This is a Balloon launch, for heavens
sake - not a luxury cruise :-)

: > > I will be using an Icom IC-R2 scanning receiver to receive the signal,
: and intend on building a 12 element or so Yagi to use with it. I will need
: to use some sort of directional antenna for transmitting as there is no
: point transmitting away from earth.

I don't think so. Not at that elevation. a good vertical sticking out the bottom of
the balloon will cover well. you can track it with a beam if you wanted, but I don't
really think you'll need to. If you've got a pair of these talkies, then using one to
TX with, and one to RX with makes the most sense.

If you -really- want to increase the transmit range on the balloon talkie, make a
better antenna for UHF, OR add some ground radials to the existing talkie.
Cut the right length, a couple of radials, or a (approx) 5" aluminum dish around
the connector of the duck-antenna, connected to the sheild (ground) and below
the radiating part of the antenna, will give a ground plane for the antenna to
work off of. Use the Ground plane to have the antenna focus the signal back to
earth, if you're worried about enough signal from 20 miles up (which I don't think
you'll have a problem with)

You're best bet, would be to get some good antennas to put on those talkies, and go
with that, John.

Best of Luck!

What do you think his Tx efficiency is going to be constantly Txing FM with
tones ?
A narrow mode like intermitant tones on SSB will be far more efficient

I have a Kenwood V7A with the "standard" mod for extended receive, the PG4S cable, and the MCP_V7 program. The problem is that MCP_V7 doesn't seem to know about the extended receive ability of the radio, and won't let me enter any frequencies outside the original range. Is there a solution to this problem?

Thanks,
Bob Armstrong

I came across this extremely useful and well done web page for free radio manual downloads for Icom, Kenwood, and Yaesu radios and accessories both current stuff and older rigs as well.

Schematic diagrams are included with most. It includes complete service mnauals also for a few of the products. A great find!

True observation sondes have a light payload compared to the balloon and thus, it will reach high altitudes very quickly before exploding. Thus, it will remain within the visual line of sight path from a well located ground station all the time.

However, with a heavier payload, the ascent rate is much slower and the balloon might drift out of sight from a specific ground station. Thus you may have use a mobile tracking station. When mobile, you most probably do not have a line of sight path.

Using two or more balloons would increase the ascent rate, but then again, hopefully they explode at the same time.

> I have a set of Motorola t5100 2
> way radios, which transmit 500mw of power in the 467Mhz range. What I would
> like to know is if it is possible to get this range out of one of these
> transmitters?

You can calculate the line-of-sight path loss from

L = 32 + 20log(f) + 20log(d)

in which L is the path loss in dB, f is the frequency in MHz and did the distance in km. At 30 km and 467 MHz, the path loss is 115 dB.

You can not use high antenna gains at the wobbling free flying balloon, maybe just aim in the general direction downwards, thus, the maximum Tx antenna gain would be 3 dB. With 500 mW of transmitter power (+27 dBm), the ERP downwards would be +30 dBm. After suffering the 115 dB path loss, the signal in an omnidirectional antenna would deliver on the ground would be -85 dBm.

> I will be using an Icom IC-R2 scanning receiver to receive the signal,

A typical NBFM receiver will have a usable sensitivity around -120 dBm and for reliable DTMF detection maybe -100 dBm should be sufficient, thus, there is more than enough signal if you are directly below the balloon with line of sight.

> and
> intend on building a 12 element or so Yagi to use with it.

A long directional antenna is more or less impossible to operate while mobile, so you would have to stop on at a good point to get line of sight path. However, such an antenna would be a nice thing to have on a fixed tracking station, provided that the horizon is very low in all direction. In order to be able to track the balloon close to the horizon, the transmitter antenna should radiate sufficiently even to the horizon, thus the 3 dB transmitter antenna gain may be too much.

However, the UHF signal is more or less useless, once the payload has reached the ground (hopefully hanging on a parachute :-), since now you don't have a line of sight path and the signal would be heard maybe only 1-2 km. A rescue beacon at much lower frequencies would be good idea. Direction finding with a NBFM receiver is not easy, so a SSB/AM receiver with variable antenna attenuator would help in locating the payload.

If you have the GPS receiver on board, it might be a good idea to transmit the location while descending at a high repetition rate (only sending the last digits) over the telemetry transmitter and also send the whole coordinates over the rescue beacon or the last coordinates the GPS receiver had, before loosing the contact with the satellites.

Typical 'real amateur' G4 with no idea.

500mW ERP is +27dBm output
FREESPACE Path Loss over 30km at 467MHz - around 115dB
Signal received should be in the order of S9+ (if you're aware of
the -93dBm standard for S9) allowing even a few dB of extra losses.

Think of it this way - over a 1km line-of-sight path you'd expect FRS or 446
radios to give each other S9+++ signals, I hope (otherwise you *REALLY* haven't
got a clue). Now extend the distance 30 times and you obviously get 900 times
less signal - which is just under 30dB or 5 S-points.

A horizontal crossed dipole up there, giving circular polarization, should
do nicely to avoid fades during spinning - only another 3dB loss to the R2.

But what do I know, I'm 'only' a Class B CBer

It was around Spring break. We just came back from a cruise from Mexico. Its getting time for the summer. We are making our preparations for Field Day. We laid out our materials and took an inventory.

Field Day is fun with a purpose: it's an emergency communications drill disguised as a combination radio contest and public awareness exhibit.

Before Field Day, we met at the restaurant and had a steak dinner.

Field Day stations will be sprouting up all over the area on Saturday morning. Open fields and hill tops are a favorite spot because they make antenna erection easier.

When we went to Field Day, we got our party together. But first, we fired up the grill for our cook out. We had some burgers and broke open a can of beer. We were admiring the pretty girls.

We socialized with people from other clubs. It was so amazing how many people in Ham radio were slim, in shape and fit. Amateur radio operators get a lot of exercise in their hobby. This makes one attractive to the opposite sex.

Ham radio is primarily about electronics and communications. In exchange for passing an FCC sanctioned exam, radio amateurs are given access to a wide range of operating frequencies and communications modes.

Ham radio is interesting and fun. It is so great to see so many radio professionals that are also Ham radio enthusiasts. Many successful, cool people are in Ham Radio. Many people were passing by and stopped to see what was happening. We saw some really neat working rigs (radio setups)!! It was really fascinating to see some working amateur radio rigs. This caused them to want to join a Ham Radio club.

Johnny wanted to join Ham Radio because of its popularity. "All the cool kids were Hamming and I didn’t want to be left out, so I joined my local Amateur radio club.", said Johnny.
"Ham radio operators are fun and adventurous. I can’t wait to get my

license!"

Similarly, many females saw that there were female Hams and got interested in Ham Radio and wanted to join. "All in all it was a great experience and I am ready to do it again!!"

Later on there was a rock band playing rock music.
After field day we went to the beach and talked about out Ham Radio experiences.

Amateur Radio Newsline™ Report 1296 - June 14 2002

Amateur Radio Newsline report number 1296 with a release date of Friday, June 14th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Venezuela says no to W-R-C 2003 and the international conference is looking for a new home. This story is first on Amateur Radio Newsline report number 1296 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: WRC-03 LOOKING FOR A NEW HOME

The venue of the next World Radiocommunications Conference has become uncertain. This, after Venezuela withdraws an invitation to the International Telecommunications Union to host the conference. Amateur Radio Newsline's Bill Pasternak, WA6ITF, tells us the impact this decision may have on Amateur Radio:

--

According to an ARRL Bulletin, the conference had been scheduled to be held in Caracas next June and July. Whether it can be held on the scheduled dates in some other location is not yet known. This is because the planning for a conference of this size and scope generally takes two or three years.

There are a number of issues of importance to hams are on the agenda. These include reaching agreement on separate allocations for Amateur Radio and broadcasting in the the 7 MHz band along with the possible revision of Article S-25 of the International Radio Regulations. Also to be taken under advisement is the issue of whether to retain the treaty requirement to demonstrate Morse code proficiency for access to amateur bands below 30 MHz.

But all of this may have to wait if the I-T-U cannot find a new host and find one quickly. And that could be a rather problematic at best.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The International Telecommunications Union did have an option on conference space in Geneva, but that expired before Venezuela decided to cancel. The Venezuelan National Commission of Telecommunications cited ongoing economic concerns for its decision to walk away from hosting the meeting. (Adapted from ARRL Bulletin)

RESCUE RADIO: THE COLORADO HAYMAN FIRE AND HAM RADIO

A 90,000 acre wildfire called Hayman -- the largest wildfire in Colorado's history -- is blazing just outside Denver. Firefighters, supported by many volunteers including ham radio communicators moved into position ahead of the flames Wednesday June 12th. They are setting backfires to try to block the fire's path toward the city's southwestern suburbs.

According to news reports, the Hayman fire was sparked by a campfire in the Pike National Forest southwest of Denver. It has been growing in intensity and slowly moving to the north-east. The blaze now covers close to 145 square miles. So far it has destroyed 21 homes and immediately threatens another 2,500.

Earlier, evacuations had been ordered in the town of Sedelia and in the Tarryall area in Park County. Tarryall is on the fire's northwestern edge. Colorado has also put out a call for additional fire-fighting crews from across the nation to be sent to the area. About 540 firefighters were working on the fires, and 800 more were requested.

Amateur Radio is playing a vital role in the overall fire control effort.

According to Jay Miller, W-A-5-W-H-N in Albuquerque, quite a bit of support communications is taking place over the Mega Link repeater that interties the entire region. And health and welfare nets are operational on both 40 and 75 meter SSB in addition to VHF F-M. It is a very fluid situation and net frequencies vary with location and time of day. (WA5WHN, ARNewsline™)

**

RESCUE RADIO: THE COLORADO IRON MOUNTAIN FIRE FIRE AND HAM RADIO

The Hayman fire comes on the heels of last weeks Iron Mountain Fire. more than 1000 residents were evacuated near Canon City. At least 200 structures were destroyed. According to the ARRL, members of Fremont County ARES staffed a Red Cross shelter set up to serve the evacuated residents in nearby Cotopaxi. They also helped to staff the incident command post and the Deer Mountain Fire Station. Also, hams from Pikes Peak ARES staffed the Red Cross headquarters in Colorado Springs. More on this story as news is made available. (Adapted from ARRL Bulletin)

**

ENFORCEMENT: TWO MORE PIRATE BUST

Two unlicensed broadcasters are are off the air and feeling the FCC's sting. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details from New York:

--

In the first case the agency has issued a monetary forfeiture -- better known as a fine -- a forfeiture in the amount of $10,000 to Thomas A. Brothers of Detroit Michigan. Brothers was cited for willfully and repeatedly violating Section 301 of the Communications Act of 1934 involving operating an FM station on 88.3 MHz without a Commission license.

Also being ordered to pay $10,000 for operating an unlicensed broadcast station is the Revrend Doctor Phillius Nicholas of Brooklyn New York. Dr. Nicholas is also acused of operating a station in the FM broadcast band without a license to do so. He too was found to have violated the same section of the Communications Act.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

Neither Brothers or Nicholas responded to initial Notices of Violation. Both have been given thirty days to pay the fines imposed by the FCC. (FCC)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W1QWT repeater serving Scituate, Massachusetts.

(5 sec pause here)

**

THE WORLD: MISSIONARY KILLED IN THE PHILIPPINES WAS A HAM

Some sad news to report. A ham radio operator and missionary taken captive by Muslim extremists in the Philippines died during a rescue attempt on Friday June 7th.

Martin Burnham, KC0DNB, and his wife Gracia were among three Americans abducted by the Abu Sayyaf guerrillas in May of 2001 from a resort off Palawan island in the southwest Philippines. Martin Burnham was killed during the fire-fight to rescue them. Gracia Burnham suffered a would to her leg but was otherwise unharmed. A Filipino nurse held hostage by the same rebels was also killed during the rescue attempt.

The Abu Sayyaf rebels have been linked to Osama bin Laden's al-Qaeda terrorist network by United States intelligence sources. Four rebels were killed while Philippine troops suffered seven wounded. U.S. military advisors training Filipino troops in jungle warfare were not involved in the rescue attempt.

The Burnhams, from Rose Hills Kansas, were married for 19 years and had lived in the Philippines since 1986. Martin Burnham, KC0DNB, was a pilot for New Tribes Missions, flying other missionaries and supplies throughout the region.

(CQ, ARNewsline™)

**

ENFORCEMENT: FCC TELLS UTILITY TO CLEAN UP INTERFERENCE TO HAM RADIO

Yet another utility company has been told by the FCC to solve an interference problem to a local ham. This as the agency's Consumer Information and Government Affairs Bureau issues a letter to Reliant Energy Corporation of Houston Texas requesting that it work with a local amateur operator named Ed Gerber, W5GCX, to resolve an ongoing powerline interference problem. (FCC)

**

ENFORCEMENT: EX-HAM BACK IN JAIL FOR PAROLE VIOLATION

A former ham is back in jail. This with word that Jack Gerritson, the ex-KG6IRO of Los Angeles will be spending the next three years in prison for violating parole on an earlier conviction involving malicious interference to emergency service communications.

As previously reported, Gerritson was arrested and convicted in 1999 for radio interference to the Los Angeles Police Department. On November 14, 2001, Gerritson's ham radio license and KG6IRO call sign were set aside by the FCC.

Gerritson was freed from prison on probation after serving one year of a five year term. After his release, the FCC says that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. So this past January 29th, Los Angeles FCC agents participated in a pre-dawn arrest of Gerritson. His arrest came in direct response to complaints of death threats allegedly made by Gerritson on a 2-Meter Amateur Service frequency. (FCC)

**

RADIO LAW: FCC DISMISSES DISH ANTENNA CHALLENGES

The FCC has dismissed several petitions for reconsideration of it's 1996 direct broadcast satellite antenna Report and Order. In the order, the Commission had preempted local regulations that imposed restrictions affecting the installation, use and maintenance of satellite earth station antennas one meter or less in any area or two meters or less in commercial or industrial areas.

Nine petitions for reconsideration of the 1996 Report and Order were filed. Then, in October of 2001, the FCC's International Bureau released a public notice asking parties to refresh the record regarding petitions for reconsideration of the Antenna Report and Order.

In the public notice, the Bureau noted that, since the release of the order, many of the issues raised in the petitions for reconsideration may have become moot or irrelevant in light of intervening events. No petitioner filed in response to this public notice. The FCC has now dismissed those petitions on the grounds none have not indicated an intent to pursue their respective appeal. (FCC)

**

RADIO REGULATIONS: MICROWAVE RADOMES PROPOSED FOR LOCAL FOREST SERVICE SITES

The CGC Communicator reports that the Forest Service is proposing to require radome covers on all microwave dishes that are installed on Forest Service land in the state of California. The service says that this action is necessary to protect the California Condor from perching on the horizontal feed horns of the dishes and becoming microwave baked. The decision comes in the wake of an environmental lawsuit brought by conservationists. (CGC Communicator)

**

CONTESTS: CQ WW VHF WEEKEND

Changing gears, word this year's CQ World Wide VHF Contest will be held the third weekend in July. Operations commence at 1800 U-T-C on July 20 and ending at 2100 U-T-C on July 21, 2002.

Please note that this date is one week later than in past years. The change comes in response to numerous requests by the participants and potential participants. The old date was in direct conflict with the I-A-R-U contest

and the World Radiosports Team Championship games. It also occurred only one week after the European Field Day. Complete rules can be found in .pdf format at
http://www.cq-amateur-radio.com/VHFRUl02.pdf (W3ZZ)

**

AWARDS: KB2YAA NAMED BY PIONEER RADIO OPERATOR SOCIETY

And congratulations go out to Gary Tillinghast, KB2YAA, of Springville New York. This, on his being named as the Pioneer Radio Operator Society Amateur of the Year. KB2YAA is an active member of the Handi Ham System which made public the news that he had received this prestigious honor. (Handi Hams)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

REGULATORY: ARE YOU ELECTROSENSITIVE?

Are you ectrosensitive? That is, are you one of those people who is unusually sensitive to radio frequency fields?

Well a group called the Cellular Phone Taskforce thinks that some people are. It also believes that the FCC should not allow certain RF telemetry equipment in health care facilities. The Taskforce's holds the opinion that these R-F fields will have what it calls the "unwanted, illegal and unconstitutional effect of depriving electrically sensitive persons of access to health care.

Well, it turns out that the electrosensitivity issue was considered by the FCC some time ago in E-T Docket 95 dash 177. After giving it consideration, it was dismissed. More information can be found at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-135A1.doc (FCC)

**

EMERGING TECHNOLOGY: FLYING THE INTERNET

Three airlines -- American, Delta and United say they will offer high-speed Internet connections on some long-distance U.S. flights beginning this summer.

The connections will cost around $20 an hour and offer e-mail, access to the Web, and live television broadcasts. The airlines say that they hoped to eventually expand the service to most of their domestic and international flights. Passengers would have to bring their own laptop computers. (Computer Daily)

**

SPACE AND SCIENCE: HAMS SET NEW SPACE ENDURANCE RECORD

Two American ham radio operators have broken NASA's space endurance record of 188 days and four hours. But astronaut Dan Bursch, KD5PNU, declined a playful suggestion from Mission Control that he might want to go for the 438-day world record.

Bursch's fellow space-traveler, Carl Walz, KC5TIE, was with him in the space station and the shuttle and shares the endurance record. The two astronauts broke the record while in bed, ready for some shut-eye. The old U.S. record was set by Shannon Lucid in 1996 aboard Russia's now de-orbited Mir station. (NASA)

**

SPACE TECHNOLOGY: JPL TAKES COMMAND OF FRENCH SATELLITE

The Jet Propulsion Laboratory in Pasadena California is now handling command sequences for a weather satellite the French launched in December. Over the next six months, data from Jason I will be dissected by JPL's team of scientists, who will study interactions of the world's oceans and atmosphere and observe events like El Nino.

Until now, Jason I has been under the guidance of the French Centre National d'Etudes Spatiales. With the handover, JPL will be responsible for sending command sequences to the spacecraft. The French agency will continue to perform navigation and engineering tasks. (NASA)

**

INTERNATIONAL - U.K.: HAM RADIO HELPS CELEBRATE QUEEN ELIZABETH'S GOLDEN JUBILEE

On the international scene, Amateur Radio was front and center with a commemorative station near Windsor Castle when Britain's Queen Elizabeth celebrated her recent Golden Jubileee. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

As of 1530UTC on Tuesday the 4th, GB50 had made in excess of 14,000 contacts, putting them within reach of meeting their own target of 20,000 QSOs during the operation. More importantly, over 2000 members of the public had visited the station and 'Amateur Radio Experience' exhibition by Tuesday afternoon, the majority learning about amateur radio and the Foundation Licence scheme for the first time.

Also on Tuesday, no fewer than 41 members of the public were able to send greetings messages from the GB50 station, giving them a real 'hands-on' experience of amateur radio.

Jeramy Boot, G4NJH

--

The GB50 station closed down operations at 21:00 UTC on Sunday, June 9th. (RSGB)

**

INTERNATIONAL - SOUTH AFRICA: A LICENSING RECORD

South Africa has set a new licensing record. This as the results of that nations May 2002 Radio Amateur Examinations or R-A-E are announced. Q-News Graham Kemp, VK4BB, reports:

--

Results of the May 2002 Radio Amateur Examinations are published in record time. The results of the RAE, held in South Africa, written 23 May, were announced on 30 May. Each candidate who passed the examination and had completed a license application form has also been issued with a callsign.

95 of the 113 candidates who wrote the examination were successful. The highest marks were achieved by Dr G A Keen of Cape Town, 100% in both the papers.

The youngest candidate to pass the class A examination is 15 year old Q D Du Preez of Durban who now boasts with the callsign ZR5QD. The oldest to pass, 72 year old C H Stevens of George who now boasts ZR1AWG.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

The South African licensing program is considered to be one of the most progressive to be found anywhere in the world. (Q-News, SARL)

**

DX

In DX, G0TQJ, is currently in Afghanistan and operating portable Y-A. He reports he has openings to Europe on 10 meters around 13:00 UTC. Chris is using a Yaesu FT-890 transceiver running 100 watts to an 80 to 10 meter Windom antenna 50 feet high. He is active on SSB and RTTY. QSL to his home call. (GB2RS)

And OZ7SM will be active from Bornholm through June 16th. Most of the operation will be on SSB on all bands including 6 meters. Bornholm counts as EU-030 for the Islands on the Air awards program. (GB2RS)

**

THAT FINAL ITEM: ITS AN ENIGMA NO MORE

And finally this week, we have reported before on Germany's World War Two top-secret Enigma spy machine. This was the message encoding device that gave Germany the ability to keep its military movements secret during much of the conflict. Now, it appears as if a British woman actually cracked a major component of the Enigma before World War Two began, but her supervisors dismissed her theory as too simple. Bruce Tennant, K6PZW, picks up the story:

--
British newspapers have printed excerpts from the new publication titled "Action This Day." The book claims that discoveries made by a female codebreaker known only as "Mrs. BB" that could have opened the secrets of the encoding machine much earlier and shortened the war.

In the late 1930's the Enigma was dubbed the key to Germany's military communications system. Codebreakers including Alan Turing, the father of the modern computer, were trying in the late 1930s to break the Enigma cipher, but they could not work out how the keys of the Enigma machine were wired.

The book's editors, Michael Smith and Ralph Erskine, say that "Mrs BB" suggested the Germans wired the A key to the A rotor, B to B and so on through the alphabet. This theory dismissed as too simplistic, but was later proven to be correct.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles
--

The full Enigma code was finally cracked by a team of thousands of men and women, including chess masters, civil servants and mathematics geniuses.
(Published news reports)

At the risk of sounding argumentative, I'd think that the ARRL would have
that info (http://www.arrl.org).

This is where to go on the ARRL website:

http://www.arrl.org/sections/?sect=

I believe Beachwood is Ocean County; in which case you are SNJ.

73,

Al ND2K

I am about to buy a radio, but I haven't got any experience. However I am considering to buy one of the radioes mentioned in the subject. I don't know which radio is better so if you have some experience and can help me, please write. I am mostly working on HF and like it the most, so I don't care if the radio will have any other bands. I would like to which of them the best radio for HF is. I'll be pleased to get any kind advice. Thank you in advance.

I have used the IC-756 and the FT-920. In fact, I use an FT-920 for all of my contest operating activities. The current used prices of the FT-920 make it an excellent choice (definitely less than $1000).

With the release of the IC-756ProII, the 756 has dropped in price and at under $1500 it is a good buy, too.

Personally, I like my FT-920 to which I have added an Inrad CW filter. If you need more flexibility in IF bandwidths (ie. both CW and SSB options) I'd suggest the IC-756 with the flexible IF-DSP filtering.

Unfortunately, the FT-920 fits only a single optional filter (either CW or SSB). Inrad sells a modification kit to allow more than one, but that entails more work and expense.

Have never tried the IC-746 or TS-570.

73, Brian

Hi,

I have a AOR 1000XLT (portable) and a AOR 2500 (desktop) receivers. I
heard about the upcoming Ham Radio Field Day and want to know how I
might listen in on radio transmissions using these radios. Both radios
cover 500KHz-1300MHz. The only drawback I can see is that the external
antenna for the 2500 is an All ground plan antenna that is mounted in my
house attic (2nd story). I thinks it's coverage is 30-1300 MHz.

Thanks for any and all help on this,

Dave

The FT-920 is the best choice. It's an excellent rig which provides the best bang for the buck.

Thanks for the reply. Unforunately the first link refers to PSK31 and
the second one is only a 2m band plan.

Are there any frequencies that are exclusively monitored for activity
on 2m packet during field day?

Visit the ARRL website http://www.arrl.org and obtain the bands and frequencies to tune to (if you do not know Morse code, then a look at the band plans for the voice mode frequencies will be helpful also).

You might want to check around your area for the local Ham club(s) and find out where their field day stations will be located. Visitors are always welcome during field day operations, and it's more fun to participate than to just listen.

I'm attempting to run a Kenwood TS-440 from a deep-cycle lead-acid storage battery, and charging it with an automatic marine charger (Guest Model 2608)...the charger is only 6 amp but is fine for the duty cycle of my typical usage.

All is working fine, battery always up to charge between uses, etc.

Except for one problem: S9+20dB noise level on 80 meters, nearly as bad on 40, and less so on higher bands.
The noise ceases as soon as the charger is unplugged from the AC, so there is no doubt where the interference is coming from. The charger is a switching type, completely potted in epoxy, and has a notice in the owner's manual about it being an FCC Class A device under Part 15 and designed to provide reasonable protection against interference. I contacted Guest and they were not even slightly supportive.

I need another automatic charger, preferably a linear rather than switching type, or at least a quiet switching type.

Any suggestions?

thanks-

-Karl.

Some further information as a result of more testing...

The RFI does not seem to be radiated, but is rather on the 12vdc power lead coming from the battery to the transceiver. If I power the transceiver from another source, the noise ceases even though the charger is still plugged in and charging the battery...seems like an RF choke in the power lead going to the transceiver (or between the charger and the battery) might be a possibility.

Yes?

Hi Arek, I have ic756 for about 4 years, I think FT-920 is a good buy, but
ic756 is better!
of course few days ago we have tested an ic-746 and ft-920, for my ear is
better the ic746 on the lowest signals, but there was mot so much
difference.

You have another way: You can chose an oldest radio like ic-765, ts-940 for
the same price.

Good cosmetic condition, and working fine, this Bogen 35 watt (RMS) PA audio amp/mixer features up to four inputs: two balanced low-Z mic inputs, one high-Z aux source, and input from a telephone line or one mic, two aux sources, and one telephone input. Front panel controls inlcude three input gain controls (mic, aux, tel), as well as treble and bass tonal adjustments. There is an input to provide mic precedence over the aux-2 input. Outputs are provided for 8 and 16 ohm balanced and 4 ohm unbalanced systems, and also 25 volt and 70 volt constant voltage systems. Output jacks let you patch in a tape recorder or booster amp, or feed 500/600 ohm telephone line when an accessory transformer is used. Mic inputs include RF filtering. The amplifier inlcudes a resettable thermostat in the power transformer to protect against heat build up and short circuited or overloaded connections. The PA can be rack mounted with mounting ears (not included), and measures 14.5"Wx3.75"Hx11"d and weighs 15 pounds. The PA has a switched AC accessory outlet on the rear panel. Includes copy of manual. Pictures and additional info available on request. $50 + shipping anywhere in continental USA.

Hi,
I know this question may sound naive to be asked here, but I'm not sure
which newsgroup will have the expertise other than this one!!

Are the hand held two way Motorola FRS radios legal in Turkey,Greece &
Egypt?? We are traveling in a small group and would like to stay in touch
with each other using such device in case we get lost...

Thanks
Jane

The nations top ham radio cop is putting the Amateur Radio Community on notice. He says that you must use your full callsign -- not just phonetics to identify your station. And in his weekly audio column on RAINREPORT.COM, FCC Special Counsel for Enforcement, Riley Hollingsworth says that there is a proper way to identify and the FCC expects everyone to abide by the rules:

"We have been getting some questions, and I think you have too about identifying with phonetics. Now I just wanted to point out that phonetics are to assist the intended operator in understanding the callsign. They are not a substitute for identifying. The identification rule is very simple, and requires that the callsign be used in English. But now phonetics are not callsigns, they are just facilitators. And it is particularly disturbing to hear signals that are 30 and 40 over and the operator is using phonetics that are repeated. Or only phonetics." Hollingsworth

Hollingsworth says that not only does identifying only with phonetics not comply with the Amateur Service Rules, but excessive use of phonetics is entirely unnecessary.

Hello...I'm thinking of starting an informal net to discuss OTR
(oldtime radio)(particularly the CBS Radio Mystery Theater).  How many
fans of OTR (who are licensed ham radio ops) would like to
participate?  What frequencies would you prefer?  (I'm leaning towards
20 meters or 17 meters).  What days of the week and time would work
out best for you?  (I'm leaning towards Wednesday evening EST.)
Please let me know if you would like to
participate in such an activity.Non licenesed SWL's are welcome to
listen in.

Never try to impart wisdom on the humble.

Most likely, the person is stubborn and wants to stay in their lowly state.
-If you fail in imparting wisdom, the person will bring you down to the

person's level and you will expend so much wasted effort, which could have been much better spent elsewhere.
-If you succeed, the person will decide the person is suddenly better than you and that you are no longer needed and will abandon you.

The third (and desired) possibility, that the person will gain wisdom and appreciate it, is also the least likely outcome and is so unlikely as to be not worth pursuing.

I have been using the internet since before there were graphical browsers. I know how to access a webpage. It doesn't come up here at work for some reason, on ANY computer. I've even entered the actual IP address and no luck. Every other webpage I access works fine. Any idea what the webpage in question said since I can't access it?

Just FYI - You can also type in arrl.org, arrl.net and www.arrl.net and they all bring you to the same page, except here at work.

I have a "sick" Kenwood TS-530S HF Rig... It quit transmitting during a special event station exercise on Saturday- Turned it off and after it cooled down, was OK again. Then yesterday, the Rig seemed to lose Drive (12BY7A tube). Replaced Driver and Final (6146B) tubes and worked OK for a few minutes- then lost Drive again. I still have HV and the tube filaments are still on... Anyone have any thoughts??? Any hints would be appreciated!!!

Could be a few things. Dirty bandswitches can cause that at times. Wiggle them and see if it kicks in. It's possible you could have loose resistive tube pins on the driver tube. If this is the case, wiggling the driver tube will cause it to go off/on. If the pins are resistive, you will need to resolder them. There is a trap door under that socket for access. I'd go though and check all boards for loose grounding screws, plugs, etc, etc. Dunno, it sounds about a 50% chance you have driver tube pinitus. I had to fix that on my TS-830 once. MK

No insult intended, just pointing out that I and others had been able to reach it, so it was unlikely to be that site.

You just mentioned another factor, though, that you are using a computer at work.

My company, and many others, have implemented "Big Brother" style browsing, which restricts access to many sites, not always logically. They restrict the XXX, gambling, and gaming sites of course, but also those with political opinion, movie clips, and other non-work related things. Not always consistent.

Also, when bandwidth is tight, they restrict the web browsing even more to allow the official networking stuff priority. In theory, they can track all of the web sites you have been to, and how much time you are spending online with non-company business. In practice, they won't bother unless there is another reason to follow-up with a specific employee.

Not a bad idea to speak casually with someone in your local IS group.

Happy trails,
Gary (net.yogi.bear)

I will be attempting to start a club for the purpose of experimentation in the
Baltimore, Maryland area. I do not expect many joiners, due to lack of
```

advertising, and especially since it is summer time.

My posting was intended to guage interest, not to plug my club. Also, I do not want to compete with Ham Radio, just add another segment which I feel is missing. I do not feel other clubs, including QRP(low power), offer this. I would like others to start similar clubs nationwide.

I will present my club constitution and goals to the ARRL to try to get ARRL affiliation. This may not be considered "Ham" radio, so it may not get ARRL affiliation, which is fine. Ham Jargon will not be used here. To borrow another person's suggestions, this will be Amateur radio "for plain folk".

The experimenter's club would be open to anyone interested in electronics, any licence class, or unlicenced welcome. Those unlicenced will of course be encouraged to get the (no-code) licence.

Hams, students, professionals are all welcome to join. No test to join, but code advocates, contesters, codeword jargon users are not encouraged to join. There are plenty of other clubs for those interests.

This is something illusory that I suspect will slowly disappear. People forget the time value of money. Yeah, sure, they'll earn an extra $20 here or $30 there --but how much did they shell out to get that money? And what about the botched sales where they end up taking a loss?

It may be true that the true flea market nature of Dayton and other hamfests may slowly attenuate as time goes on. Further, as people get burned more and more on E-Bay, I think that flea-markets will go up in price because you can see and poke at the things people are selling while E-Bay's prices will go down some. At a flea market you can actually see what you're buying and you can pay for it and carry it away on the spot.

And by the way, hamfests are not just about flea markets. Yes, that's a big part of them. However, there are still symposia, VEC testing, socializing, and yes, even operating various radios and the like.

I think you are within the boundaries of what the ARRL covers. Hams
have a variety of interests, and even the traditional ones who look
down upon "appliance operators" should support your idea. Personally,
I have minimal interest in contesting, but I have other interests
within ham radio.

ARRL membership or club affiliation does not require being licensed,
merely being interested in radio communications. (You may need to be a
licensed amateur for certain things).

If you start something similar when you return to the Boston area, I'd
be interested in finding out about it.
Happy trails,
Gary (net.yogi.bear)

Actually, in another reply someone had posted that the ARRL was having
troubles which caused some people to be unable to access the site.

I have read that information from the ARRL webpage and I don't believe that is accurate. I have not really researched the information that I posted on my webpage, I found it and thought it sounded credible. I have emailed the webmaster at the ARRL and have invited him to read my page and see what he thinks. Perhaps the ARRL can shed some light on the whole topic. If anyone can add anything or can refute the

information that I have posted at
http://vhfradiobuff.tripod.com/hamhistory.html, please let me know.

>There are plenty of other clubs for those interests.

All you need for ARRL afiliation is that more than 60% of your members
pay the ARRL membership fee. They only want the money and body count
that they can throw at the FCC and other agencies to bolster their
claim that they speak for all hams and amateur radio operators.

You should also look at the W5YI organization to see if they meet your
needs a little better. They don't appear to be as elitist as the ARRL.

I couldn't dissagree more, , , , , ,

I have bought several radios on Ebay at prices that would blow your mind. How about a IC-751 for $300 bucks? Works and looks like new. I also bought an IC-=735 a year ago for $500, and it also was like new. Yes, I had some minor problems when I first started using Ebay, but you just have to learn the ways of bidding.

MY complaint with "new" radios is that the damn knobs are too small, they seem to be built for midgets and children.

Anyway, Ebay is for INTELLIGENT buyers and can give some trerriffic buys , , , , ,Just don't let the price get away from you. I find that it is better to snipe. My 10 second bids have almost always won. and I never, never, ever, raise my maximum spending amount.

Being that this is a ham radio, I dont see the urgency to program
freqs.I would hope your agency would be providing radio's for use in
your paramedic duties.

Let's put this to rest once and for all...

The Origin of the Term, "Ham"

Before we got involved in this magnificent hoppy, HAM was an acronym
for, "Have A lot of Money."

But once you're sucked into it, it stands for, "Had A lot of Money."

I have a Sony SW7600g for about a year now, great radio. I was in the US and could receive some ham signals on SSB while there. I'm currently back in India and have been trying to receive some ham stations but have been unsuccessful so far. I have a 20 foot randomwire antenna strung up in my living room that I use, mostly at night (around 1700 UTC), but can't get anything.

Any ideas on what I can do to catch some ham stations? Any special bands I should listen on in this part of the world? I picked up a couple of pages on the web listing the ham bands and have been trying on the 160, 80, 40, 30, 20, 17, 15, 12 and 10 m, but could barely catch a couple of stations. I did get something on the 15m band last night, but just couldn't clear it up. It didn't seem to be English, so I gave up.

Any help would be greatly appreciated, especially if there are ham operators in India who transmit at night - I would love to hear you guys. I'm in Bangalore, in the Southern part of India. Also, anyone in any other country who thinks I might catch him can send me mail. That would be a real thrill - getting someone from so far away.

Thanks in advance,
Balaya

All mode would suggest that a radio has FM, AM, CW, USB, LSB (all of the basic
emission modes). A multimode would have more than one mode, but not all, like
my Icom IC-290A, which is 2m with FM, USB, LSB and CW. It's lacking AM, a mode
I would like to have, although the AM activity on 2m is rare. Some radios call
themselves All mode, even though they often lack AM or LSB.

(OT): I have an AM tuner that picks up W1AW's code practice sessions nightly on the 160 meter band while tuned to 800 KHz CKLW. I can listen and make out both of them if I'm not too distracted. I also can mentally filter out one or the other. Poor image rejection...

Guess I should have been more specific. I want to know what qualifies as low power in the upcoming VHF contest. That link didn't seem to contain any info about power levels.

NOW AVAILABLE program "DIPCAGE1.exe"

RESONANT LENGTH, END-EFFECT, BANDWIDTH, INPUT RESISTANCE OF 1/2-WAVE DIPOLE.

This is a little more accurate version of WIRECAGE.exe which it replaces. It may be found easier to understand and use. It computes the resonant length, end-effect, bandwidth versus various SWR points, receiving 3dB bandwidth, center feedpoint input resistance at resonance, etc. Input resistance values are somewhat smaller than usually stated but this is not of great consequence since in practice there are a number of sources of uncertainty affecting this non-critical parameter.

The dipole conductor may be any wire gauge, rod or tube, or a cylindrical cage of any number of wires. The usual facilities are available to vary antenna dimensions and number of wires in small increments while observing computed output values.

This program is more of educational than practical value since it will be

seen that at HF the trouble and expense of increasing antenna diameter is
not justified by the trivial improvement in bandwidth which might be
obtained.

DIPCAGE1 is contained in one 36.5 KiloBytes file. Download from website
below in a few seconds. No unzipping inconvenience. Run immediately. Or it
can be run without downloading.

If their were less questions and arguments about 800Mhz Analog Cellular mods
and recievers,Citizens Band and also morse code for amateurs, , most
newsgroups would have no posts.

instead of whining about these issues, why dont you find something else
constructive to do with your time. bulid an antenna, make a reciever or some

other gadget. Then you let others know what you are doing and someone improves on your idea.

I know i will see alot of problems regarding my message but its true. here are my thoughts for the record.

Cellular Scanners-- Why do people want a 800Mhz full coverage reciever today. Most areas are using some form of digital service, and not even in the 800 band anymore. What is so interesting about listening to cellphones? Ive had radios that are capable of it, and never even listened to that portion. I think you just want something that has no gaps, and are willing to pay more for something that most wont listen to. If its so good how come i never see monitoring posts about how Mary got her nails done?
Unless you are in the FBI and are trying to foil the next terrorist action, dont be bothered with cellular capable scanners

Morse Code-- have you looked at new licenses lately, looks like our ranks are dropping. Ive been a Tech(No-Code) for three years and would like to use HF but could care less about morse code. Its an antiquated mode, which had its time, although still usefull sometimes, if we keep saying we need Morse code, us amateurs will be way behind times(which we still are). Lots of people say, when a repeater ID's or i am tuning around the morse sub bands, "Is that Morse Code, someone still uses that?" I say yes, its part of amateur radio. The person whom im talking to usually says "ill just go to Walmart and get those radios for $50 and dont worry about the code" Amateurs now adays need to concentrate about leading edge technology, like we once did, and stop hanging on to the past. PSk31, APRS, IRLP, and satellite is the future, so we should stop saying amateur radio is only HF and Morse. The military does not use MOrse anymore, they use ALE type signals, which is faster, and almost error free .Those of you that have been around for a while should get off your "Extra or Advanced" horses and get some new blood into amateur radio. Also a Tech (no code) IS still an amateur, so we should be treated like one. I hear it all the time, Im speaking to someone about some technical topic, and they happen to be at QRZ.com and look up my call. Then they say how come your only a tech? didnt you pass the code test? i say no and dont want to be bothered. "well its been good talking to you, 73" is the common response. And also those that upgraded, change their whole demeanor towards you like they dont remember you. WOW!! your a general, advanced, or extra! can you set up a packet node, or work a satellite via a digital mode. NO, gee i guess that morse code is really good!

Citizens Band- Those that are on SSB are almost like amateurs, and some wont get a license because they dont like the dryness of amateur radio. Regular AM'ers are usually a 50/50 bunch, some are the nicest and most helpfull people youll ever meet, and the others, well you know what im talking about.Amateur ops always complain about how 11m was stolen and CB'ers dont know anything. Well guess what, if its about amplifiers(yes ILLEGAL on 11m), DXing (less than 125 miles wink wink) or just general radio stuff, some know more than some amateurs. If a "general" is confronted by one of these CB'ers they say "well your so smart do you know Morse code" CB'er replies "NO!!". That amateur will either leave or will find what channel they are on and throw a carrier or send code with his friends. This is not the way!!! "cant we all just get along"

well thats it for now, if i made any spelling or puncuation errors, oh
well!!

Sincerly,

Steve Bossert , KC2GOG (tech and proud of it)

and i dont need to hide behind an alias like some others out there!!!

At least the radio oriented ones, it seems.
I subscribe to some where radio is rarely mentioned.

It's the onerous mix of bad politics and technology.
(keep your laws off my body, and out of my receiver)

> and are willing

I don't think any readily available "scanners" (blocked or not)
cover the sat phone bands where the FBI is concentrating.

> Morse Code-- have you looked at new licenses lately, looks like our ranks
> are dropping. Ive been a Tech(No-Code) for three years and would like to use

Now that the ionosphere is shot to hell,
that's sort of a moot point.

> Its an antiquated mode,

Just as a paper and ink book is.
Some folks (like me) are hopelessly nostalgic, though.

> which had
> its time, although still usefull sometimes, if we keep saying we need Morse
> code, us amateurs will be way behind times(which we still are).

If being contemporary is important,
and working the world is an objective,
then get a cell phone.
A multi-minute call plan,
3 watts,
and you have anywhere on the globe with Q5 clarity.

Up to date?
Get your cell phone in a color scheme to match your Hilfiger's or FuBu.

> Lots of

That's just the niche of users that GMRS and FRS (and originally CB) were designated for.
.....and $50?
Walmart (Santee CA) has Bellsouth Communicators (FRS) for less than $10
....hellofa deal.

> Amateurs
> now adays need to concentrate about leading edge technology, like we once
> did, and stop hanging on to the past.

Been down to HRO lately?
Several kilobucks will get you all the leading edge technology you can afford.

> PSk31, APRS, IRLP, and satellite is
> the future, so we should stop saying amateur radio is only HF and Morse.

They are "both" amateur radio,
all the digital gimmickry you referred to above,
as well as the old brass pounders on the "long bands".

> The military does not use MOrse anymore, they use ALE type signals, which is
> faster, and almost error free .Those of you that have been around for a
> while should get off your "Extra or Advanced" horses and get some new blood
> into amateur radio.

No thanks.
That's the equipment vendors that want more customers.
The bands are crowded enough (when they are open)
without any more impatient "new blood".

> Also a Tech (no code) IS still an amateur, so we should

There's arrogance everywhere you go in life, not just hams.

> And also those that upgraded, change their whole
> demeanor towards you like they dont remember you. WOW!! your a general,
> advanced, or extra! can you set up a packet node, or work a satellite via a

Now you are starting to sound like a sniveling sour grape whiner.

> Citizens Band- Those that are on SSB are almost like amateurs, and some wont
> get a license because they dont like the dryness of amateur radio.

A real comedy show too.
"I'm QRT and standing by" ;-)
If ham is so bad,
why don't they develop their own set of brevity codes,
instead of making such a pathetic attempt at plagiarizing from the hams?
With all the superfluous and obsequious blather on freeband,
the use of any shorthand isn't expedient or even necessary.

> Regular
> AM'ers are usually a 50/50 bunch, some are the nicest and most helpfull

> about.

Just like in the real world.

> Amateur ops always complain about how 11m was stolen and CB'ers dont
> know anything.

I think you are being too broad in your assessment here.
Damn few hams of today even remember the late 50's,
let alone the transference of a scarcely used band to the general public.
(the lowest common denominator aspect didn't emerge until well into the 60's)

> Well guess what, if its about amplifiers(yes ILLEGAL on 11m),
> DXing (less than 125 miles wink wink) or just general radio stuff, some know
> more than some amateurs.

My 10m amp was made by someone who caters to the CB market.
Parts is parts,
and if he can sling 'em together better and cheaper than Mirage,
then that's where I'm gonna buy it.

> If a "general" is confronted by one of these CB'ers
> they say "well your so smart do you know Morse code" CB'er replies "NO!!".
> That amateur will either leave or will find what channel they are on and
> throw a carrier or send code with his friends. This is not the way!!! "cant
> we all just get along"

Maybe you should look beyond the boundaries of the radio community.
You'll likely see that what you're complaining about is part of human nature,
and radio is just reflecting those squabbles within its own scope.

> well thats it for now, if i made any spelling or puncuation errors, oh

Neither do I

Very interesting indeed Steve. I have but on question...what kind of goofs do you talk to anyway? I've never heard anyone ask or make comments like you say have been said to you concerning CW.

And guess what Steve....I've got my Extra, had it a while now, and I do satellite, and V/Uhf weak signal, and HF and Contest, etc. etc. I do it on

voice, digital and believe it or not CW. So please don't stick us all in
this bag you apparantly have created.

If you don't care to do CW...fine...less QRM from a lid to contend with. I
could care less if folks like you, that apparantly hate CW, don't want to
operate CW. Why do you think that bothers types like me that enjoy it?

i did not want my post to come out in a negative way, and i should not of even of bothered to write, because i ended up addng fuel to the fire.

i really should of made the point that when radio communication first began, it was all about improving technology. i really dont see that anymore, and i am NOT talking about buying a station. thats just like some rich guy buying a brand new Harley Davidson and custom leathers, trying to pass himself as a hardcore biker.

and by the way i am not a LID, and its what ever floats your boat (as far as what mode you operate)

all im saying if you hold on to the past you cant go foward (i.e Morse Code)

if certain people enjoy Morse dont force it upon others, just like i am NOT making you agrre with any of my statements, they are open forum, and oh by the way

In recent years, I seem to have bought cars with horrible HF noise problems. First it was a '94 Ford Explorer. This time, a 2000 Dodge Durango. Explorer noise is legendary. The Durango is much better, but I still have what appears to be relatively bad ignition noise. My Yaesu FT-900's NB, plus a ClearSpeech DSP makes it usable (S6-7 noise at best) but I would like to do better. It's all coming in on the antenna so I've done all the bonding things on the car. I guess a shielded ignition might help, but I wasted $200+ on one of those many years ago and it did **absolutely nothing**.

Just wonder if those of you -- who may have experience with several mobile rigs-- would care to comment on which, if any, have truly outstanding blankers.

Thanks... Ed, W5EJ

OK, understood. I'll let the 'real' LIDS out there read your Morse at the end.

Hi, Steve...

Ham radio is such a large, diverse group that ANYONE can find things that are repulsive to him or her. In other walks of life, we just avoid folks whose behavior we object to, but on ham radio, that's hard to do. In my case, the list of things that drive me up walls isn't too long, but --for example-- my top three are...

1. The "personal" here is Bill.
2. Please help... I **NEED** modifications for my new radio... ANY modifications!
3. If you don't know code (preferably 20wpm) you're not a real ham.

Refering to one's name as a "personal" is repulsive to me. I guess it migrated from CB... dunno.   Then I think about the term "handle," which was common during my first 30 years. I used it too, though I haven't in years. "Handle" conjures up interesting pictures and certainly is no less ridiculous than "personal," so I just keep my mouth shut and move on.

Hams who spend good money on new radios and then simply cannot LIVE without modifying them makes me wonder why they bought 'em in the first place. Most of the mods won't ever be used and probably void the warranty. Dumb, dumb, dumb!

The worst behavior on the ham bands in frequently the Extra/Advanced class portions. I know many no-code techs I much prefer as friends rather than some of the higher-class bigoted jerks in our hobby. I am Extra class but I consider this elitist attitude to be the epitome of ignorance. They probably think the same of me.

Anyway... until this message, I have never mentioned any of these pet peeves on the internet, and probably won't again. The point is, there are lots of different kinds of people in this world. Though it sometmes takes effort, I just accept those differences and move on. I tell myself it's verbal "people-watching."

73 & Good luck... Ed Juge, W5EJ

I think someone:
a) Had their cellular capable scanner confiscated
b) Did not pass the Morse code test
c) Transmits illegally on CB with a linear
d) Forgot their Prozac today.

:)

Don't take life too seriously; you'll hurt yourself.

I see very few of those type posts where I lurk...
>
> instead of whining about these issues, why dont you find something else

I'm not concerned about those issues. As far as gadgets, I already
have too many as it is. I can barely walk around in this room and have
two walk in closets full to the ceilings with more even more gadgets.
I have so many gadgets, I have to do an inventory every few years to
refresh my memory on what I have. I have gadgets that I've long since
forgotten about. I've got other gadgets that I've never even tried or
plugged in yet, but I feel should be kept anyway just to further
clutter up this room. You can never have too many gadgets. Trust me on
this. But it best to keep them all a secret or else all your radio
buddys and buddettes will be over trying to scuzz all your gadgets out
from under you.

>

Dunno... Did you try asking them?

Most areas are using some form of digital service, and not even in
> the 800 band anymore. What is so interesting about listening to cellphones?

Dunno..
> Ive had radios that are capable of it, and never even listened to that
> portion.

Thats mighty "tech" of you.

I think you just want something that has no gaps, and are willing
> to pay more for something that most wont listen to.

Right on. Capitalism at it's greatest.

If its so good how come
> i never see monitoring posts about how Mary got her nails done?

She keeps it a secret.

> Unless you are in the FBI and are trying to foil the next terrorist action,
> dont be bothered with cellular capable scanners

I never let scanners bother me. They know I can smash them in a single
throw.

>
> Morse Code-- have you looked at new licenses lately, looks like our ranks
> are dropping.

I don't think the ranks are dropping. The stream of newcomers may be
slowing down though. I would think that is fairly normal considering
the "rush" of new no-code techs, etc that jumped on the bandwagon in
the past few years is slowing. The "boom" of entry level tickets
issued in the past few years was "no-code" test induced for the most
part. Most in the past that wanted tickets, but didn't want code, have
already grabbed them up.

Ive been a Tech(No-Code) for three years and would like to use
> HF but could care less about morse code. Its an antiquated mode, which had
> its time, although still usefull sometimes,

Most of the present modes are old hat. This includes CW, AM, FM, SSB.
They were all old hat modes when I got a ticket 25 years ago. So
what?
They are still fairly useful aren't they? Or do you propose we dump
all old modes? I think we should be fair about this. If you are going
to dump one old mode, might as well dump em all.

if we keep saying we need Morse
> code, us amateurs will be way behind times(which we still are).

Who is saying this? The only reason we have code tests today is
because international treaty requires it.

Lots of
> people say, when a repeater ID's or i am tuning around the morse sub bands,
> "Is that Morse Code, someone still uses that?" I say yes, its part of
> amateur radio. The person whom im talking to usually says "ill just go to

Well, maybe that would be for the best.

Amateurs
> now adays need to concentrate about leading edge technology, like we once

> did, and stop hanging on to the past. PSk31, APRS, IRLP, and satellite is
> the future, so we should stop saying amateur radio is only HF and Morse.

No that is incorrect. PSK31, APRS, IRLP, and satellites are the
present. In fact, satellites are fairly old hat. Been in orbit since
the 50's. I guess we better dump em cuz they are old hat , huh? Being
so old, it couldn't be possible for them to be very useful anymore.
Right?

> The military does not use MOrse anymore, they use ALE type signals, which is
> faster, and almost error free .

So? I'll alert the media...

Those of you that have been around for a
> while should get off your "Extra or Advanced" horses and get some new blood
> into amateur radio.

New blood? What are you talking about? None of my rf devices use
blood. Is this a new amplifier cooling technique?

Also a Tech (no code) IS still an amateur, so we should
> be treated like one.

Well, I've never kicked or slapped a no code tech yet. Where's the
beef?

I hear it all the time, Im speaking to someone about
> some technical topic, and they happen to be at QRZ.com and look up my call.
> Then they say how come your only a tech? didnt you pass the code test? i say
> no and dont want to be bothered. "well its been good talking to you, 73" is

> advanced, or extra! can you set up a packet node, or work a satellite via a
> digital mode. NO, gee i guess that morse code is really good!

What? If the no code tech works new fangled modes, will he forget all
this if he upgrades? What will happen to you if you upgrade some day?
Will you turn into a veggie overnight, or will this be a gradual
transition to a state of mental blankness? I work all these new
fangled modes, but still prefer cw if I'm just getting on the radio to
have a few relaxing qso's. Its more fun. Most new fangled modes are
actually pretty boring once the "new" wears off. Myself, I think you
are worrying too much about what others think. Who cares what they
think?

And many don't. So?

If a "general" is confronted by one of these CB'ers
> they say "well your so smart do you know Morse code" CB'er replies "NO!!".

Why is the cb'er confronting the ham? Dunno, he sounds kind of
hyperactive to me...

> That amateur will either leave or will find what channel they are on and
> throw a carrier or send code with his friends. This is not the way!!! "cant
> we all just get along"

Well, which is it? If the ham leaves, wouldn't he then be a non issue?
If he gets on the cb band and causes interference, he's a bad boy.
Riley will deal with him someday. If he sends code to his friends, he
would then be a non issue again. Crap....You've got me confused....

>

I guess that I have to chuck in my 2 cents for what it is worth.
1) I do enjoy listing to phones. It use to be fun when Dial a Drug was in full swing and you could listen to your neighbors phoning for a 8 ball of coke or a few points of heroin. Now they have all gone digital and it is just a bunch of old ladies talking about what they are going to cook for supper. The police and fire here are also in the 800 MHz band crypted digital.
2) I was on CB back in the 70s and 80s and also ran out-law with a self converted Kenwood TS-520. I do remember the fights and vandalism, (cutting coax and pulling antennas down) that was going on back then by the CBers. I liked the camaraderie of the local hams so I got my ticket to get away from the bs on 11 meters. Now I noticed that some bands like 2 meters are starting to go like CB went in the late 70s dead keys and echo machines on the repeaters and I wonder if this is because we have removed the CW filter allowing the problem children from CB into the ham ranks.
3) From the latest statistics I have heard is that Ham is having a 1 % per year growth and I think that is good but most of the new hams that I have run into give it up in the first year or two because of the interference on 2 meters and the, "this is my repeter so get off" come backs. This is what will kill us for sure.
4) CB was put in the wrong place on 11 meters and the governments are now finely rectifying that with FRS and the like on UHF. I would like to see FRS get more power, 5 watts or so and the use of repeaters but it is questionable if that will happen.
I guess that I have said my piece and now to watch the TROLLS and FLAMES come out.

Heck,

Build an antenna? Naw! I'd rather tell pompous, know-it-all jerks like you who want to tell the world how to behave to go to hell.

So sorry, old man. Your "message" failed to impress because of the poor
spelling within the first two paragraphs. I have already "bulid" an antenna
and it works just fine.
I did not read the rest.

> newsgroups would have no posts.

I really don't see much whining about those issues in the newsgroups I read.
And even if there were, isn't that what usenet is for? If you don't like
those posts, don't read them.

> instead of whining about these issues, why dont you find something else
> constructive to do with your time. bulid an antenna, make a reciever or
some
> other gadget. Then you let others know what you are doing and someone
> improves on your idea.

I built all but one of the antennas I'm currently using. I have a couple
more homebrew antennas in storage that I built for the fun of it but don't
have a use for. I'm also currently in the middle of building a 10 MHZ WWV
receiver. I also have plans to build a QRP transceiver in the near future.
Have you built anything lately?

> Cellular Scanners-- Why do people want a 800Mhz full coverage reciever
> today. Most areas are using some form of digital service, and not even in
> the 800 band anymore. What is so interesting about listening to
cellphones?

Maybe it's just something else to listen to? Or maybe some scanner listeners just don't like the idea of the government telling them what frequencies they can and can't listen to at the behest of the cellular telephone lobby? Or maybe they'd like to have a scanner without any gaps so they'll be able to listen to new services that take over the 800 MHZ band once it's vacated by analog cellular phones in the future.

> Morse Code-- have you looked at new licenses lately, looks like our ranks
> are dropping. Ive been a Tech(No-Code) for three years and would like to
use
> HF but could care less about morse code. Its an antiquated mode, which had

Morse
> code, us amateurs will be way behind times(which we still are).

AM is also antiquated, second only to CW. Yet there are many hams who enjoy using AM. It's also the primary broadcast mode in the MF and HF bands. Should we scrap the use of AM? CW is fun to those of us who enjoy it. I'm not going to tell you not to use FM in the VHF/UHF bands.

> Amateur ops always complain about how 11m was stolen and CB'ers dont
> know anything.

Frankly I've never heard an amateur op complain about the 11 meter band being stolen from them. CB has been around for around 50 years now, so I think there are few hams who really have a hangup about losing the 11 meter band. As far as CB'ers not knowing anything, I guess you never heard one saying "QRT and standing by." Yes, there are a few who are really technically savvy, but the most aren't. I could tell you many funny stories of technically-challenged CBer's, but frankly I don't give a rat's behind what goes on on the CB band.

> If a "general" is confronted by one of these CB'ers
> they say "well your so smart do you know Morse code" CB'er replies "NO!!".
> That amateur will either leave or will find what channel they are on and
> throw a carrier or send code with his friends. This is not the way!!!
"cant
> we all just get along"

This has me confused. If a CBer is talking to an amateur on an amateur frequency, he is operating illegally. If an amateur is using amateur equipment on the CB band, he is operating illegally. I've never heard CBers & amateurs talking to each other on the radio though.

> Steve Bossert , KC2GOG (tech and proud of it)

Tom Sevart, N2UHC (Extra and just proud to be a ham)

> and i dont need to hide behind an alias like some others out there!!!

Neither do I.

You could surf over to http://www.arrl.org   "ARRL" is the
name of a major American ham club, and they have a goodly
amount of info on ham radio signal reception. And people
you could email questions.

Also try: rec.radio.amateur.dx   "DX" is a ham term for
"long distance reception".

I'm getting a frame with 'page not found' on the site tonight, but they have an excellent range of RF bits and bobs if you download their catalog.

Believe they are also available at low price from G-QRP club, and at
very high price in Germany (hi)

This was my 1st hamvention and I had a blast! I've heard that attendance is down this year, but I think there was just enough people... enough to talk to, buy from, work on the air, etc. but enough that it's not a gigantic mob of screaming operators. :) I liked the Yaesu VX-7 display even though I only half-believed that they were actually submersed. They WERE actual radios though, I believe they were on weather frequencies. It was great to be able to actually use the radios on display, I've heard that at previous 'fests, you had to wait to use them. I got to sit and look at / use the PROII (I think that's what it was) for about two minutes! :) I didn't buy a program though, it looked like it was mainly sold as a souvinir (did I spell that right??). The crystal scanner, three business band HTs (one convertable to 2m), and two FRS radios are souvinirs enough. :) Plus, forum lists and maps of the arena (which were actually MORE ACCURATE than the ones in the programs) were available for free to those who asked nicely. There were a few good scanner dealers there. I stopped at Bearcat Radio Club and another scanner mag (which one?). Bob Grove planned to be there but had a family emergency :(Too bad, because I was looking forward to listening to him at the Teachers forum. One thing I noticed was that there's a LONG hallway that goes around all the arenas. Very handy once I found out about it. Also, did anyone else see the 25kw dummy load out in the flea market? Wow.. that's one big dummy load.

```

Amateur Radio Organizations should change their name to Ham Radio Organization. For example, the Boston Amateur Radio Society should call itself the Boston HAM radio society.

Ham radio is about operating radios. Ham radio is about contesting, working all states, collecting QSOs, etc. This is the Ham culture.

For others, Amateur Radio is for the experimenter, the radio direction finders, the kit builders, the tinkerers, the designers The people looking for the Amateur Radio aspects will not find them in Ham Radio clubs. Some Amateurs are not Hams. Some Amateurs believe Ham is a food, rigs are for ships, and do not want to use codewords (such as QSO, 73, etc) in their conversation.

The ARRL seems to encompass both groups, they are provide a resource for all of the aspects of Amateur Radio. Fortunately, they do not seem to be biased.

The clubs seem to represent the "Ham" interests. Therefore the clubs should change their name from "Amateur" to "Ham". Other Amateur organizations should be started for those interested in the experimentation aspects, possibly called "experimenter" clubs, to distinguish themselves from "Ham" clubs.

Many (most?) Hams do not want to get involved in the electronics aspect. This is understandable. Why should the electronics aspect be imposed on these Hams?

I belong in the experimenter group. Right now, there are almost no Amateur Radio clubs for those that are interested in radio electronics. I would like to see more of these clubs starting up. I believe this would increase the number of Amateur Radio member by a lot. Lets have more clubs for people interested in electronics.

In defense of the sale. That was no ordinary 101e. A mint condition Model T Ford brings a little more than the original price too. They aren't very good cars, no A/C, no cruise, no stereo, etc.

I have for sale one IFR 1200S
This unit is in good condition, but is missing one knob and will occasionally go out of lock. I am the original owner and it has been in use in our shop since it was new. The scope is a little dim but works ok. Was last calibrated in 1999. SN is 3650 and I will ship it in an original 1200s box. Will sell for $2500 plus shipping.
If interested please email me or call daily at 1-800-431-2929 ask for Steve.
steve@commtechradio.com

I agree that $5 isn't going to bankrupt anyone at the Hamvention,
but there is also a matter of principle involved. I'm sure there
are tough pricing decisions that the DARA people had to make, but
I found this one particularly onerous, and made more so by DARA
neglecting to inform people of their decision beforehand. I was
frankly offended, as much as I would be if a restaurant I frequent
suddenly decided to impose a surcharge but neglected to mention
the fact before presenting the bill.

The decision to ding people for a program is simply a bad one and
we should be unequivocable about letting the people who run the
Hamvention know that.

Rob

Works super for me and always have... I just went there 10 seconds ago...
their latest story is dated today May 22....

Dayton Hamvention 2002 Crowd Rises Above "The Big Chill" (May 22, 2002) --
Exuberance and enthusiasm at Dayton Hamvention 2002 by and large overcame
the rainy, then unseasonably chilly, weather during the three-day event.
Pre-Hamvention speculation about a considerably smaller turnout in this
post-September 11 era, also seemed to have been off the mark. This year's
Dayton crowd appeared to be just about as large as last year's. Hamvention
officials are not expected to release an attendance figure until next week

Stolen on May 17, 2002 in the Fresno, California area was a rear plate with tags.

License plate was WA6KUE.   Belongs on a White Ford SuperCrew F150 Truck.

If you see it on something besides a White Truck, chances are, the driver has no idea what Amateur Radio is.

The plate is being replaced; but, watch for frauds.

73, Conrad Nerdahl - WA6KUE conradn@attbi.com

knowbody63@aol.com.ip wrote
> Troll, Troll Troll your Boat......

How was my post a troll? I did flame anyone. I made an observation. I backed up this observation with examples. I offered a proposed solution. Sometiimes, if you disagree with the comment, it is just easier to say it is a troll than to refute it.

My point was that Ham radio clubs are not for those that are interested in experimenting with radios. Also, not ervery amateur is interested in using codewords in their conversation.

Do you disagree with this? If a survey was taken, what percent would be interested in electronics? I have been to several Amateur Radio clubs and have perhaps found around 3 people interested in electronics. Also, they don't attend very many of the meetings.

The people that want to experiment and not use codewords would feel out of place in most Ham Radio clubs. I believe there are others that feel the same way I do.

The solution I offered was to start specialty clubs that are for the prupose of experimentation. This would not take away from the existing clubs. This would add (or bolster) another interest to the Amateur Radio umbrella.

this...."

    I think the whole topic of "Amateur Radio isn't Ham Radio" is silly.
    For Example, looking at the (only) three magazines available to US Hams:
  The Actual Title of CQ Magazine, at the Top of every cover, is:
 "AMATEUR RADIO Communications & Technology"
   The cover of QST states:
"QST, devoted entirely to AMATEUR RADIO"
   and 73's cover is:
   "73 Amateur Radio Today"
   Using your logic,  People in the USA interested in HAM Radio don't have any
magazine to read, since the only 3 are all devoted to Amateur Radio"...... Give
me a Break!!!  These terms are used interchangably by all in the Hobby &
industry, & these 2 terms Have NOTHING to do with weather a particular Ham
likes to Build his own rig, or Not work Freqs above 400Mhz, or  has "this"
class license over That, or any other "valid" point that you think you made....
 etc..

The magazines give coverage to all aspects. What percentage of Hams read the technical articles? The ARRL handbook gives coverage to all aspects, but makes clear what a "Ham" is. Even then, the Handbook says "Amateurs like to do xxx", as if ALL Amateurs like to do those activities.

Ham radio is what people actually use. If (hypothetically) 95% use codewords and are not interested in electronics, then this is what Ham radio is.

>   I Agee that there is no reason to change any names. There are
>very many facets of this hobby that don't fit into either of your 2
>Definintions, do we then come up with additional fractured names

All Ham communications must use the codewords, If you use ordinary conversations without the codewords, are you still considered a Ham?

Perhaps a name change is not required, but the need for an experimenter's specialty group is desired.

Does anyone know of a website with sample sounds? I'm new to amateur radio and I'm having a hard time determining what sound is what. It would be nice to hear sounds that were labeled, like "this is RTTY" and "this is a weather fax", etc.

If anyone can help me I would definately appreciate it. I have a Yaesu FT-11R that has somehow lost it's programming. No big deal, except that I do not have my book with me and I am a paramedic away at work right now. I have to program some of my basic channels back in using the keypad and cannot remember how. If someone could steer me in the direction of online manuals or a summary of how to do it again I would be extremely greatful.
Thanks.

Handheld scanner;

I've gotten my moneys worth out of my BC 200 XLT. Our town has gone to trunked. I'm not sure what type. I'd like to get another scanner for commercial band services, aircraft and 2mt HAM band since I'm a HAM.
I noticed that Uniden does not sell all the units on their web site that are for sale at other places. So I'm thinking that maybe they are just selling the latest models or the models they plan on keeping in production. I guess I would also like all the channel storage possible as long as it doesn't shorten battery time. Our local city services are at 866-868 MHz so I will need UHF. And I also need 144 - 148 MHz for late night HAM listening.
Of course I've been looking at the Uniden BC245XLT. But I've heard there are 1000 channel models out (RS I guess) and I think the digital ones are for sale or near FCC type acceptance.
So how about some suggestions. I got lots of hours of monitoring from my 200XLT. Thats cheap entertainment. It's been so long I can't remember when I bought it. It was a real work horse. Please pass along any "lemons" you know of. You can email me anonymous lee@texw.com I don't want to get anyone upset about their radios.

Many-Many Thanks, Lee

Contact one of your local radio clubs, for at least one experienced tower person. How you raise a tower (e.g. Gin Pole, Crane, All at once) depends heavily on your location and hazards (electrical transmission lines, neighboring houses, adjoining structures, etc.)

Some clubs have a common gin pole for tower usage by their club members.

Hello,
          Just found something in my 'archives' ... probably there are other
sites, but this might help you.

Try : http://www.wunclub.com/

And click on the "DIGITAL SOUNDS" access.

Otherwise go direct to :  http://www.wunclub.com/sounds/index.html

Greetings from a Belgian Ham.

Patrick.

Go here and download some free programs and listen to them out of the speakers of your sound card.   The programs are such that you can operate things such as rtty just by hooking up the sound card input and output to the speaker and microphone inputs to a transceiver.

I have been going to the Dayton HV for 22 years now and I have seen allot in those years, but Ebay is ruining ALL hamfests. A couple of years ago a person with a very pronounced New York or Bronxish accent came to our local Cincinnati hamfest and bought everything in site that was reasonably priced. It didn't matter what it was. While at a table I overheard this conversation. Bronx "How much is this?"   Seller "$50.00."   Bronx "Not worth it. I'll give you $30.00" Seller "Wellllllll OK." The seller proceeds to bag the item. Bronx to friend while still in easy earshot of seller "I'll get $125.00 for this one at least on Ebay!"   Resellers like this one are truly what is killing Hamfests. If I was the seller and heard this, why would I bother taking an item to any fest? I'd sell it on Ebay and pocket the $$$ instead of making someone else rich.

Sure; But those are same guys that would buy up everything at opening first day and move it to their table and mark up 200%. And sellers like that either are motivated to sell or unaware of what they have to sell. Nothing has changed at all.

Are you nuts???
Just look at your License if you have one. "Proficiency in Armature Radio"
not ham radio.
The nick name, "ham" came from the professional Marconie radio opps who
would listen to the bragging and bs on the bands and say that they were
hamming it up. This was back in the early days of radio before WWII.
It is only a nick name and nothing else.

Hi there.
I don't know if this is the right group. I'm writing here for the first time with my problem.....

I'm looking for software which can decode RDS information, but .... this software should be 8051 or compatibile .... What i mean. I Built RDS decoder based on TDA7330 and i want to connect it to the microcontroler with LCD - software should decode information from TDA.. and display it on LCD.

This is my problem and now a pleas for you:
Does anyone know where i can find such a software, or does anyone now a person that can help me with that.....

PS Thanks for any informations

That's not actually true... Check out this URL for the REAL scoop on
why Amateur Radio Operators are known as "HAM's".

When I put my TM-733 into crossband repeat mode, the mic
is active and any sound in the room gets added to the signal.
Wierd.  Yuk.
```

Short of adding a switch to short out the mic element, does
anyone know a way to mute the microphone during cross-band
repeat mode?

Unfortunately I can not access the ARRL website. I haven't been able
to bring it up for about a week or more. What does it say?

I've had no trouble reaching it a few times in the last week.

You might try typing it in again, just www.arrl.org, as some inside
page you have bookmarked may have changed.

Happy trails,
Gary (net.yogi.bear)

When I go into "remote entry" mode by pressing

[F] + [CONT SEL]

...the S-meter blinks as it should to denote remote entry mode. But when I press keys on the keypad they do not do what they should. Most often they simply cause the display menu to toggle between the regular menu and the "F" menu.

Anyone recognize this problem? Anyone know a fix?

Thank in advance,

Mark
KF6ONE

So I guess that we split hairs. The commercial operators were the Marconie opps that I mentioned so what is it that is not true about what I posted? Some thing that the article failed to mention was that at one point in history the Marconie opps were forbidden to communicate with any non-Marconie radio operator including for emergencies. This meant that all shipping traffic was handled by way of the Marconie opps. and they gave the nick name to the Amateur opps that the heard.

Ham: a poor operator. A 'plug.'"

That's the definition of the word given in G. M. Dodge's The Telegraph Instructor even before radio. The definition has never changed in wire telegraphy. The first wireless operators were landline telegraphers who left their offices to go to sea or to man the coastal stations. They brought with them their language and much of the tradition of their older profession.

In those early days, spark was king and every station occupied the same wavelength--or, more accurately perhaps, every station occupied the whole spectrum with its broad spark signal. Government stations, ships, coastal stations and the increasingly numerous amateur operators all competed for time and signal supremacy in each other's receivers. Many of the amateur stations were very powerful. Two amateurs, working across town, could effectively jam all the other operators in the area. When this happened, frustrated commercial operators would call the ship whose weaker signals had been blotted out by the amateurs and say "SRI OM THOSE #&$!@ HAMS ARE JAMMING YOU."

Amateurs, possibly unfamiliar with the real meaning of the term, picked it up and applied it to themselves in true "Yankee Doodle" fashion and wore it with pride. As the years advanced, the original meaning has completely disappeared.

Amateur Radio Newsline™ Report 1293 - May 24 2002

This is a special announcement: Attention all listeners. Please be advised that our next newscast, Number 1294, will not be released until Sunday evening June 2nd. This is due to staff travel to an out of town event and will affect only next weeks newscast. ARNewsline newscast number 1295 will return to our normal Friday release on June 7th. Please adjust your release schedule accordingly. Thank you.

Also, once again this weeks Amateur Radio Newsline™ newscast is extremely audio intensive. We believe that it is impossible to really appreciate the words of those quoted without hearing them for yourself. For this reason we suggest that after reading this weeks print edition that you take your web browser to:

http://www.arnewsline.org

Click on the newscast number then download the MP3 audio file. Next sit back and experience a 20 minute "audio picture" of Hamventionr 200 for yourself.

Thank you. End special advisory.

--

Amateur Radio Newsline report number 1293 with a release date of Friday, May 24th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 2002 turns out to be the year of surprises at Hamvention. This story is first on Amateur Radio Newsline report number 1293 coming your way right now.

(Billboard Cart Here)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 1

If nothing else, the 2002 Dayton Hamvention was filled with surprises. Surprises like this:

--
"I just flat do not believe that. What are the odd? The top three prizes and people without calls win them? There's a lot of guys walking out of here with their heart down in their shoe soles."
--

That's right. The top three prizes -- three top line ham radio stations and this year they were won by non hams. And before some of you channel cops start saying that non hams cannot legally win ham gear guess again. The law is on their side. Not only did they win it. They went home with it.

Another surprise? How about business. Business as in what may be a record year for vendors. Why? Because those who came to Hamvention 2002 were armed with cash and ready to buy. Just ask Radio School's Gordon West, WB6NOA:

--
Gordon West WB6NOA: "Well at he booths I was working to show the Gordon West Radio School products the sales were very, very positive. I mean -- people came here to get equipment and to get back on the air.

Many new hams were going on the air for the first time, yet there were allot of older hams who were sort of not on the air allot trading up to new equipment.

Certainly, I think we are about where we were last year for attendance but enthusiasm in acquiring new equipment? Yes! Much more than last year.
--

As to the size of the crowd? There is still no official figure. Also, the weather was a bit unpredictable. Friday was wet. Saturday was first clear then wet. Sunday turned out to be the nicest weather of all. CQ Magazine's Rich Moseson, W2VU, was happy either way:

--
Rich Moseson W2VU: "I just love rain. On Friday it rained and everybody was inside and it was very, very busy and we had a great show.

Saturday it was nice outside and the Flea Market people were happier than they were on Friday. Overall, as always. Good show."
--

Moseson's view was echoed by Chip Margelli of Vertex Standard -- the Yaesu people:

--
Chip Margelli K7JA: "I think Hamvention this year was great. The weather was very cooperative especially on Saturday. This gave us lots of time to talk to customers and describe our products. We think that everybody was in a festive mood and a buying mood and that was good especially with all of the new products we have here. We've had a tremendous time here at Hamvention."
--

In reality, Hamvention 2002 was a buyers market. Dealers kept prices low and lots of major ticket items moved across the sales counters. In fact, it was possible to buy a Yaesu FT-817 for under $500.

As to what was new this year? Listen to what some of the company reps brought with them starting with Vertex Standard's Chip Margelli.

--
Chip Margelli K7JA: We have introduced new products in every major category. We introduced the Mark V Field high-end HF; the FT-897 second generation `man-pack' portable; the VX7R submersible handheld; the FT-8900 `quad-band' 10 meter, 6 meter, 2 meter and 70 Cm mobile radio and the Wires Internet repeater linking system. So we have had a very busy time."
--

Not to be outdone, Kenwood's Leo Famie, KJ6HI, said that those coming to his booth wanted to see a little HT called the F6:

--
Leo Famie, KJ6HI: F6, our new HT. A tri-band hand-held covering 2 meters, 220 and 440. It has a receiver from about 500 Kilohertz to 1300 MHz but blocks out cellular telephones. But the neat thing about this radio is its all mode receive in the band B. AM, FM, USB, LSB and CW."
--

Famie says that dealers sold well over 300 of these new H-T's making the F6 was a bright star for Kenwood at this years Dayton show.

And what about Icom you ask? We asked Ray Novak, KC7JPA, what was hot and what those coming to the Icom booth wanted to see:

--
Ray Novak, KC7JPA: 706 Mark 2 G by far. Also allot of interest in a new digital radio that we have that will give you bandwidth for data equivalent to a T-1 line."
--

One guy who always has something new up his sleeve is MFJ's Martin Jue, K5FLU. This year he gave Amateur Radio Newsline a peak at two new goodies. The one that really caught our eye is a high frequency beacon network receiver that is so pretty that it would be as much at home in your livingroom as in your hamshack. Not only that, it lights up a LED on a map to show you what beacon you are actually hearing: Martin gave us a simple explanation of how it works:

--
Martin Jue, K5FLU: "The beacons are precisely timed...so everything is exactly right. What we did was to duplicate that timing sequence in here. And we make sure that it is always right because we have an atomic clock receiver in here."
--

MFJ also showed its new Morse code interface box. Not only does it decode the C-W signal your receiver is hearing. It also lets you plug in a key, paddle or even a keyboard and send Morse like a pro.

But new gear and great prices were not the only surprises at Hamvention 2002 and we will have more later on in this weeks Amateur Radio Newsline report. (ARNewsline™)

RESCUE RADIO: HAM RADIO ASSISTS FOLLOWING UK RAIL ACCIDENT

RAYNET -- the United Kingdom's equivalent of ARES and RACES here in the United States was called out on Friday, May 10th. This, following a railroad crash that occurred in the city of Potters Bar less than one mile from the RSGB Headquarters.

The accident took place at about 1 P-M. G4MWO says that Hertfordshire Raynet County Controller, Trevor Groves, G4KUJ, was contacted at home at 2 P.M. and asked to assist with setting up the local Emergency Control Vehicle. Groves had it operational by 4.20 P.M. He then provided technical and administrative support to the relief administration staff who used it until office accommodations were arranged at about 8 P.M. that evening. (GB2RS)

**

RADIO LAW: COMMERCE COMMITTEE VOTES TO DELAY SPECTRUM AUCTION

Back on this side of the Atlantic the House Energy and Commerce Committee approved a measure that would delay the government's June 19th sale of spectrum now used by television broadcasters and sought for wireless services. The panel approved the action on a voice vote May 5th. As previously reported, this legislation was sought by a large segment of both the wireless and broadcast industries. The bill now goes to the House floor for consideration. (Published news reports)

**

SPECTRUM SHARING: MOVE OVER DIRECT TV - YOUR SPECTRUM IS ABOUT TO BE SHARED

The 12 GHz downlink spectrum used by Direct TV and Echostar is about to shared by terrestrial services. The CGC Communicator says that thanks to a creative idea and a multi-year lobbying effort by Northpoint, the 12.2 to 12.7 GHz band will soon be used for new video and broadband communications services, such as local television programming and high-speed Internet access. Technically, the new service is called "MVDDS," short for Multichannel Video Distribution and Data Service. (CGC Communicator)

**

RADIO ACCIDENT: FIRE ATOP THE KCBD-TV TOWER

The C-G-C Communicator also reports that KCBD-TV, in Lubbock, Texas, recently installed a new Andrew batwing antenna designed to accommodate both its channel 11 NTSC and channel 9 digital transmissions. After only five days of operation with just N-T-S-C power applied, there was an apparent arc-over and the aerial was destroyed by fire. The station resumed NTSC operations using an old Alford antenna located on the same tower. Engineers are trying to determine the cause of the failure. (CGC Communicator)

**

GATHERINGS: WEAK SIGNAL BREAKFAST IN NORCAL

The Western States Weak Signal Society and Sidewinders on Two will jointly host a the semi annual "Brunch, Grip and Grin" in Northern California. The Date is Saturday June 1st. The location is Bakers Square in West Sacramento California. As usual, there will be door prizes and a good raffle of a radio. It all starts at 9:30 a-m, Pacific Savings Time. For more information contact W6OMF by e-mail to w6omf@cwnet.com. (VHF Reflector, WSWSS)

DAYTON 2002 - A YEAR OF SURPRISE - PART 2

Now, continuing with our coverage of Hamvention 2002, lets look at the forums. Emergency communications was this years Hamvention theme and all of the sessions -- about 50 of them -- were in some way dedicated in some way to it. And while we could not visit every one of session, we do know that for all three days the forum rooms were packed. In fact, many sessions had people lined up against the walls and sitting in the aisles. That included our own Ham Radio Town Meeting that featured Popular Communications Editor Harold Ort, N2RLL as the keynote speaker. His theme: Emergency communications means more than just ham radio:

--
Harold Ort N2RLL: "I want to say that now is the time to learn to operate with other services in concert and not just with ham radio. That's really my message. And if you are wearing the blinders: If you are wearing the ham radio blinders -- take them off. Please.

I don't have all of the answers but I would like to have folks depart from business as usual. We have allot of smart people out there with specialized know-how.

And that's the beauty of ham radio. We can bring allot of radio users into the emergency communications mix so that we can help to make America safe.

Ladies and gentlemen: If we don't get it after 911, we really never will. Thank you very much. (Applause)
--

Ort's message: Its time to break down the barriers that divide us and work together for the good of our nation and the world. Or as Harold himself said: If we don't get it after 911, we never will.

Another session that drew a stand room only crowd was the FCC forum with Bill Cross, W3TN. That one you can hear right now on the RAIN Report. Its on the web at in streaming audio www.rainreport.com or on the phone at 847-827-7246. (ARNewsline™)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 3

The Hamvention Grand Awards banquet was held on Saturday evening. This years recipients included Owen Garriott W5LFL and Tonly England, W0ORE who shared the Special Achievement award:

--
OwenGarriott W5LFL: "As perhaps you could tell from that brief introduction, hamming has been a part of my life for over 55 years. I started with my father and perhaps you can tell from the sequence of events in my professional career hamming was a very strong influence on the direction. I went to undergraduate school, to college and to a

professional career after that.

I know that this story is not unique. In fact it wouldn't surprise me if there were some 10% to 20% of those of you in the audience who could provide a similar story about how hamming has influenced your professional career as well as your past-time in the area of ham radio.

I do want to thank all I the Amateur Radio community for the benefit it has been to me in directing and guiding all of my professional interests over the past 55 years: All of the way back to the time that my father asked me to come along to code school, to theory school and ending up in my getting my first license.

It has been a great career and I owe an awful lot of it to Amateur Radio. Thank you."
--

Tony England W0ORE: "It was probably in the 9th grade when one of the big blizzards was coming through West Fargo and they sent us home. I remember vividly: My bedroom was up on the 2nd floor. All of the now was blowing by the window and I was playing around with the radio and I was talking to this Pastor at a mission in South America. It was a jungle setting and he was describing what they were doing down there.

And you can imagine what an imagination expanding experience it was for a kid in North Dakota to be able to talk to someone living in the jungle of South America? It was that kind of experience that we were hoping to share when we talked to young peoples groups on Spacelab II through the Amateur Radio system. And it is something that I hope we pass on to other kids.

When maybe one of my granddaughters is a teenager and an Amateur Radio operator I hope that she has the chance to talk to a professional female engineer who is on a spacecraft on its way to one of the moons of Mars. So I hope that all of you keep up this good work and see that this happens. Thank you. (Applause)

--
Al Waller, K3TKJ, was next. He received this years Technical Excellence award for creating qsl.net:

--
Al Waller K3TKJ: "...With that and the insight of the Dayton Hamvention Awards Committee we have certainly legitimized another mode of communication for ham radio. The Internet is not the enemy of ham radio that I have heard professed so many times. It is just another mode of operation.

Today we have hundreds of thousands of QSL users on the Internet. It is a friendly place. The hobby is better for it and I am honestly proud to be a small part of it."
--

Then, the man that everyone was waiting to hear from. The 2002 Radio Amateur of the Year, Hap Holly, KC9RP of RAIN. His closeing remarks brought down the house:

--
Hap Holly KC9RP: "In closing, please allow me to borrow from this years Winter Olympics a familiar international theme that sums up my exhilaration at being selected to receive this award. Simply put: `the year 2002 has truly been my Gold Medal year' in the Olympics of Amateur Radio. I am indeed honored to be chosen as Radio Amateur of the Year by the Hamvention, but also to be the first person with disabilities to receive this plaque. Thank you very much. (Applause)
--

But there was another surprise. This one involved KC9RP, a radio and a company known as Alinco and our producer Bill Pasternak, WA6ITF:

--
Bill Pasternak WA6ITF: "Hi Hap. I'm changing my uniform tonight. I was asked by the wonderful folks at Alinco and ATOC Distributing any by Evelyn Garrison to represent them because they are at a business meeting. But Hap, they would like for you to have...your very own -- brand new -- DJ-196 two meter handheld as their token off appreciation for what you have done and for what you and Stephanie both do. Enjoy it my friend." (Applause)
--

But the surprises were over yet. At least not for KC9RP. When the dinner prizes were drawn, the first out of the barrel was Hap Holly. And in addition to the Alinco H-T, Hap also took home a brand new Icom IC-V8000 two meter mobile and base radio.

So what about those who attended. What do they have to say. As everyone was heading out of the HARA Arena following the close of Hamvention 2002, Bob Sherman, K2SJP, summed it up best:

--
Bob Sherman K2SJP: "Its the best Hamvention that I have been to."
--

K2SJP says that he plans on coming back. Many others Amateur Radio Newsline spoke said the same thing. (ARNewsline™)

**

INTERNATIONAL - UK: ON THE AIR EVENT
Turning to international news, word from GB2RS that members of the Preston Amateur Radio Society are operating GB2COP until the end of May. This, to celebrate Preston being granted city status during The Queen's jubilee year. Activity is on 40, 20 and 15 metres HF, plus 2 metres and 70 centimeters. QSL GB2COP with an SASE either via the bureau or direct to M1KIT. (GB2RS)

**

DX

In D-X, A group of operators from the Kuwait Amateur Radio Society will be active as 9K2F from Failaka Island until the 31st of May. QSL is via 9K2RA either direct or through the bureau. (RSGB)

Also, Team Vertical is heading back to Jamaica for the CQ WPX CW contest. The group will operate from 160 to 6 meters as their home calls slash 6Y5 until the 28th of May. They will participate in the contest as 6Y2A with six full gallon stations. QSL via WA4WTG. (RSGB)

**

THAT FINAL ITEM: THE HAMVENTION THOUGHTS OF W6AQ

And finally this week, another look at Hamvention 2002. This time, through the eyes of a ham who has been to many of them. His name is Dave Bell. His call sign is W6AQ and as Hamvention 2002 was drawing to a close he shared his thoughts with our producer Bill Pasternak, WA6ITF:

--
Dave Bell W6AQ: "This was a great Hamvention. Except for the weather on Friday it was absolutely perfect.

Bill Pasternak WA6ITF: "What was the highlight to you?"

Dave Bell W6AQ: "I think that the highlight for me was the special ARRL dinner on Friday night for donors to the ARRL where we heard Joe Taylor, K1JT, give a really, really interesting talk. He has got a big sense of humor for a Nobel Prize winner, I must say."

Bill Pasternak WA6ITF: "We saw allot of new products here. Anything catch your eye?

Dave Bell W6AQ: "Actually the Yaesu FT-1000 Field I probably would have bought instead of the Mark V if it had come out at the same time. And I must say that getting an FT-817 little radio for under $500 broke my heart because I paid twice that."
--

Hamvention 2002 is now history, but Hamvention 2003 is now less than a year away. Dave Bell, W6AQ, says he plans to be there. So will we, and we hope to see you there too. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, one last call for nominations for our very own Amateur Radio Newsline Young Ham of the Year award. The final date to postmark a nomination is May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Hi There,

I have a TS870 and my mate has the TS2000.

We've compared them and to be honest. The 870 comes out on top for receive.

It's a case of horses for courses.

The 870 is a pure HF rig and all of the common used functions AGC, Power, Key Speed, etc are readily available on the front panel. Whereas on the 2000 they're tucked away in dual function (multi press) buttons.

I like the 870 because once the menu is set to your preferences all you have to do is use it. There are no multi-presses, etc.

Granted the 2000 has more whistles and bells. TNC, 2m, 70cm etc. but at the same time you have decide whether you want to risk putting all of your eggs in one basket.

I lke them both but I prefer the 870.

Cheers Chris.

Greetings Rick,

I agree with Tony about your matching problem.
I would mount the whip antenna at roof height, on a short mast mounted
from the
towing bar. This reduces the coupling to the bodywork, and improves
the DX capability.  For matching I would also consider a base loading
inductor, tapped to match the feedpoint impedance. By using a matching
unit at the base of antenna the transceiver only needs to make small
corrections.  In my case a iron powered core of 1" diameter with about
seven twisted turns in bifilar configuration is fine.  The windings
should have 2 twists per inch, tapped alternative turns after third
turn.

73, Winton, ZL3AO/m

I am looking to find a good quality, 2 and 6 meter radio with a KEY PTT port for connecting a morse code keyer. My price range is $700 or under. I have seen, and am interested in, the one manufactured by TenTec (www.tentec.com). I have scouted the internet looking to see if I can find one slightly cheaper with the same basic features. I want a base, not mobile or portable. I own a Radio Shack model 20-043 omnidirectional discone antenna. I am new to ham radio and have no equipment yet (do police scanners count?!). All help and info is appreciated.

Threat to Amateur Radio

In a recent FM & Repeaters column (July 2001), Bill Pasternak, WA6ITF, recently addressed what
could be the greatest underestimated threat to both our spectrum privileges and Amateur Radio itself.
In the article, "FCC creates new disaster communications system," it tells how the FCC intends to create
thirty-two radio channels that public safety officials would use to communicate between various nationwide
agencies directly.

This, in essence, is designed to remove third party relayers-Amateur Radio operators.

In part 97 Subpart -General Provisions 97.1 (Basis and purpose) the FIRST item listed is as follows:
"(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary
noncommercial communication service, particularly with respect to providing emergency
communications."
To that end, RACES (Radio Amateur Civil Emergency Service) is provided for by FCC regulations
(97.407).

The FCC, by creating and implementing this new 32-channel inter-service communications system, will
ELIMINATE Amateur Radio's PRIMARY reason for existence.

I realize that one of the greatest ongoing debates is whether HAM radio is a service or a hobby.
Well, as I see it, Amateur Radio is (in accordance with FCC regulations) a SERVICE that, to our advantage, has a
hobby side.

You might ask, "Why does it matter whether it's referred to as a hobby or a service?"
My answer is simple.

A SERVICE is publicly viewed as VITAL and a hobby is seen as JUST a hobby.
A hobby, in the public's eye, is done SOLELY for fun and is of no enduring value to society as a whole.

This new 32-channel system, besides being potentially detrimental to Amateur Radio, will require personnel and additional equipment. The additional equipment will require repair and maintenance and personnel will require training to properly operate and maintain the added equipment. All of these things will cost the taxpayers millions of dollars by the time it's fully implemented (tentatively by 2006).

Why 2006? The spectrum that the government intends to use for this system is currently used by broadcasters operating analog UHF TV stations between channels 60 through 69. The government has to first get broadcasters off the frequencies so that reallocation can commence.

A far less expensive alternative to this would be for the U.S. government to openly endorse Amateur Radio.

What are the advantages to endorsing Amateur Radio?

Amateurs are self-trained-no additional taxes for training.
Equipment is amateur owned & operated-no need for added equipment.
Equipment maintained by the operators-not taxpayer money.
Citizen's get involved-no increase in taxes for services.
No waiting until 2006-amateurs are here NOW!

I urge EVERY amateur-ESPECIALLY those involved in public service (NTS, ARES, RACES) to write a letter urging your public officials to REJECT the new FCC decision and to affirm their support of Amateur Radio.

Which public officials would I suggest sending letters to?
Whether by mail or e-mail, I would suggest writing the following:

Senators
Representatives
Governor
FCC (FCC Chairman Michael K. Powell)
President George W. Bush
Vice-President Dick Cheney
First Lady Laura Bush
Mrs. Lynn Cheney
Homeland Security (Thomas Ridge)

Take a moment to write each of the above. Ask them to REJECT the proposed 32-channel inter-service communication system and to fully affirm their support for the use of Amateur Radio instead.

It's economical & it makes good sense.

I recently bought a used 30' tower that came in three 10-foot sections, with a base plate and two brackets to mount to the side of my house. Each section mounts atop the other and they're then bolted together. There's an antenna, that came with the tower, to go on the top.

I can deal with preparing the base and securing the base plate, what I'm wondering about is how to get the sections of tower up? That is, once I mount the first 10 foot section, what's the best way to get the other two up, being as I'm not the strongest person in the world! <g> I can get my roommate's dad to help as long as we have half a clue what we're doing . .

thanks,

Joe W9TXU

The standard method, aside from hiring a crane, is to use a Gin Pole.
It is not a recommended method for the novice - and requires at least
one other helper.

These additional channels are intended for inter-agency communications. Example: Secret Service/FBI/State Police. Ad Hoc networks could be tailored to fit the situation. Comms would be direct, not relayed. Amateur operators do not fit in the picture. Not likely that hams would be given a seat in a Secret Service communications van coordinating advance security for a presidential arrival at an incident scene.

Comms would often be encrypted. Hams are not allowed encryption and even if they were, how would you integrate them into the key distribution system in a secure manner? Fort Meade would cringe!

Training? What? A FEMA employee would hit a button on his console, push mic button, talk. Nothing special about that. An hour to familiarize them with another piece of equipment.

Reliability? In an emergency, how many hams will show up? Can you count on 10 or a hundred? It is an unknown factor and has no role in upper echelon emergency planning.

Amateur radio and RACES will always have a roll in public service but it is seperate from the plan being discussed.

Steve

A few days ago i came across a website that had different homebrewed radios and such. the most interesting thing i saw was a cavity tuned to two meters, and the author used it as a near field reciever. The contraption was built out of a coffee can and had a screw type device at the top to tune it. The only "electronics" was a 1N34 diode. Has anyone else seen something like this or know about this website. Its not really sensitive, the author used it to monitor his repeater. thanks in advance

A 30 foot tower is easily raised as a single unit. With Rohn 25 you typically raise the first 40 feet all together, tie your first level guys in place around the 30-35 foot area, and then proceed to gin-pole your way up. I'd consider mounting the beam antenna/rotator onto the 30 foot section while it is still 'on the ground' and then raising the finished unit. You will need several ~50 ft lengths of good 1/2 inch line of high quality and a few blocks/pulleys. A couple stages of scaffolding will be helpful- these can be rented. Tie off both side lines (those @ 90 degrees to the raising) permanently beforehand, since they will not tighten much at all. Then the crew can concentrate on pulling while one worker has the safety line under complete control, ready to tie off at final position.

40 ft or less we call a 'base'. <g>

To be honest with you, you'd probably be better off getting seperate
radios. The RCI-5054 6m all mode radio (with key port) is sold for
$300 and you can probably find a good quality 2m all mode for $200 or
less. The 5054 is a mobile radio though, not a base like you want.

I think TenTec may be the only company offering a 6/2 all mode right
now, other than the HF/VHF radios, which tend to run quite a bit more
than you're looking to pay.

Dayton was, as usual, outstanding.

The Hamvention was less well attended than those that used to occur at the end of April, but that is a _good_ thing - for us. I'm sure its not making as much money for DARA as those former Hamventions, but the lower attendance meant you could get close to things and see stuff. You could actually get to touch the radios in the big-3 manufacturer's booths without elbowing people or standing in a line for 15 minutes.

I saw maybe 60 % of the flea market by about noon on Friday. Then I came inside and stayed, since I was looking for stuff in there, and then it started raining so going outside would not have been productive - the vendors generally shut down during the rain except those with tents. It was a really cold rain, too, so unless you brought real good raingear and an array of cold weather clothing, you wouldn't have been comfortable.

On-site tickets were $22. Not too bad for 3 days, but much grumbling was heard about 3 things:

1) The programs don't come with the ticket any more - that essentially raises the price of the Hamvention to $27 unless you downloaded all the interesting forum info and vendor map info from the web site (not sure if the vendor map was available on the web).

2) The buses from the mall were $2 instead of free. Lotsa grumbling.

3) The private-owned parking across from the Hamvention went from $5 to $8 a day this year.

Other downers: The big tent at the corner of the flea market was replaced with several smaller tents. These smaller tents didn't have all that the big tent used to - Radio Shack, for instance.

A possible contributing reason for the lower participation - there was hype of extrordinary security measures - "no knives", "bomb sniffing dogs", etc. (I don't go places like that myself - too much hassle, as I routinely carry a pocket knife - and I think such measures are nonsense since many other things can be made into effective weapons) - but then remembered that stuff like that is _sold_ there, so such measures would be impossible - like "no guns" at a gun show... is a 1 1/4" combination wrench a weapon? Sure it is - and of course there was no such extensive security, although there were officers with dogs - they just were never seen sniffing anything. Probably ordinary K-9 units.

The common reason for less attendence that was heard was "ebay".

My take on that is that you aren't going to get a new radio that goes for $899 at the Milwaukee AES for $699 from AES on ebay like you can at the Hamvention. That was an example heard via "on the road" chatter as I was driving back to Virginia.

Conclusion: Dayton is still "The Big One" and is a more user-friendly Hamvention than ones of old that drew 37,000 people. Those were impossibly crowded.

Sounds like an old fashioned crystal diode receiver built for 2 meters.

Interesting.

The guy who had the goat-cam last year traded his goat in for a rooster. Since our tailgate was adjacent to his, we got to make fun of it too.

I purchased one of the first of the new Kanga KK7B R2Pro kits. I'm well aware that although a couple of prototypes of this kit have been successfully built, I'm mostly a guinea pig... I plan to get started on it this week and I'll let y'all know what I think of it.

Fun stuff that lots of folks pointed at: a 25 watt Copper Vapor Laser. No I'd never heard of one before either. I don't have the slightest idea what it's good for except that it was very large and very heavy (large and heavy enough that even a full sized pickup couldn't get it home without a good sized trailer).

For those of you who want to own the ultimate surveillance receiver: AOR was showing their AOR-ONE. It covers 10 kHz to 3.3 GHz multi-mode in 1 Hz steps. They're asking for something like $4k for this beauty. No, it's not blocked for cellular. No, it's not for sale in the USA (wince), without authorization.

I got a kick out of Yaesu's display of the VX-5R --underwater and working! Personally, I'd have added a few goldfish to the tank just for fun...

Lots more to report. Those are just a few hints of the insanity.

73,

Jake Brodsky, AB3A mailto:frussle@erols.com

I heard the receiver is quite LOUSY on the 2000 (particulary vhf).
The 870 is a good radio, I felt the DSP makes things a sound little
"ringy" though.

The TS-2000 has as good or better sensitivity and selectivity figures as
any of the dedicated SAT rigs, and has 5-10 dB better image rejection than
any of them. If the specs are real, then the TS-2000 is as good or better
on VHF than the Kenwood TS-790, Yaesu FT-847, Icom 910, or Yaesu FT-736.
The only SAT rig that I found (so far) that had a better receive spec was
the Icom 970 with receive sensitivity of .11 microvolts, as compared to the
typical .16 microvolts of the others.

(I have been shopping for a new SAT rig... :>)

Yeah, I accidentally left my VX-5R sitting on the car yesterday during a
surprise  rain shower.  Today I worked 2 UO-14 satellite passes with it.  It
works fine.

(WHEW!)

Rugged little rig.

I also enjoyed Hamvention again this year (last year was my first), but....what I found most dissappointing was the apparent lack of interest in scanning/swl. The listener's forum on Sunday AM (not exactly the best schedule slot) had at most about 30 people attend. Out of all those thousands??? The Mobile HF forum, ATV forum, etc were packed.

Are we really such a small group of folks? Also disappointing was the very few used scanners, decoders, etc to be found out in the flea market. Yes, the deals and availability of new, current equipment were good, but where are all the killer deals on older equipment? Scanner Master, Radio Stop, Computer Int, and CAT were present as was Pop Comm. But where was Grove Enterprises, Ham Station, or any of the other great scanner dealers? I would think Monitoring Times could add to their subscription list and so could Scanning USA?

Is there no world class event for listeners?

RV (KD5LJK)

PS: Correction to some of the other posts - the underwater radios were the VX-7R - neat looking rig.

I bet those radios weren't in the water. i remember a display for water resistant watches and saw the man pull them out of a dry tank behind the water. either way, they are supposedly water proof radios and my friend got one there for about 250.00,
I got several good deals, must have brought in 500 bucks worth of stuff for 300 bucks... The best two days I ever spent as far back as I can remember, except for when some idiot tried to lift my wallet...several radios were stolen and some vendors inside had their setup to where they couldnt watch there stuff well and I saw a couple of walk off's there... every crowd has them...

I had previously asked about the VEC-212 with code keyer.  I
understand that I need to get a transceiver with a key port on it but
do not understand if this keyer comes with the "plug" to insert into
the port.  Do I have to buy that seperate and connect the wires to it?

I actually posted this in a reply message in a thread, but thought I'd make
a more general announcement as an invitation to everyone.

I just finished my first ham radio page. Pretty simple stuff, but some nice
links to some of my favorite QRP and Homebew sites amongst other stuff (a
ULS link, and some other good ham radio pages on CW). Included also is a
bit of my ham history (i'm a new ham, so it's a short history! LOL)

Let me know what you think!

Jason - N6WWW - November Six World Wide Web

And for those on IRLP, you can catch me on Node 396

(I'm actually monitoring right now for those hanging out online
It's 4:25pm Pacific 5/20/02 right now)

Oops - my mistake - I was too cheap to buy a program so I didn't have a
definitive list of dealers - just what I saw or recognized from walking
around.

I also failed to mention Universal Radio who I believe show up every year.

I heard Yaesu equipment was selling at rediculously low prices, (FT817 $499.   FT100D $540?).   Yaesu also showed off a new portable/base radio, the FT897.   Looked real nice.

I love Dayton, and living in Cincinnati makes it real easy. I was disappointed. One, I'm getting real tired of the rain and cold. Weather was better when they held it a few weeks earlier at the very end of April.

Ticket prices are too high. No program anymore and increase in parking. No wonder attendance was down. Why charge for the program when the ads they sell are paying for the darn thing to be printed? Next year I wonder what manufacturer is going to pay to run an ad that most people won't see because they are going to fork out money to buy it!

I noticed that the Cincinnati Hamfest has reduced their ticket prices to get people to attend this coming year. They really screwed up moving it from its old location years ago. Used to be well attended. They kept moving it around town so it lost its identity. Nothing like it used to be. I hope the Hamvention folks don't screw up what they built.

Even with the bad weather, flea market prices are too high and the fools won't really negotiate down to reasonable prices for used gear. In some cases it's actually cheaper to buy new.

A lot of vendors that normally attend were missing or hiding real well. No Universal. No Jun's (Ham City) and a few others that usually attend were no where to be found.

The VX7R's were in water. The mics were actually connected and went right into the water so you could use the handhelds if you wanted. Oh, and R&L was selling them for $339.

One reason I think attendance is down is the lack of innovation in products. Much of the stuff is the same old thing with different packaging. I have to commend Yaesu for at least trying and every year they seem to have something new. Icom is talking about some new digital stuff, but I'm sure it is a ways off.

The Ten Tec Orion is nice, but the price is out of sight. Their new long awaited QRP rig started at $595, then went to $695 and now they are taking orders for an August delivery at $795! Too much money, not enough rig.

SGC used to have a good rig with the 2020, but I noticed they screwed that up and changed the fixed SO239 on the back of the rig to a pigtail. Another component to fail. Also they took away the power plug and now have a pigtail for the power lead. Yikes, on an HF rig?

APRS is really growing in popularity and there was a really nice APRS exhibit. People think it is only for tracking but there are a number of capabilities that make it very useful, fun and interesting.

Special note to the vendors. Try to look excited about your products when folks stop by to check out your products. I have a fortune in Kantronics gear so I stopped bu to chat. Early on Friday so they could not have been that tired yet...well I asked about intelligent tracking (APRS) for the KPC3+. Got a ho-hum answer that they're not going to do anything.

Hats off to the Yaesu gentleman (Japanese) that greated me when I went to get my free hat. I was carrying the FT-1500 box in my hand as I went through the line. He looked at the box and said "thank you very much" with a smile on his face. Now there is a man that made me feel good about buying his product.

One last gripe...get rid of the non-ham, non-computer vendors...are you guys that desperate for money? Just how many sunglass vendors do you need at a radio/electronics/computer show? And enough of the trinket vendors.

I just wish the Dayton folks and the vendors will sit down and talk about improving this event before is declines to the point where they can't get their audience back.

Of course many of the ills can be cured with more hams.

I opted not to buy a program also. Considering I bought a MKIIG for $699 I
probably should have.

Hi again Doug

You will have to attach your own connector to the key.
As I mentioned before the VEC-212 is connected to an oscillator.
You will have to disconnect it and install a plug to match whatever radio
you
purchase.

I currently have for sale a variety of older radio-related books. Postage is $2 for the first book, and $1 for each additional item (Media Mail within the US, at cost elsewhere). The books are:

"The Radio Amateur's Handbook, The Standard Manual of Amateur Radio Communication" 47th Edition, published by the American Radio Relay League, 1970. The 600+ page softbound book is in good condition. There is a 4 inch tear along the rear cover spine, and a few bent page tips, and a brown magic marker smudge on the page ends. Internals are clean with no page tears or pen marks, and a strong binding. A good vintage reading copy. Available for $6.

Terman, Frederick Emmons "Radio Engineering" published by McGraw-Hill, 1947. Third edition. The 969 page hardbound book is in very good condition, clean with no page tears or pen marks except for a previous owners name and address inside the front cover. Strong binding and very clean covers. A thorough treatment of radio and communications including ultra-high-frequency and microwave techniques. A very nice copy. Available for $15.

"Reference Data for Radio Engineers" Second Edition, published by the Federal Telephone and Radio Corporation in 1947. The 322 page hardbound book is in good+ condition. Clean with no page tears or pen marks except for a previous owners name and address inside the front cover. "The present edition has been greatly enlarged and a subject index included. Chapters on transformers and room acoutics have been added. The material on radio propagatiion and radio noise has been revised. The data on cathode-ray tubes have been considerably expanded." Available for $9.

Everitt, William Littell "Communication Engineering" published by McGraw-Hill, 1937. The 727 page hardbound book is in about very good condition. Clean with no page tears or pen marks except for a previous owners name and address inside the front cover, and a few passages underlined in pencil. A nice early text on the science of the radio. Available for $9.

Measurements Development Laboratory of the Sperry Gyroscope Company, "Microwave Transmission Design Data" published by the Sperry Gyroscope Company, 1944. Publication No. 23-80. The 215 page hardbound book is in very good condition, clean with no page tears or pen marks, and a strong binding. Originally issued during WWII as a "confidential" document. Chapter topics include General formulae for concentric lines; Attenuation in concentric lines; Reflections and impedance matching; General formulae for wave guides; Attenuation in wave guides; Reflections and impedance matching in wave guides; Wave guide tees and bends; Wave guides filled with dielectric material; Dielectric material: Cavity resonators; and Measurement techniques. A neat early book on ultra-high frequency radio waves. Available for $7.

Massey, H.S.W. and R.L.F. Boyd "The Upper Atmosphere" published by Hutchinson of London, 1958. The 333 page hardbound book is in good+ condition. It is an ex-library copy from a corporate library, with a card pouch inside the rear cover, and the usual stamps and stickers. The rear inside hinge is split, but the cover is securely attached. Otherwise in decent condition. Available for $6.

Hall, Gerald L. (editor) "The ARRL Antenna Compendium (Vol. 3)" published in Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1992. ISBN: 0872594017 The 236 page softbound book is in fine condition, fresh and clean inside and out. Lots of useful information on radio antennas. Available for $7.

Erwin, David G4LQ1 "HF Antenna Collection" published by the Radio Society of Great Britain, 1994. ISBN 1872309089 The 233 page softbound book is in fine condition, fresh and clean inside and out. Lots of useful information on radio antennas. Available for $7.

If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks.

Dave

Where's global warming when ya really need it, huh?

>Weather
>was better when they held it a few weeks earlier at the very end of April.

Disagree. Been going since early 70's. I got rained on a _lot_, and
it was almost never a warm rain.

>Ticket prices are too high.

Try going to Kings Island if you think this is high, and the
Hamvention is better.

>No program anymore and increase in parking. No
>wonder attendance was down. Why charge for the program when the ads they
>sell are paying for the darn thing to be printed?

I noticed a lot _less_ ads in it. Mfgr attendance was somewhat less,
too, so there were fewer of those to place the ads. CATS, the guy
that repairs the rotators wasn't there. The guys from Indy selling
software weren't there, either. The big Radio Shack salespoint in the
big tent in the flea market wasn't there, and neither was the tent.

>Next year I wonder what
>manufacturer is going to pay to run an ad that most people won't see because
>they are going to fork out money to buy it!

Fewer. Charging for the program _is_ a mistake, I think, but not a
deterrence to me. Heck, I drove 1100 miles round trip for this - an
extra $5 doesn't even show on my radar screen.

>I noticed that the Cincinnati Hamfest has reduced their ticket prices to get
>people to attend this coming year. They really screwed up moving it from
>its old location years ago. Used to be well attended. They kept moving it
>around town so it lost its identity. Nothing like it used to be. I hope
>the Hamvention folks don't screw up what they built.

Ebay is said to be screwing up the Hamvention the most, and probably
the Cincinnati event as well.

>Even with the bad weather, flea market prices are too high and the fools
>won't really negotiate down to reasonable prices for used gear.

I saw a real nice roller inductor go for $20, after the guy had wanted
$30. I got an LS-120 superdisk drive for my computer for $35 in the
flea market. 6 split nuts to hook up ground wire for $0.25 a pair -
try to find those at Lowes or Home Depot for that price - forget it.
Flea market is OK by me. You may have run into a few people with gold
fever...

>In some
>cases it's actually cheaper to buy new.

People pay over retail on ebay all the time. Go figger.

>A lot of vendors that normally attend were missing or hiding real well.

Yep.

>No
>Universal.

Universal was there - the store and the tower manufacturer - store had really small booth tho.

>No Jun's (Ham City) and a few others that usually attend were no
>where to be found.

I think the attendance was probably less than 20,000. You need more than that to draw the smaller players.

>One reason I think attendance is down is the lack of innovation in products.
>Much of the stuff is the same old thing with different packaging. I have to
>commend Yaesu for at least trying and every year they seem to have something

>ways off.

I like the new TS-2000 Kenwood - I have one out in the Jeep right now...

>APRS is really growing in popularity and there was a really nice APRS
>exhibit. People think it is only for tracking but there are a number of
>capabilities that make it very useful, fun and interesting.

Yes, even I noticed APRS this time. First time I found out that you don't need a computer in the car to use it. Any explanation of APRS you read starts out with mapping software, etc. which leads one to believe you need a computer in the car. For that reason, I wasn't interested. Now, however, I'm thinking my old HT would make a good APRS xcvr. Just wonder how I can carry on a regular 2 m QSO with that thing also blatting in the near vicinity. Duplexer?

>Hats off to the Yaesu gentleman (Japanese) that greated me when I went to
>get my free hat. I was carrying the FT-1500 box in my hand as I went
>through the line. He looked at the box and said "thank you very much" with
>a smile on his face. Now there is a man that made me feel good about buying
>his product.

I think I would have liked such an experience too.

>One last gripe...get rid of the non-ham, non-computer vendors...are you guys
>that desperate for money? Just how many sunglass vendors do you need at a
>radio/electronics/computer show? And enough of the trinket vendors.

Well, I'll take _any_ income to the Hamvention that supports it. We could lose it, ya know! Hara Arena can't be cheap to rent. The flea market _wasn't_ sold out from what I could see, and the inside had space too. If you didn't have the sunglasses bunch there, then you'd have bare pavement not contributing anything, and the ticket price to get in would likely go up some more.

>I just wish the Dayton folks and the vendors will sit down and talk about
>improving this event before is declines to the point where they can't get
>their audience back.

I can't see anything they've done that could be construed as a fault. I believe that all the higher prices are likely necessary to keep the show going at all. I think that they should maybe have tacked on $2 or so to the ticket price and gave a free program with it instead of what they did - that would have eliminated the loud and obnoxious, in 1 case at least, people selling the programs, as well as the unlikelyhood that those sellers were doing it for free. They probably got $1 or so out of each one.

>Of course many of the ills can be cured with more hams.

Kill ebay and we'll talk... <GGG>

Apparently there have been some nameserver problems for the site. I can reach it easily from home via my ISP, but it can't be found at all if I try to access it from at work using milnet. It isn't blocked or filtered (those give different errors) it is just a matter of the nameserver not finding any record DNS record to convert the URL to an IP address.

You might try entering the IP 216.167.96.124 directly to see if you can reach the site that way.

Maybe the way around it is to have some e-bay auctions on site. Bidders could view the stuff, then run back to their laptops (or nearby computer kiosks) and put in a bid. The auctions could run 2 to 48 hours.

Laugh about it, but time will come when you will get outbid by somebody using a
PDA and Bluetooth standing right behind you. The dealers would love it.

I have a couple cheap Uniden GMRS radios (.5 watt)

It is my understanding that GMRS can legally be used at 2 watts.

Is it possible to change that to a 1 or 2 watt transmitter? I'm not afraid to use a soldering iron, and have quite a bit of experience doing so, but have little experience with radios.

I'm not worried about battery use, as I will be using rechargables and will also be using the radios attached to a vehicle most of the time.

Hey Hams,

On my ham page I added a really slick message board that some of you may enjoy. If anything, it's fun to look at the really neat interface.

Anyway, I tossed a couple of messages on it. It's there for all to enjoy.

http://n6www.cjb.net

Click on Message Board near the top.

Let me know if there are any other discussion sections you'd like me to add to the page.

I also have liks to ULS, IRLP, Homebrew, QRP, and ham training sites for those interested in seeing some of the fun places I've found along the way.

Also, I'm hanging out on IRLP node 396 for anyone looking to say hi! It's about 10:30pm Pacific time on Tuesday May 21st... I'll probably be on for another hour or two. It would be fun to hear anyone's take on my new pages. I'm not a webmaster, so I'm learning.as I go...

73's

Jason - N6WWW - I'm 404 lol

I'd never buy radio gear on E-Bay.
All E-Bay represents is a "feeding frenzie"
type market for ham gear. What I see people
paying for ham gear on E-Bay leads me to
belive that there's an awful lot "shill bidding"
going on. Something that I would not put past
some of the so-called "private dealers" that
I used to see travelling to all the hamfests
like gypsy traders. You know, the guys that
buy up all the honest bargans offered for new
hams by the old-timers, that show up an hour
later on their table or on E-Bay for double the
price or more. Buy used ham radio equipment
on E-Bay...?? Anyone who does so should have
their head examined.

Yes I hope they are. I went up to the DARA booth and asked where the booth was for the scooters and they told me they didn't know. Didn't they put the show together? Then when you asked anybody else they tried to sell you a program for $5. Very Sad. I hope they learned something this year. Maybe the big companies should find a new place to have the ham fest. Somewhere that it will be about getting hams together to buy and sell radios, and share ideas and not about how much money they can make putting on the fest. To bad it has become only a money making project for them.
Atleast people like Icom and Yeasu were having some good sells. I too was getting tired of people saying I can get more then that on Ebay. Maybe those sellers should stay home and hide behind their computers because I'm not going to pay Ebays high prices.

Sorry just my 2 cents worth

But maybe I could get 3 cents on Ebay!!! HA HA HA HA

Never ceases to amaze me how cheap some hams are. Who gives a rodents behind about a program? Besides if you paid to get there and got a room what's a few more bucks for a program. I wonder how many get tossed or end up on the ground when they were free? Its called capitalism, and maybe with more and more gray hair in amateur radio, DARA had to do something to recoup their losses. I noticed the crowds to be WAY DOWN. AES had great deals, I bought two VX-1R's, they were $99 each!!! Just hope that we have bands to use all this gear on in a few more years. I have been to Dayton several times, and don't worry about the weather either. Be smart and bring the right clothes. Obviously there were several gonads who walked around with shorts on and tee shirts, probablly in the hospital now. They looked real cool!!! Didn't see the chicken cam, but did see the goofball with the tower on his head!! Always fun to people watch, can't wait to bring my newly licensed wife, she will be laughing all weekend next year!! Still the best hobby on earth...

Does anyone have a manual for the ICOM 3200 dual band 144/440 mobile radio?
I just aquired one at a yard sale and need the manual to program the bugger,
especially the PL tone table.

Scans are ok in JPG, MAX, etc formats are ok.

Thanks in advance.

Hi there,

I don't know if I'm in the right forum, but I'm looking for a mini transmit receive combo. The idea is this:

I have a motorcycle helmet that has a built in headset, and an FRS communicator radio attached to the outside of it. The radio has a pass-through for an audio input (cd player, fm radio, mp3, etc). What I want to do is be able to mount my mp3 player to the front of my bike and wirelessly xmit the signal to the frs radio, rather than swing a cord up to my head.   In my ideal world, there'd be a small dongle that plugs into the mp3 player mini-jack that transmits to another small dongle that plugs into the communicator on the helmet.

I've seen the Kima Link It unit, but it transmits to an FM radio, meaning I'd have to add an extra layer yet to the mix that I want to avoid.

Anyone have any ideas?

regards,

Paul

```

I am assembling a team for Field Day 2002.

I could use a few more operators - CW especially.

Location is in the heart of West Springfield in Fairfax Country in a Church's backyard. I intend on making the most of the promotional points using this location. Boy Scouts (and perhaps Girl Scouts) will be helping out too.

If you have a few hours to spare for Field Day this year, but do not have the time for full-up Field Day preparation why not just contribute to our team.

Email me if you are interested.

John

You should go and look the Vertex Standard Japan website. It takes a while always that the product information is updated to the US / UK Yaesu website.

http://www.standard-comm.co.jp/Products/amateur/vu_handie.html#

I don't understand japan but there it is. The newest products are usually published at the Japan website, as they are a japanese company...

Yaesu hardly ever updates their website here in the US. Real disappointment. They have had notes on their website promissing things to come for over two years. Last update was the FT-817 over 20 months ago.

Check out http:/www.rac.ca, become a member as well. There is always
an ad in the magazine for ve7??? who has qsl cards. There are several

programs available to design your own as well. I would send you the
email address of the ham in BC but I can't find my latest magazine. If
you are in the Toronto area, check out Radioworkd on Steeles ave. by
the 400. They sell the RAC magazine AFAIK.
If in Ottawa there is the RAC headquarters.

Good Luck

John

Hello, Vipul Shah, KB1HMW here. I might be taking summer courses in Maryland
(if I get accepted). Any Hams interested in doing a summer design project or
design study in the rf area? Perhaps towards Amateur Radio certification? I
currently am in Massachusetts.

A site that has not been updated in months is good?

Why not send a message to them via whatever email address they list on the site and tell them?
It's too bad, your such a smart person.

I have a pile of Popular Comm. a & Monitoring times Magazines kicking around. Some in well, used condition, most are in excellent condition.

I am wondering is there a market for these out there, cause if so, I'll stick them up in an auction. If not. I'll trash them.

What type of Price is good for a whole Lot of these mags.

about 53 mags in total. I think one is dating back as far as 98??

Maybe I'm missing something but it has the May and June issue index, the airshow page has the fact that the Ottawa, Canada show is in doubt due to the cost of insurance (this was only announced a couple of weeks ago).

Just what is it that is out-of-date?

Dave

It must have just been updated. Because I've been checking it regularly,
and it hadn't been updated. I now look and see that it is.

Case closed.

I don't know what site you are looking at but the Monitoring Times
website current issue is May 2002. I just checked it.

Are you looking at http://www.monitoringtimes.com/ or some other place?

The magazine is published by Grove. Why to you think every glowing review of a product or product announcement is accompanied by a Grove ad for the same product?

I admit I'm no electronics expert by any means, so I humble myself before
you learned ones...

I'm connecting the 8 Ohm speaker output jack from a handheld radio to the
"line in" on my computer, and the sound is a bit distorted. How do you
turn an 8 Ohm speaker output to a line level output?

Thanks!

Use an audio matching transformer to go from the 8 ohm speaker impedance to the line input 2K (approximate) impedance for best sound fidelity. Also, you will need to add some resistance (or use the volume controls) to

attenuate the speaker signal level down to the to the line input level to
eliminate the distortion. You can probably find the necessary parts at your
local Radio Shack store...

This mike has part # 19-1125 printed on the back. It has the keypad on the front and has the 8-pin connector that looks lile a computer network connector.

I don't really want one that works poorly or has the letters worn off.

Reply to marz@t4x.com, but you must change the letter 'z' to a 'k', and change the letter 'x' to a 'p'. The email has been deliberately written wrong in order to prevent filthy scumbag spammers from getting my real email address.

Amateur Radio Newsline™ Report 1291 - May 10th 2002

Amateur Radio Newsline™ report number 1291 with a release date of Friday, May 10th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth returns to Earth after his ham radio odyssey in space. This story is first on Amateur Radio Newsline report number 1291 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: MARK SHUTTLEWORTH RETURNS TO EARTH

South African space explorer Mark Shuttleworth was greeted with Easter eggs and cake as he returned to earth on Sunday May 5th, This, after a ten day stay on the International Space Station that he called unforgettable. And ham radio operators around the world will remember his trip for a long time as well. Amateur Radio Newsline's Roy Neal, K6DUE, has the wrap-up on Mark Shuttleworth's ham radio space odyssey:

--

"Every second will be imprinted and will be with me for the rest of my life."

Those were the words of a happy Mark Shuttleworth as he was carried away from the Russian Soyuz capsule that brought him and two fellow passengers back down to earth in Kazakhstan on Sunday, May 5th at 7:51 a.m. Moscow time. Before his return to Earth, Shuttleworth delighted hams around the world when he showed up on the air and made numerous random contacts. In short order he was working them like a D-Xpedition pro. Listen:

--
contact audio here
--

That recording was supplied by Stan Vandiver, W4SV. We compressed it to give you a glimpse of the way Mark Shuttleworth took to ham radio and the way that ham radio welcomed him.

One ham lucky enough to record both sides of his contact with Shuttleworth was Al Lark, KD4SFF. Using the Experimenters Group Amateur Radio Club callsign N4ISS mobile, Lark spoke with Shuttleworth on May 1st at 9:20 A-M Eastern Daylight Time:

--
Contact audio here
--

According to Lark, that contact was made from his work van during coffee break in downtown Greenville, South Carolina.

Mark Shuttleworth's operation from the International Space Station was made possible by ARISS. Amateur Radio on the International Space Station. Amateurs from nine countries, in the USA, Russia, Japan, Europe and Canada, have set up ARISS, to design, build, maintain and supervise all operations of the amateur radio station aboard the ISS,

For the Amateur Radio Newsline, Roy Neal, K6DUE.

--

Shuttleworth is the second person to pay Russia for a trip to the I-S-S. The first was U.S. businessman Dennis Tito, KG6FZX, who travelled to and operated from the space station a year ago. (ARNewsline™ with audio supplied by W4SV and KD4SFF)

**

HAM RADIO IN SPACE: THE OTHER HAM IN THE CREW

Almost lost in the shadow of Mark Shuttleworth is Italian Astronaut Roberto Vittori, IZ6ERU. Vittori was a member of the crew that brought a new Russian built Soyuz escape vehicle and explorer Mark Shuttleworth to the ISS. And while on board the space station, Vittori also took to the air in his native Italian using the ARISS station:

--
Vittori audio here
--

That recording was made by IT9GSV as Vittori was flying over Rome. Among the other contacts Vittori made was one with a school in the town of Malignani on May the third. (Tnx: IT9GSV, IK1SLD via SAREX Remailer)

**

HAM RADIO IN SPACE: TEEN IDOL MAY BE NEXT SPACE TOURIST

The next space tourist to visit the International Space Station could be a teen heart-throb. Lance Bass, one-fifth the teen pop group *NSYNC, says that he has passed his first battery of tests in his effort to fly into space on a Russian spacecraft later this year.

In a recent television interview, Bass said he is attempting to keep time free during the bands current tour so he can participate in additional medical tests in the U.S.. If they go well, Bass says that he will be heading back to Russia to see if he can qualify for a fall mission to the ISS.

Bass was in Russia last March to undergo an initial series of physical tests. The 22-year-old pop singer's is attempting to qualify for a seat on the Russian mission that's set to launch on October 22nd and return to earth on November 1st. If Bass is approved to fly, it is not known if he would have time to study for a United States Amateur Radio license or if he would be interested in using the ham gear on board the ISS.

By the way, the same news report says that Bass' trip to the Star City Cosmonaut Training Center was paid for in part by Radio Shack. Last year Radio Shack filmed a television commercial aboard the international space station. (Published news reports)

RESCUE RADIO: AMATEURS MUSTER FOR WEATHER EMERGENCIES

The ARRL Letter says that Amateur Radio Emergency Service teams activated or stood by to assist as severe weather struck several states in late April. The National Weather Service said storms over the weekend of the 27th and 28th left pockets of devastation from Kentucky to Maryland. Amateur Radio Newsline's David Black, KB4KCH, picks up the story from here:

--

La Plata, Maryland was hit hard April 28th when an F5 tornado roared through the town's business district. This time, the agencies that normally help during disasters were themselves hit. The local American Red Cross chapter office and a building housing the Charles County Emergency Operations Center were damaged.

Tom Abernethy, W3TOM is ARRL's Maryland Section Manager. He says Michelle Sack, N3YRZ, who was on duty at the LaPlata hospital broke into a SKYWARN net to report a tornado. Sack reported a the massive storm was only one-half mile away to the west and heading directly for her location.

Sack tracked and described the tornado until it struck and then continued to provide on-the-scene assessments. Other amateurs along the storm's track also provided reports on severity and damage.

Mike Tackish, KA3GRW is the county's ARES Emergency Coordinator and RACES officer. He activated the local ARES and RACES team's emergency operations. Hams set up a command and control net on UHF, and used VHF channels to supply communications for the hospital which lost telephone service and internal communications. Hams also helped the Red Cross with communications.

Hams were also busy helping the National Weather Service as the agency conducted a follow-up investigation of the tornado which had winds of around 260 miles an hour.

Also on the same date, hams in Kentucky were busy when severe weather struck that state. Radio amateurs used a wide area repeater net to relay important information to help the Weather Service and the Meade County Emergency Management Agency.

Weather service forecasters wound up issuing a Tornado Warning based on reports from radio amateurs. One person died, with homes in the Irvington area being damaged or destroyed. Nearly a dozen hams assisted with communications.

In Erie, Pennsylvania, hams were providing communications for a March of Dimes 9-mile walk April 28th, when severe weather prompted them to activate a Skywarn Net. Buildings were damaged at Erie International Airport--trees and power lines were knocked down, but no injuries were reported.

For the Amateur Radio Nrewsline, I’m David Black, KB4KCH.

--

Thats not the end of it. On April 24th, tornadoes struck Butler, Carter and Madison counties in south-eastern Missouri. More than 100 homes were damaged or destroyed. ARRL Missouri Section Emergency Coordinator Patrick Boyle, K0JPB, said ARES teams and individual amateurs remained on standby to assist if needed during the recovery effort. (ARRL Letter)

**

RESCUE RADIO: HAMS ASSIST IN NEW MEXICO FIRE COMMS

Amateur radio played a significant communications role in fighting the New Mexico wildfires. According to Jay Miller, WA5WHN, both Otero and Lincoln Counties were affected. Albuquerque was linked to Benson Ridge neat Alamogordo via the W5BI remote base with support from stations in Roswell and Ruidoso. This in support of the Red Cross and other agencies. Also, the 146.74 and 145.23 MHz repeaters plus 3.939 MHz Lower Sideband were in use.

The Red Cross had set up a shelter in the city of Cloudcroft. During the blaze several hams were forced to out of the area because they were in the path of the fire. They were located in a recreational vehicle in a near-by campground. (WA5WHN, ARNewsline™)

**

RESCUE RADIO: PHONES FAIL IN UK AND HAMS CALLED OUT

The United States is not the only place where radio amateurs have been busy. Ham radio operators who belong to the emergency service group Raynet were also called up after the telephone system failed in one area of the United Kingdom. Jeramy Boot, G4NJH, in Nottingham has more.

--

A major failure of the telephone system in south-west Hampshire and part of Wiltshire occurred during the evening of the 25th of April. At 2030, Bob, G4VWP, received a call from the Duty Emergency Planning Officer for Hampshire, requesting that Raynet be put on standby, ready for callout should the need arise. Later another call was received asking that, if required, Raynet should set up a VHF communications link between the police Command and Control Center at Netley and police HQ in Winchester.

Thirty-four members from four groups indicated that they were available for callout. The Forward Control Land Rover and 60-foot mobile tower were collected from storage and a portable mast, radio, power supply and associated equipment were made ready to take to the police headquarters.

The callout was led by Clive McCloud, G4EFB, Roger Davies, G8SXC, John Witts, G6BBW, Ian Duffy, G7GMN, and Dave Minett, G6DJA.

Jeramy Boot, G4NJH in Nottingham.
--

Eventually it was found that ham radio assistance would not be needed. Raynet members were dismissed at 23:10 UTC. (GB2RS)

**

ENFORCEMENT: FCC DOWNGRADES SIX TECHS

The FCC has notified six Technician class hams that they have been downgraded to no-code Technician status. This, as a result of an audit of a May 2000 ARRL V-E-C administered exam session in Statesboro Georgia. The FCC’s Riley Hollingsworth says that the problem was not the applicants but rather the test itself:

--
Hollingsworth: “We found that in that session the code exam had also been used in teaching the classes and in the practice exam. The same code exam -- that is. We called in eight for a code retest. Two appeared and passed but six did not show up.”
--

Hollingsworth said that the variances in the exam procedures were not the fault of any of the upgrade applicants and in no way reflect on them. However, they must first pass a valid Morse test before they can be granted the privileges of a Technician class license holder who has passed the code. (FCC, RAIN)

RADIO RULES: FCC CONSIDERS NEW SATELLITE INTERNET ACCESS SERVICE

The FCC says that it will consider rules for a new service capable of providing broadband Internet access via satellite. According to the CGC Communicator the FCC Commissioners will consider issuing a Report and Order and Further Notice of Proposed Rulemaking to implement sharing among multiple licensees in a new service capable of providing broadband access to the Internet using non-geostationary satellites operating in the KU band. (CGC Communicator)

**

RADIO LAW: CALIFORNIA LAWMAKER SEEKS CELL PHONE BAN

A California lawmaker believes that two cellular telephone related car accidents may bring attention to his efforts to ban drivers use of cellular telephones and other hand held communications devices. Assemblyman Joe Simitian says it is time to ban these apparatus in the name of public safety.

New York State already has made it illegal to use a cellular telephone while driving unless it is attached to a hands free device. Other states are considering similar legislation. In California the idea has been defeated every time it has been brought to a vote, but Simitian believes that the recent series of accidents will bring a vote in favor of his proposed across the board ban. BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

AWARDS: MC GAN NOMINATIONS DUE MAY 24

The ARRL says that nominations close May 24th for the Philip J. McGan Memorial Silver Antenna Award. The annual award honors an amateur who demonstrates outstanding public relations success at the local, state or national level on behalf of Amateur Radio, and who best exemplifies the volunteer spirit of the award's namesake.

The award is named for the late journalist Philip J. McGan, WA2MBQ, the first chairman of the ARRL's Public Relations Committee and an enthusiastic Amateur Radio booster. To obtain an entry form for the Philip J. McGan Silver Antenna Award, contact Jennifer Hagy, N1TDY by e-mail to jhagy@arrl.org (ARRL)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT FOLO

Last week we reported that the Kolibri-2000 Russian and Australian School Scientific Research Microsatellite was slated to deorbit sometime between May 3rd to the 4th U-T-C time. WE also suggested that you might want to have a tape recorder on the satellites primary or secondary downlink channels.

Well if you did, and if you caught the last transmissions from the Kolibri we could like to get a copy and so would Miles Mann, WF1F, of MAREX. You can contact Miles for shipping instructions by e-mail to wf1f@attbi.com. Amateur Radio Newsline can be reached at the address you hear at the end of this weeks report. (WF1F, ARNewsline™)

**

HAM RADIO IN SPACE: AMSAT-NA SPACE SYMPOSIUM

The 20th Space Symposium and AMSAT North America Annual Meeting is scheduled for November 7th to the 11th in
Fort Worth, Texas. The meeting will chronicle recent and future Amateur Radio satellite technology developments and including an Electronic Surplus Stores tour on November 7th. Also slated is a Field Operations breakfast, a tour of the Lockheed Martin Aerospace Company and the all important actual AMSAT North America Board of Directors Meeting November 10th The 2002 event chairman is Keith Pugh, W5IU. (ANS)

**

INTERNATIONAL-UK: NEARLY 2300 FOUNDATION LICENSES ISSUED

According to the latest statistics from the United Kingdoms Radiocommunications Agency, as of the 18th of April, some 2283 of that nations Foundation Licences had been issued. This figure is made up of 1582 Full and Intermediate Class B’s taking the Morse Assessment and 701 individuals taking the Foundation Course.

Of those 701 completely new entrants to amateur radio, 226 - or 32 per cent - are under the age of 21. After only three-and-a-half months, these figures are being seen as a great success and thanks are due to the many radio clubs and individuals who are giving their time in order to provide Foundation Courses and Morse Assessments. (GB2RS)

**

DX

In D-X, word that Arliss Thompson, W7XU, and a few of his ham radio friends will be operating a 6 meter station from St. Paul Island in grid square FN97 from 29 June to 8 July. Thompson says that the group plant itself on 50.157 MHz and remain there for the duration of the DXpedition. Both CW and SSB operations will take place on that frequency although they may run split if they get a very good opening. The station will have a breakable beacon also on 50.157 MHz that will be running during slow times. QSL to W7XU. (W7XU)

Edisher Giorgadze, P5/4L4FN, has returned to North Korea. During a stop-over in Beijing, Edisher collected an Ameritron AL80A amplifier that was donated by Martti Laine, OH2BH, Bernie McClenny, W3UR and Al Baker, W5IZ. In his first contact using the increased power he contacted K4SSU who told him he was S-5 barefoot at 100 watts but an amazing 10 db over s 9 with the AL80A in line. He days that this basically guarantees more QSO's from the skylines of Pyongyang. Especially since he has extended his contract and will be in North Korea through June of 2003. Also, now that his operation is fully accredited by the ARRL a full-color QSLs has been released by his QSL manager, Bruce Paige, KK5DO. (KK5DO)

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

And finally this week, we hear once again to hear from our support fund administrator. Here's Andy Jarema, N6TCQ.

--

Yes, this is Andy Jarema, N6TCQ, Chief Financial Officer of the not-for-profit organization you know as the Amateur Radio Newsline. And once again, I am using the single word -- HELP! If you value this service, please help.

Let me start by saying that we really appreciate the individuals who give of themselves, but we don't hear from enough clubs. There are literally thousands, perhaps tens of thousands of traditional radio clubs and repeater clubs out there. These are the wonderful folks who re-transmit our broadcasts, bringing your nets increased value, and giving your members the latest in Amateur Radio news and information to enhance their hobby.

But Amateur Radio Newsline cannot continue without the funding needed to pay the monthly bills. And right now, we can't.

In the quarter century that it has existed, no one at the Amateur Radio Newsline has ever taken a salary. We all volunteer our time and talents. But we ARE faced with are monthly expenses for gathering and delivering the news to YOU! We are talking telephone, Internet access and the like. This hasn't changed.

We are also talking about the money we spend each year to help insure the future of Amateur Radio through the Young Ham of the Year award program. Yes, Vertex Standard, C-Q, Dave Bell Associates and Rosewood cover the expenses and gifts for the recipient. They do not cover the administration expenses. That's out part and it ran close to $1200 last year.

The bottom line is this. I am asking that you try to find it within your organization to continue this service. As we have said before, whether Amateur Radio Newsline continues to provide this service or if it disappears is totally your decision. We are here to serve you for as long as you want us. You response the next several weeks will provide the answer.

The address for the Amateur Radio Newsline, Post Office Box 660937, Arcadia California, 91066.

Looking forward to hearing from you really soon, I’m Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Less than three weeks from now. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™. Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's™ only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, in New Orleans saying 73, and we thank you for listening." Amateur Radio Newsline™ is Copyright 2002. All rights reserved.

>Use an audio matching transformer to go from the 8 ohm speaker impedance to
>the line input 2K (approximate) impedance for best sound fidelity. Also,
>you will need to add some resistance (or use the volume controls) to
>attenuate the speaker signal level down to the to the line input level to
>eliminate the distortion.

This is a pretty standard approach, and I don't mean to be critical, but I'd just like to point out that the matching transformer is probably not necessary, so in the interest of simplicity I'd try first adjusting the line-input level (as suggested above and in a previous posting).

Many people seem unaware that an impedance mismatch in itself does not cause distortion, even if the mismatch is huge. The main problem introduced by an impedance mismatch is loss of power, but in this case, where the signal is larger than necessary even given the mismatch, that is not a consideration.

Hope this is of help.

I have FOR SALE a MINT YAESU FRG-9600 VHF/UHF Communications Receiver. This is an awesome unit that covers 60-905 mhz, ALL MODES (AM-N, AM-W, FM-N, FM-W, USB/LSB. Has 100 memories, TRIPLE CONVERSION, VFO, clock, timers, multi color signal strength meter and MUCH MORE! This radio covers it all! NO BLOCK IN

FREQUENCY COVERAGE! CONTINOUS COVERAGE! This is commercial quality, and is in
MINT - near NEW condition! If I had the box, you would think that it is new!
Included is the radio, mobile mounting bracket (NEVER has been mobile), DC
Cable, Wall-Wart Power Supply, Telescopic Antenna and Manual. I cannot stress
the quality of this radio. You will be very happy with this. I am asking $400
INCLUDING Priority Shipping in the US. Please email with any questions!
Thanks!

Thanks. Any idea where I could find a schematic for such a thing? What is
a circuit like this called (so I can do a search on it)?

Thanks a million!

Hi, guys and gals.

Got a question/problem. I have a TS-50S, HUSTLER MO-2 and HUSTLER 15M radiator on top of the MO-2. Fantastic ground with Solid Copper bar attached firmly to the chassis. RG-8X at 15' long.

Problem -- Very Hight SWR at just over 2.5:1 with the fancy meter gizmo HRO has. Nothing will get it down, no adjustments longer or shorter.

Antenna is mounted at about 1.5-2" from right rear corner of the vehicle. Vehicle is a 2002 Saturn VUE (SUV). Base of antenna/mount is level with the bottom of the bumper. Radiator connects to the MO-2 at top of vehicle height.

Suggestions? The easier the better. If there's a way to fool it, I'll do it. If it means buying a 'match box' sorry, won't do it. It probably won't hurt the radio, but it ain't right.

Oh, the RG-8X is run along the inside of the vehicle, down the passenger side to the cargo compartment. This is also the same side as the antenna.

Also, the RG-8X is run (cargo compartment) from the floor height up about 16" and back down to the bottom of the hatch area before extending from the vehicle just above the antenna mount by about 14".

Thanks, guys and gals. Have a pleasant day,

V/R
RickyDee

You may have to try some shunt-C across the feedpoint of your antenna to ground to fix your SWR problem through "impedance rotation". I need to do this with several of the Hamsticks I use when running mobile. My 20 Meter Hamstick wouldn't resonate any lower than a 2.5:1 SWR, no matter to what length I adjusted the stinger. My 20 Meter Hamstick needed 200 pF of shunt C at the base of the antenna. I simply clip-leaded it across my ball mount's ball and one of the ground screws. The SWR drops to 1:1 at resonance and stays below 1.5:1 across the entire 20 Meter voice band.

If you're running barefoot with your rig (100W out), 1000 Volt silver mica caps work fine for this.

For me, my 15/12/10 Meter Hamsticks didn't need any shunt C. However, I still do need 30 pF to make the 6 Meter Hamstick resonate to a 1:1 SWR. So as you can see, it's not always the case that the need for shunt-C goes away with higher operating frequencies. You'll just have to do some experimenting. Your antenna isn't necessarily bad....it could simply be an idiosyncracy of your particular mounting configuration.

MFJ and Valor make little boxes with several values of shunt C, switchable with a rotary selector for use on various bands or for weird matching needs. These cost between $15 and $25 and are UHF coax connector in and out. While I could have put one of these in the coaxial line near the end of my run at the ball mount, I'm satisfied with the clip leaded approach. It even holds on well at freeway speeds.

Good luck.

First of all you need to transform impedence from 8 ohms to probably 1000
ohms with a audio transformer.
(available from radioshack) then you need to pad it down to a lower level
with a variable resistor probably 10 k ohms also Radio Shack.

I have for sale a mint condition Ranger 2950DX, new in the box. This radio was used in my car for a couple of months but removed daily. It will transmitt from 26 to 32 Mhz all modes (SSB, CW, AM, FM). Comes with box, manual, U/D Mic, mobile mounting bracket and all hardware. I just bought a new Yaesu FT100D and don't need this radio. Looking for a good home for it!
Want $220 plus $15 shipping. Will ship only to the US!
This little radio works great and will not be DOA. I made contacts all over the US on the 10m band also Japan.
Contact me at keith@tnmail.com or call 425-442-1011
I am good in the callbook site www.qrz.com.

May God Bless!

Hello,

I'm urgently in need of a crystal(s) in the range 15.020-15.060 Mhz. If anyone has something in this range (any size) and would be willing to part with it please e-mail me ASAP. I'm willing to pay, swap, or return the favour in some way!

This is the 6 M AM transceiver spotlighted by the IA QRP club a year or so ago. This is a rig designed by Rick Littlefield originally called the Nor'easter and published in Communications Quarterly. I have the board, the pots, a used CB modulation transformer, the modulator chip, the crystal filter (the good one), and the coil form. I am also including all documentation, addendums (some items in color), and a copy of the original article. I'll sell it for $20 shipped priority mail (lower 48). This is a really neat project. I've just never had the gumption to get it finished.

I do not know, but I am only guessing.
The TS-2000 in newer, has fewer parts and cost them less to build.

 From: vhfradiobuff@aol.comspamsux  (VHFRadioBuff):
"..I have for sale a mint condition Ranger 2950DX, new in the box. 26-32Mhz..."

     Something seems wrong here. The 2950DX model is the newer SMT Dual Band
rig with 12M (24Mhz) & 10M right from the factory, & mod to 24-30. (they sell
for at least $300 new) The "older" discontinued "non-DX" 2950 models were 10M
only, & opened to 26-32. (these are still at coppers for $200) Is this guy
Advertizing a 2950DX & then gonna stick someone with a non-DX after the sale??

I was thinking about that but figured he must have gotten the model number
confused. After all, he DID state the coverage is 26-32, not 24-30...

Oops I did say it was a 2950DX which it is! It will cover 24 to 32 Mhz.
I haven't used it in a couple of months now so I was confused on that point.
No, I won't sell an old non DX version at the newer price. this one does
have the newer SMT technology and nicer GREEN display. It was fun listening
to all the cool stuff above 29.7 Mhz on FM and hearing all the little
municipalities and other dispatch services. I even have some in the memories
still! I have NO use to operate on the CB band since I can operate on 160m
on up!
Please feel free in asking any questions about this radio! By the way I am
only getting rid of an extra piece of ham gear so I can buy something else
ham radio related. It is used not new.

May God Bless!

Keith WB7RTT keith@tnmail.com

I am new to ham radio. I will soon be purchasing a 2/6 meter transceiver from TenTec. It has a 4-pin microphone connector. If I by a VEC-212 morse code keyer, how do I connect the keyer terminals to my radio's 4-pin microphone connector? Thank you for your help. I have tried many other places for help without any luck. The website of the transceiver I am purchasing: http://www.tentec.com/TT526.htm

Hi Doug
The VEC 212 does not need to be connected to the radio.
It is a self contained practice oscillator.
If you are planning to remove the oscillator connections and use the key
separately with your rig for transmitting, you will find a key connector
socket on rear of the
rig. It is marked KEY PTT on the page you linked to, and looks in the
picture like a standard mono headphone connector.

Thank you for your help. If I EVER have any other issues to resolve regarding radio I will ALWAYS create a post here. It has been about two weeks now since I emailed a company that manufactures keyers. I never got a reply.

Sorry to bother anyone again, but I have just one last question (remember, im new to this). Will the keyer come with the "plug" to insert into the KEY PTT port, or will I have to buy one and connect the wires to it? Thanks again.

I have only played with the radios in a dealer's showroom... not a good place to form important opinions. I was considering a 2000, especially at today's price levels. I thought the 870 receiver played better. The salesman agreed. Then when I read a 2000 review (ARRL?) it left the definite impression that the 2000 does "more stuff" than most other radios, and does most of them adequately... but is not particularly outstanding at any of them. That's pretty much the impression I had, though I'm sure many 2000 owners will take issue with that statement. "Different Strokes...."

When a manufacturer whacks prices like that it tells me one of two things. Either there is a better model on the horizon or the current one isn't selling as they had hoped. Same thing happened to me on the Icom 756PRO. I paid $2,900... now it's going for $1,800. VERY soon after, the PRO II showed up.

I've never stripped one apart. I could see the thin coax having a good
bit of loss on the higher bands, but you would think it wouldn't
amount to much on 80/40 meters. I wonder how long this "supposed" coax
section is? And how thin?

Sure, even the butternut has this problem to a degree on 10m. "3/4
wave". But they did design them to use only a 1/4 section on 15m to
get around this problem a bit. But my comparions apply mainly to the
low bands. 80/40, etc.
To my way of thinking, if two antennas are appx the same height in WL
for a certain band, and both have equal radial screens under them, and
one loses out in a comparion test, how can the loss be anything other
than ohmic? Both antennas are short for the low frequencies.
>

I could see that happening if the antennas were slightly different
heights, but again on the low bands, I would think the launch angles
would be about the same.

Well, I guess thats good. But I can say the same thing about all the antennas I make also. I used a homebrew self supporting 32 ft vertical. I made it thin and flexible. There were times with strong winds that the radiator was blowing sideways, but it always propped back up straight when the storm blew through.
I still have the antenna, but haven't use it in a while. I took it down because I was paranoid of lightning hits to a 68 ft tall vertical lightning rod.. That was during a summer of daily lightning storms.
>
A simple pole
> driven through a tuner does the job too (better/poorer/indifferently).

Agreed. But I think using full size mono band verticals the best route for anyone that wants to get serious about a vertical. For 40-10 use for someone that can't use radials at all, there is no doubt in my mind a R-7 or similar antenna elevated about 10-20 feet will smoke anything else out there with no radials unless it's a full 1/4 wave over real good ground. I've seen it happen over and over. I've also used them at field days quite a few times. They are actually pretty decent antennas and don't have near the TOA problems on the high bands that a multibander acting as a 3/4 will. When I was running the full size GP on 40m, another guy here in town used an R-7 at about that height."15-20 ft" He did quite well for what he had to VK land. He was a tad down from the full size antenna, but not a whole lot. He outdid some of the stateside guys running lower dipoles, etc. I do have to say we were both running a KW...But then again, we were both loud in the desired target of VK land. Gotta do what you have to do...I was usually over S9 in VK land with a KW. Didn't want them to have to strain their ears..:/ On the higher bands, I almost always use full size 1/2 waves or 5/8's GP's if I use a vertical at all. My 40gp doubled as a 5/8 on 17m. Depends on the band...I prefer a high dipole on 20m, but I prefer a good 5/8 GP on 10m. Better local coverage. MK

Anyone have recommendations for CW contest
simulators... I want to improve my CW
proficiency, and not have to wait for a contest
weekend to do it...

Hopefully they exist and are not too expensive...

Thanks,
George - Ku3o

I'm new to ham radio and picking out a radio for backcountry hiking in the Washington Cascade Mountain Range. This means trees and valleys and mountain peeks for the terrain.

I'm looking at the HT radios which use the 6m band, and wondering how they perform via simplex and repeater usage. Or is 6m pretty much worthless? Or is 2m good enough?

...Please reply to newsgroup...

Thanks,

Jake

I am thinking of getting into Packet Radio but I would like an opinion first before getting everything set up.

About 10 years ago, I heard that many amatures on VHF and UHF used packet for digital communications. This was before the internet really caught on so packet was the digital medium for amatures to communicate. Now with everyone wired up on the internet, I am wondering if people still use Packet at all? I know some RACES groups still use it becuase it can go great distances if enough people are on the "network" but what about everyone else?

I am curious about this type of communication because its unique. At the same time, I don't want to spend money on equipment if there is no one out there using this (I am almost have everything except a TNC and an antenna).

What do you guys think? Is there a lot of amatures using this? Is there some good web sites that have lots of info on this?

Thanks!

KC8QOY/ James

News Release
From the desk of Doug Smith, KF6DX; Chair, ARRL Digital Voice Working

Group
March 31, 2002

For immediate release:

The ARRL Digital Voice Working Group (DVWG) is pleased to announce a Digital Voice Forum, to be held at the Dayton Hamvention, Dayton, Ohio, 10:15 AM to noon on Sunday, May 19, 2002, in Room 1 following the ARRL Forum. Come hear discussions and live audio demonstrations of the hottest new mode in Amateur Radio: digital voice. The forum includes presentations from world-renowned authorities on digital-audio hardware, software and other technical details. Applications from rag-chewing to emergency communications to digital audio broadcasting will be covered.

Members of the DVWG and some distinguished guests will speak on various topics to get you up to speed on this exciting technology. Moderator Doug Smith, KF6DX, will provide some background information about digital voice and what it can do for you. He also has some comments on evaluating voice quality and on performance goals of actual systems. Coming from the UK, digital voice pioneers Charles Brain, G4GUO, and Andy Talbot, G4JNT, will discuss their previous work in this field, along with their ongoing efforts to produce even more-robust, high-speed systems. Gary Barbour, AC4DL, details his work on high-speed, software-based modems, such as are required for digital voice. His work may also result in advancement of regular, high-speed data transmission over Amateur Radio.

Special guest Harold Reasoner, K5SXK, relates his experience with digital voice in Amateur Radio and public-service communications. Through his relationship with the Motorola Amateur Radio Club (MARC), Harold has gained a lot of practical experience with APCO25-compatible radios. APCO25 is a national standard for digital voice systems. Public servants take note.

From France, Thales (formerly Thomson/CSF) graciously sends special guest C�dric Demeure to talk about digital audio, ham radio and broadcasting. C�dric is involved with Thales' entry into the digital audio-broadcasting arena. He is also part of a DVWG plan to conduct transatlantic tests of digital voice over Amateur Radio. His presentation should appeal to hams and short-wave listeners alike.

You are cordially invited to attend. Your questions are welcome after the presentations. Don't miss this opportunity to get the latest about digital voice from the experts! For more information, visit www.hamvention.org or send e-mail to kf6dx@arrl.org.

I am fairly new to the hobby buy I have been involved in packet. In my area here, eastern Virginia, packet is quite active with a good network of nodes and worm holes. That being said, the majority of folks that I know use packet to monitor DX clusters. But many of the folks that have full time internet access use telnet access to the many online clusters instead. Beyond that you can send the equivolent of email all over the world with it from BBSs once you have a bit of understanding of the system. At its high point, packet was supposedly used for many point to point contacts. That does not seem to be the case in my limited experience.

What I find facinating is the marriage of HF ports, satallites, and worm holes into the network. I can sit here with my little HT set on low power, and jump to nodes and into a worm hole. The worm hole is an internet connection that pops out some where else like europe. I can then start jumping around over there. All this on one watt, it just amazes me.

What you can do is look on local club pages or band plans and see what frequencies are used for packet and monitor them. Packet has a very distictive sound, to me it sounds a lot like a modem syncing up. Monitor for activity or just ask at the club.

In RACES, we use packet to transver written information in a timely manner. Transmitting 400 names and addresses representing the folks at a shelter would be difficult on radio even using traffic handling technics. With packet, type it in and it is gone.

The only other thing I might offer is to look at getting into the VHF side of packet first. This is realtivily inexspensive. You can find 1200 baud VHF TNCs that are brand new from $120 - $190. There is also sound card packet if you are technically inclined to get it to work to try it out. It does not require a TNC. I picked up a AEA PK232 off of eBay for $100. It supposedly does many things that I never used. It never did work right and is now headed for the scrap heap. I could have gotten a brand new VHF only Kantronics for $190 and been miles ahead. But live and learn.

This has just about tapped out my information supply for this morning so good luck. As always your mileage may vary and as well as the setup in your country. 73

FS: A pair of 38 Specials. I have one complete in a case with the 5 watt mod for 30 meters . This one needs a repair- should be an easy fix and I suspect 1 cheap IC needs replacing. The 2nd one (also 30 mtrs) is new -built nice on the board. Needs to be mounted in a case plus your jacks and pots. I have the manual too.First $55.00 takes both. Thanks and 73s Lew KlNDV

Ok, my $.02 for what it is worth. I just got into the hobby in January and wanted an antenna that would get me on as many bands as possible. I also needed one that would be reasonably sized so the house didn't look like an antenna farm (to keep the Mrs. happy). I am trying a Gap Titan and have been reasonably happy. In all fairness, I have nothing to compair it with. I have found that the great majority of the time, if I can hear them I can work them. I do have to take my time when working a pileup, but I have only had a few that I couln't get and I probably could have had them if I had the time. It may not be a perfect antenna and I probably won't be using it forever, but for now it fills my need and is worth looking at depending on your situation.

Amateur Radio Newsline™ Report 1286 - April 5 2002

Amateur Radio Newsline report number 1286 with a release date of Friday, April 5th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australian radio regulators say no to I-LINK and the NCVEC says its time to revamp Element 2. These stories are first on Amateur Radio Newsline report number 1286 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: I-LINK NOT LEGAL IN AUSTRALIA

One of the very popular internet based linking protocols appears to be illegal to use in Australia. This as the Australian Communications Authority issues a finding against I-Link. Q-News Graham Kemp, VK4BB, has the background:

--
There are two competing systems being used in ham radio to link repeaters over the Internet. One is called I-LINK and the other is I-R-L-P.

I-R-L-P stands for the Internet Radio Linking Project. It was developed in Canada by Dave Cameron, VE7LTD. It's aim is to link ham radio systems separated by long distance over the Internet without the use of expensive eased lines or satellites. I-R-L-P uses Voice-Over-IP software to link radio sites around the world. But I-R-L-P uses its own custom interface board and software suite running on a Linux platform. And that's why many hams have opted for an alternative called I-LINK.

I-LINK does everything that I-R-L-P does in linking repeaters, but it does not require a computer running Linux or any proprietary hardware interface. The needed software is available to anyone. It runs on a P-C and anyone can have it in their computer. Even non-hams. And that is what seems to be bothering our regulatory body, the A-C-A. It says that the widespread and open availability of I-LINK could make it possible for non hams to get on the air.

Over the past few weeks, much comment has been made regarding the legality or otherwise of I-LINK here in Australia. To clarify the A-C-A position, let me quote in part from a letter by John Martin the Federal Technical Advisory Chairman.

"There should be no issue with I-LINK because the A-C-A has made it clear that it must be impossible for anyone to gain access to an amateur transmitter by any means other than on-air working one of the stations that is connected to the link. The only system which can comply with this is I-R-L-P."

This action by our A-C-A appears to not sitting well with I-LINK proponents in other nations. Some fear the decision here in V-K could bring similar action by other communications regulators in their parts of the world.

VK's National Society, the Wireless Institute of Australia's President Ernest Hocking VK1LK along with WIA/ACA Liaison team member Gilbert Hughes VK1GH met with the ACA Thursday 28 March to discuss the current situation.

--
Hocking: “In order to address this situation the ACA have agreed to develop an information paper in conjunction with the WIA ACA liaison team. This paper will aim to make clear the criteria under which Internet linking can take place. The paper will not endorse specific software or systems. Rather it will provide clear guidance on the conditions that need to be met for the operation of such linked systems to remain legal within the the Radio Communications Act.”
--

It was agreed that every effort would be made to develop the paperwithin a period of 4 - 6 weeks. WIA President VK1LK has called on the Ham population of VK to "ask for your patience over the next few weeks whilst this document is being developed".

From Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Articles describing I-LINK recently appeared in both CQ and QST Magazines. No matter. Basically the Australian Communications Authority has said IRLP is O-K but I-Link has to go. At least for now. (Q-News)

**

RADIO REGULATIONS: FCC PROPOSES TO STRENGTHEN RULES AGAINST REPETITIVE APPLICATIONS

The FCC has proposed changing its application rules for all wireless radio services--including the Amateur Radio Service--in an effort to expand the scope of its current ban on repetitious applications. Newsline's Bruce Tennant, K6PZW, has more:

--

The ARRL Letter reports that an FCC Notice of Proposed Rule Making released March 20th seeks to modify section 1.937 of its rules. This, to prohibit the filing of all applications that are substantially similar to applications the agency denied or dismissed with prejudice within the previous 12 months.

The term "with prejudice" means a legal issue or court case that is dismissed for good reason and the plaintiff is barred from bringing another action on the same claim. And, if the FCC gets its way, WT Docket No. 02-87 will bring a rules change that might prohibit a handful of applications filed by new and renewing hams where a similar or identical application was denied in the past 12 months.

The FCC cites the pending license request by Herbert L. Schoenbohm, ex-KV4FZ, as an example of a repetitious application. Schoenbohm's amateur license renewal was finally denied in 2000, when the US Supreme Court refused to hear the case. His authority to operate as a radio amateur expired in January 2001.

Then, last April, Schoenbohm applied for a new Amateur Radio license and passed the General exam. The FCC has designated that application for hearing, to determine, in part, if Schoenbohm deserves to be a Commission licensee.

The FCC says that such cases consume significant resources to re-litigate. Especially since they involve identical issues and the same applicants very close in time.

What about routine issues like dismissed vanity applications? The FCC says that they would not be impacted in any way. For vanity license applications, the FCC now allows these applicants to correct the mistakes and file again. The FCC says that it will continue to do so if the proposed rule change is adopted.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW

--

Comments on WT Docket No. 02-87, are due 30 days from the publication of the proposed rule in the Federal Register. Reply comments will be due 45 days after publication. (ARRL)

**

HAM RADIO TESTING: NEW ELEMENT 2 DRAFT EXAMINATION RELEASED FOR COMMENT

The proposed draft syllabus for the new Element 2 Amateur Radio examination has been released for public comment. As we go to air, Scotty Neustadter, W4WW, who chairs the NCVEC Question Pool Committee says that this draft syllabus will be posted to the ARRL's web page within a few days.

Neustadter adds the period for public comment will close on May 9th. He asks that you send your comments to all the members of the Question Pool Committee of the NCVEC. Their e-mail addresses are:

Scotty Neustadter, Chair	w4ww@arrl.net
Bart Jahnke, Member	vec@arrl.org
Fred Maia, Member	fmaia@texas.net
John Johnston, Member	Johnston.John1@worldnet.att.net)

(NCVEC, W4WW)

HAMVENTION 2002 - THE CHAIRMAN SPEAKS OUT

The Dayton Hamvention is now just a bit more than a month away and its General Chairman, Jim Graver, KB8PSO, is speaking out. Actually he has been talking to RAIN Producer and 2002 Radio Amateur of the Year Hap Holly, KC9RP. One of the things he made public was who will be speaking at the Hamvention’s grand awards banquet:

--
Graver: “It will be William Cross from the FCC and Paul Reid from FEMA, and they will be talking about emergency communications and preparedness in respect to Amateur Radio.”
--

Want yo hear more? Well Holly has prepared an extended intervieww with Jim Graver. Part 1 is on line right now at www.rainreport.com. If you don’t happen to have internet access, try calling 847-827-7246. (RAIN)

**

CONSUMER ALERT: TELEPHONE AREA CODE 809 IS COSTLY

If you get an e-mail, voicemail or page telling you to call a phone number with an 809 area code, beware. The CGC Communicator reports that chances are, it's a scam and your phone bill will be
astronomical. The FCC has already issued a public warning about calling this area code. Its on the web at www.fcc.gov/cib/consumerfacts/809.html (CGC Communicator, FCC)

**

COMMUNICATIONS BUSINESS: AOL REPORTEDLY COURTING LINUX

Linux users listen up. Your favorite operating system may finally be getting a shot at becoming a real competitor to Microsoft Windows as rumors surface that AOL Time Warner Inc. is negotiating to buy the Linux distributor Red Hat Inc.

The Washington Post reported in late January that such talks were underway. The deal could bolster AOL Time Warner against rival Microsoft as both companies design strategies for moving their services beyond the personal computer to mobile devices and such nascent services as interactive television. (Publised reports)

**

HAMFESTS: ST. JOHN LUTHERAN SCHOOL HAMFEST

Turning to the hamfest scene. The St. John Lutheran School Hamfest and Electronics Show is slated for Saturday, April 13th from 8 a.m. to 1 p.m. Location is in Garfield Heights Ohio. Garfield Heights is 10 minutes South East of Cleveland with the school at 11333 Granger Road. Admission is only one dollar. For more information please write by e-mail to ln4js@visn.net. (via E-Mail)

NAMES IN THE NEWS: KE4IQB NAME WITHDRAWN FOR DEPUTY NASA ADMINISTRATOR

NASA says the White House has withdrawn the nomination of Marine Corps Major General and former astronaut Charles F. Bolden, KE4IQB, to be the space agency’s next Deputy Administrator. Bolden is currently Commanding General of the 3rd Marine Aircraft Wing, based in San Diego. According to the CQ website, the NASA announcement did not say why Bolden’s nomination was withdrawn, but suggested that the Defense Department objected to losing him from an active military command during the war on terrorism. There was no immediate word on who would be named to the number two post at NASA instead of Bolden. (CQ)

**

NAMES IN THE NEWS: KB2GSD TO PITCH FOR FREE AIRTIME

Walter Cronkite, KB2GSD, will be the pitch man for a new campaign taking on broadcasters for not offering enough affordable or free airtime to federal candidates. This, even though the airwaves are owned by the American public.

The coalition sponsoring the Cronkite narrative said that its kicking off its grass-roots drive following passage of the landmark campaign finance reform legislation. This legislation spared broadcasters from having to offer deep discounts to federal candidates.

Under current federal law, broadcasters are required to give discounts to political candidates. However the actual rate can vary depending upon the time it is slated to air. (Publisged reports)

**

NAMES IN THE NEWS: W6TIA RETIRES FROM KFWB

Richard Rudman, W6TIA, the Chief Engineer of KFWB - AM in Los Angeles California is retiring following a truly illustrious thirty year career at the all-news station. Rudman, who is the National Chair of Congressional Emergency Alert System Advisory Committee is perhaps better known for his roles with the establishment and evolution of the E-A-S nationwide.

During Rudman’s tenure heading up the engineering helm of KFWB, the region has been regularly challanged by major brush fires, power failures, earthquakes, riots, and more. Throughout all of this Rudman has kept KFWB on the air. A truly enviable record and one that W6TIA can be proud of.

And less we forget, W6TIA has agreeed to be a part of this years Newsline sponsored Ham Radio Town Meeting at the 2002 Dayton Hamvention. His topic will be the Emergency Alert System and introducing it to Amateur Radio. (CGC Communicator, ARNewsline(tm))

EMERGING TECHNOLOGY: SMART FENCES

Smart fences are possible. So say Pennsylvania State College researchers who are using acoustic technology to turn a simple chain-link fence into an intrusion detection system.

To make the system work, a single strand of galvanized steel wire, a system of springs and weights and some inexpensive ground sensors make the fence sensitive to intruders. Among parties interested in the technology are the U.S. military, airports and oil companies. (PSC News Release)

**

SPACE AND SCIENCE: REPLACEMENT TDRS IN TROUBLE

A NASA communications satellite launched into orbit on March 8th has developed a problem with its onboard supply of propellant. The trouble is delaying the Tracking and Data Relay Satellite-I from reaching its ultimate destination, a circular orbit about 22,300 miles above Earth's equator. The satellite's current egg-shaped orbit is 22,236 miles at its ap[ogee and about 4,970 miles at its perigee. The spacecraft's manufacturer, Boeing Satellite Systems, is hopeful that its engineers will ultimately be able to deliver the satellite into its proper orbit. If it can't, the satellite could be declared a total loss. (Published news reports)

**

INTERNATIONAL - HOLLAND: NEW LATIN AMERICAN RADIO STATIONS CD

Dutch shortwave enthusiast Max van Arnhem has produced an audio Compact Disc featuring 371 wave files of Latin American and Caribbean radio stations. According to Media Network, most are off-air recordings as received in his home in The Netherlands, but there are also some recordings made on one of the five trips he made to Central America and the Caribbean between 1979 and 2001. You can find a review of the CD, and details of how to buy it at www.rnw.nl/realradio/booklist/html/lacd.html. (Media Network)

**

DX

In D-X, the Ducie Island DXpedition is being called a major success. The ifirst ever D-Xpedition to the newest DXCC entity came to an end March 26. The VP6DI team was on the air for just over nine days and loged over 39,000 contacts. VP6DI HF QSLs go via VE3HO, and 6-meter QSLs go to JA1BK.

And some good news for DXCC chasers. This as the ARRL announces that it will accept SSB contacts with P-5 slash 4L4FN in the Democratic Peoples Republic of Korea for DXCC credit. The operator of the station is Ed Giorgadze of the Republic of Georgia. He has been active from the capital city of Pyongyang since last November. Valid contacts from the beginning his P-5 operation last fall may be submitted for credit, effective immediately. (ARRL)

**

A NEWSLINE FOLLOW-UP: THE POLITICS OF 11 METERS - PART 2: “A NATIONAL RESOURCE CALLED REACT”

Last week we told you that there has only been one truly successful organization with any political ties to 11 meters. In Part 2 of his special report on the not so political side of 11 meter Class D CB, Amateur Radio Newsline’s David Black, KB4KCH, takes a look at REACT.

--

A long known name in CB radio is REACT, or Radio Emergency Associated Communications Teams. REACT's mission statement stresses public safety communications, assisting individuals, groups and government agencies.

The stated goal: To save lives, prevent injuries and give assistance wherever and whenever needed. The group promotes establishing a monitoring network of trained volunteer citizen-based communicators and using all means available to deliver their message. REACT, it seems, has succeeded on both counts.

The idea of using CB radio in an organized way for emergency communications was born in a mid-winter Chicago snowstorm. It happened after CB radio was used to summon assistance for a young family with a very sick child whose car was stuck on an expressway. That was in the winter of 1962 when CB was really still in its infancy.

Not long after, the groups founder, Henry B. "Pete" Kreer, convinced the Hallicrafters Company to sponsor the REACT program. The initial requirements for a Team was for three members who agreed to monitor 11 meters several hours a day for emergencies. There were no dues or other requirements except to comply with federal and state regulations.

By 1964, it was determined that there was a need for a National CB Emergency Channel. REACT National Headquarters asked all of its 800 teams to monitor channel 9 as a voluntary emergency channel. The scheme worked so well that in 1967, REACT led a movement to convince the FCC to designate channel 9 as the CB emergency channel. It was a major political success and many CB hobbyists began to look at REACT as a possible voice in Washington. But that was not to be.

In 1969, General Motors Research Labs assumed sponsorship of REACT. Also in 1969, Jerrold Reese -- a name that would become synonymous with the growth of REACT became its Managing Director. Founder Henry Kreer remained on with the title of Executive Director.

It was on April 24, 1973, that REACT and to a lesser degree 11 meter C-B probably got its greatest public exposure. That’s when NBC's Today Show televised an interview with Gerald Reese and Henry Kreer. Their interview dealing with the REACT program was aired on some 220 affiliated stations. It lead to over 500 inquiries.

In 1975, REACT broke from GM and started as an independent organization. Not long after, REACT International received not-for-profit status in the state of Illinois followed by federal tax exempt status.

REACT was on its own and less than a year later, it was represented at the first White House Conference on CB radio. And in the ensuing years it won many awards for promoting highway safety through its radio monitoring efforts.

But nothing last forever and the late 1970's brought declining use of 11 meter Class D CB. As the 80’a approached there were far more CB sets sitting on closet shelves than on the air. The C-B craze was dying and with it fewer people in the REACT program.

By the middle 1980’s REACT the only major organization with any ties at all to 11 meters. REACT had survived the CB shakeout probably because never claimed to be a savior or rallying point for 11 meter hobby operators. It’s self appointed task was assistance to the public. REACT was now national and chapterized and tax exempt. It also had broadened its horizons to include other bands and began using operators from other services including ham radio. C-B was now only a part of the REACT model.

In retrospect, one might say that REACT fought very hard for setting up an emergency communications monitoring system on 11 meters, but it was not a lobbiest for the rights of the 11 meter hobby radio operator. Instead, it always has lived to its mission statement and that’s probablly why it has survived and prospered for the last 40 years.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

To learn more about REACT International or to find out if there is an active REACT team in your area, please write to REACT International, Inc. 5210 Auth Road, #403, Suitland, Maryland 20746. You can also go to their website at www.reactintl.org.

Meantine, one question remains: Will anyone ever be successful in totally organizing political potential of 11 meter C-B? That part of the story, next week. (ARNewsline(tm))

I'm looking for information with regard to programing one of these repeaters
which I recently aquired. I have the programing interface but the software
is not completely suitable. I have done some searching on the net and any
results I get are Japanese or Russian sites and as I don't speak any of the
two they are of little use.
Any help greatly appreciated.

Thanks.

I am interested in radio, but the morse code requirement is turning me away from Ham Radio. I want to experiment wtht the technical aspects of radio, not just operate it. I know the morse debate is not a new debate and there are those strongly for it. Lets just say that I am not interested in memorizing the Morse alphabet to get a higher class licence. I know the 5 words per minute requirement is easy, so I may just break down and learn morse code, to get above the Technician class licence. But, I will still resent it. I would much rather have a more challenging test (that requires more than memorizing the question and answers), than put up with learning Morse code (which I never intend to use).

Also, I have found Ham radio organizations to be very boring. If you read the ARRL handbook and QST, you may believe Ham radio is an interesting hobby. However, in practice, these people do not exist at the meetings. I thought perhaps the group I joined was boring, so I tried two other Ham clubs. They were boring also. So, it seems that Ham radio is boring. At one of the meetings, it was mentioned that so many new recruits quit. I am not surprised.

Ham radio people are not very open minded. Also, they are not very willing to share their knowledge. The people act like they are part of some strange cult. Their interests seem to be with Morse code and "contesting". Contesting is essentially a dumb activity that focuses more on endurance than intelligence. Contesters want to contact as many people as possible in a given time period. Boring. Also they pollute the spectrum. Even the most cult like Ham gets annoyed when their communication is interrupted by a contester or some morse code transmission from a fellow Ham. At least foxhunts and mobile operations are interesting. But if you are interested in these activities, you are not a "true" Ham.

Also, Ham radio does not have a good reputation. I mentioned this to some friends and they started to make fun of it. I told them Morse code was required and one person mentioned that that nobody uses that anymore. Then, they compared Hamfests to Star Trek conventions. They asked if Hams do any interesting activities or have many females in the organization. The answer to both questions was no. Hams are not even respected in industry. If I mention Ham radio, it can even be a negative. One manager said he would never hire a Ham radio person. He did not say why. Ham radio is known more as a cult than a technical activity and this could hurt you in industry.

I would like to know if there are any other radio organizations. Do specialy Ham clubs exist that mostly focus on the aspects I find interesting? It seem like the amateur spectrum is owned solely by Ham Radio (with the exception of the CB band). They problem with that is that "Hams" are too restrictive. You have to do it their way or else. Due to the morse code requirement, there is clearly a need for another amateur radio orgnization besides "Ham" radio. Also, Hams are stuck in their prospective. In order to broaden the horizons of radio, another organization is needed.

You can certainly do that with the Technician class license. That opens up
all of the VHF and UHF ham spectrum to you. The only thing you do not get is
the HF bands (where morse code and contesting exist).

I know the morse debate is not a new debate and there are
> those strongly for it. Lets just say that I am not interested in
memorizing the

I do not use it either (but I did learn it). However, as noted above, you
can get into all of the areas of ham radio you are interested in without
learning morse code.

>
> Also, I have found Ham radio organizations to be very boring.

Some sure are boring, won't argue that. But there are some good ones also.

If you read the
> ARRL handbook and QST, you may believe Ham radio is an interesting hobby.

It is whatever you are willing to make it.

>

While I personally agree with you regarding contesting, it is a very popular aspect of ham radio, and many hams are involved in it. You need to try to be as open minded regarding other aspects of ham radio as you want other hams to be regarding the areas you are interested in. No one person is going to find interest in every aspect of ham radio - it's just too big, too broad, too diverse.

> Also, Ham radio does not have a good reputation. I mentioned this to some
> friends and they started to make fun of it. I told them Morse code was
required

This depends on a lot of things, however ham radio actually resulted in my getting a very good job once. Had it not been for my activities in ham radio, and meeting people I met, that opportunity would never have presented itself to me. I have heard radio "professionals" go both ways on the issue.

>
> I would like to know if there are any other radio organizations. Do
specialy
> Ham clubs exist that mostly focus on the aspects I find interesting?

Yep, sure do. Go find one rather than complaining about it.

It seem
> like the amateur spectrum is owned solely by Ham Radio (with the exception
of
> the CB band). They problem with that is that "Hams" are too restrictive.
You
> have to do it their way or else. Due to the morse code requirement, there

Also,
> Hams are stuck in their prospective. In order to broaden the horizons of
radio,
> another organization is needed.
>
>
Your entire last paragraph really does not make any sense. Of course the ham spectrum is "owned" solely by ham radio - that is the very definition of why it exists. Our federal government, through the FCC, slices and dices the radio spectrum and hands it out to the highest bidder. Thank goodness ham radio managed to grab a slice before it become lucrative to sell it off. The challenge now is on retaining it, and the fewer hams that exist, and the less use of the ham spectrum, makes it that much more attractive for business to go after it, and that much more difficult to retain it as amateur allocated frequencies. That's why the no-code tech license is good (it has brought growth to the ham population), and that is also why contesting has it's value (it does keep the HF bands active).

However, in response to your question, there are many ways for you to become active in selective areas of radio, either within, or separate from, ham radio. For example, you mention fox hunts and mobile operations as interesting. I'm active in a search and rescue organization that does a lot of radio direction finding (of aircraft and marine emergency beacons), and it has nothing to do with ham radio, but it is fun and interesting. They also do a lot of mobile radio operations, some with ham radio, and some with commercial radio. So it is possible for you to find what you are looking for both within, and separate from, ham radio. Go for it.

Carl.

I've heard that the Radio Shack HTX-202 has a
problem if a battery pack is used with a higher
voltage (e.g. 13.2v). It's said to produce an
error message in that case. Battery packs with
lower voltages are fine.

The external power connector takes 12v or more
just fine. I've also heard a fix (a small cap across
the battery connection) that is SAID to fix this
problem. I've heard no other corroberating info.

Anyone have experience with this? Is there a way
I can safely use a 13.2 battery pack?

Please reply to mark@t4x.com, but change the "x"
to a "p" in the above email (it is altered to stop
spammers). Thanks in advance.

Mark

I believe the mod you mention is available on the QRZ web site. To
answer your question, regarding there being a way to safely use a 13.2
volt battery pack.... ISN'T THAT WHAT THE MOD WAS SUPPOSED TO DO???

And I answer...

Presumably, yes, that is what the mod is supposed to do.

My desire is to hear some corroberation or confirmation
from other sources that this mod (or some other) is sound
and known to be reliable. I like to just be a little cautious
about things I read on web sites...

While we are at it, may I ask, was there ever a blank slide-on cover
made or furnished for when you use the thing without the orgijnal
battery pack?  Sure like to have one, no mention in RatShack info.

>> Also, I have found Ham radio organizations to be very boring.
>
>Some sure are boring, won't argue that.  But there are some good ones also.
>
I've been to several clubs.  I doubt it will get any more interesting. Its
probably interesting to the regular members, but for most EEs it is not. Thats
where I'm coming from. As an EE, I like to design and build things. I like
hands on activities, not just operating a radio.

>> Hams are stuck in their prospective. In order to broaden the horizons of
>radio,
>> another organization is needed.
>>
>Your entire last paragraph really does not make any sense.  Of course the
>ham spectrum is "owned" solely by ham radio - that is the very definition of
>why it exists.  Our federal government, through the FCC, slices and dices
>the radio spectrum and hands it out to the highest bidder.  Thank goodness
>ham radio managed to grab a slice before it become lucrative to sell it off.

True,  the spectrum is owned by Amateur radio, and I am grateful for that.
Otherwise I would not be able to use it. But Ham radio is what it is, not what
a person makes it. Ham radio is less technical now and more about operating.
Thats just what it is, despite what the ARRL claims it to be..

One  alternative would be another "Amateur" organization, besides Ham radio.
Both would have to follow the current licencing rules. The only difference
would be in the amateur radio activities. Also, a  specialty Ham club could fit
these requirements it they advertised themself as a specialty club. Such clubs
do not exist right now.

I use ten turns of RG-400 (teflon) on an FT-240-61 core. Works very well.
I use RG-400 because it is small with a large breakdown voltage.

The wife and I had a very enjoyable QSO on 2M simplex with an 18-wheeler while driving through (most of) Arkansas last Tuesday. The other OP (Jim, KB9VR) was an ex-destroyer man like me. He said that he thought there was an 80-M net for tin can sailors, but he wasn't sure.

I can't find anything on the ARRL web site, but I don't know whether they have an electronic list of nets as they also sell a book of net listings. My 1988 copy of the Net Directory does not list anything that sounds close, other than the Navy ARC net.

Cany anyone give me some more info?

Thanks,
Ed - N5KZW

CENTRALAB CERAMIC ROTARY SWITCH -This is a NEW/UNUSED Centralab ceramic rotary switch. Box has faded "2005" on the label, but not sure the box matches the switch. The switch appears to be a 2-pole-12-throw rotary suitable for audio or low power RF applications. The stops on the switch mechanism currently block it to 2-throw positions, but by changing the tabs it appears that all 12 switch positions can be enabled. Not sure if contacts are copper or silver plate. $18, I ship. Pay by money order or cashiers check. Email to dt0124@comcast.net

As with the other responder, I am giving you the benefit of assuming that
you are not trolling.

You have told us what you don't like in the existing amateur radio society.
Tell us what you would like.

You say that you are 'interested' in radio .. what interests you about
radio?
What would you like to be able to do with radio?
What should a radio club be like? Tell us about an ideal club.
What would people be doing that would make you want to associate with them?
Are you interested in other aspects of electronics? Computers? Audio?
Robotics?

Please don't be offended. When my kids were teenagers I heard a lot of
"Dad, I'm so booored! A lot of 'being bored' is simply not knowing what you
want to do. Perhaps if you can focus your interests, you will be able to
find a group of people with like interests.

Alan Walkington - ab0nu

The ARRL on line net directory is at

http://www2.arrl.org/FandES/field/nets/client/index.html

Searching for Tin Can Sailors, the only one listed is the one on
14255 kHz Sundays at 2100 UTC (probably 2000 UTC during the summer).

Other net listings can be found at

http://www.worldofradio.com/nets2you.html

http://www.ac6v.com/nets.htm

>As with the other responder, I am giving you the benefit of assuming that
>you are not trolling.

I am not trolling. I am just frustrated with some Ham clubs. Most of the Hams seem to emphacize Morse code and contesting, activities which I do not find particularly interesting. Then, they claim I am am not a "real" Ham if I do not like those activities. Also, most do not seem to be interested in technical activities.

>You say that you are 'interested' in radio .. what interests you about
>radio?
>What would you like to be able to do with radio?

>Robotics?

I have a degree in Electrical Engineering and I am interested in the technical aspects of radio. Some things I would like to do include antenna setup, foxhunting, mobile communications, setting up transmitters and receivers in challenging terrain.

Also, a radio club should have the opportunity to build circuits. I would like to experiment with various circuits, for example those in the ARRL handbook, and learn from them. Group projects would be useful. It is easier to build projects if several people work on it. You could try several variations if several people share in the project.

>Please don't be offended. When my kids were teenagers I heard a lot of
>"Dad, I'm so booored! A lot of 'being bored' is simply not knowing what you

>find a group of people with like interests.

A club should do more than meet once a month. There should be more activities. A Hamfest is fine, but there should be more than that. Camping, boating, foxhunts, towers visits, repeater visits, are some examples. Even those people that were interested solely in operation would be bored with no activities besides monthly meetings.

Well as far as such "specialty clubs" not existing, how about AMSAT? Working
birds is lots of fun and you can design and build lots of your own stuff.
Also things like Skywarn, RACES, etc. those are specialties as far as clubs
and purposes go.
There is SSTV and MARS. Our club has made itself available and on call to
the city and county authorities for emergency communications and search
situations.
You can set up your own iLink at home be mobile and dial up another repeater
system in another country and impress the your neighbors. HAhahaha!
Remember a club is only as boring and lazy as its membership lets it be.

No sweat. If you don't want to learn the code, there are lots of
activities you can be involved in over 50 MHz.

Members of those clubs are interested in things they are interested
in. You are interested in things you are interested in. Boring is in
the eye of the beholder.

See previous comment about the eye of the beholder. My observation is
that most contesting occurs on HF bands. Since you don't do code, that
shouldn't be a problem. Whatever floats your boat.
>
>Also, Ham radio does not have a good reputation. I mentioned this to some

Hamfesters will never be mistaken for the casting call for the
Baywatch reunion movie. So what? Do you know what the general
population would think of the attendees of an IEEE convention? Are
hams not respected in your industry? Then is't up to us hams to
educate them what we do and who we are.

Should there be more (signle, attractive, etc) women in ham radio. Absolutely! What are you doing to recruit them? Have you volunteered to speak at to a technically oriented school (high school or college) group?

You mentioned a manager who would never hire a ham. So what? I know some folls who won't hire an engineer who doesn't play golf. Everybody is entitled to their (uniformed) beliefs.

>
>I would like to know if there are any other radio organizations. Do specialy
>Ham clubs exist that mostly focus on the aspects I find interesting?

Are there other organizations? Sure. I can quickly think of several groups working on "interesting" activities:

- Tuscon Amateur Packet Radio (http://www.tapr.org) has pioneered digital communications and is now working on software defined radio projects.
- AMSAT (http://www.amsat.org) is working with groups around the world building, launching, and operating amateur satellites.
- A Brevard County (Fla) group building portable NTSC-compatable amateur television units to use in disaster and public service events.
- Orange County ARES/RACES built trackers that, along with a GPS and HT, provided real-time position information during a charity walk/bike event.
- Seminole County ARES/RACES is working with others to put together a statewide digital communications system.

I can also think of individuals who do other "intersting" stuff. For instance, a ham in Columbia SC builds gigahertz preams and high power transmitters to work moonbounce. My experience has been local clubs will welcome anyone who wants to chair special activities. Have you volunteered to organize the next fox hunt or picnic or Saturday fun day or presentation at a school? Have your efforts to join an lead been rebuffed? The start your own informal group.

>It seem
>like the amateur spectrum is owned solely by Ham Radio (with the exception of
>the CB band). They problem with that is that "Hams" are too restrictive. You
>have to do it their way or else. Due to the morse code requirement, there is
>clearly a need for another amateur radio orgnization besides "Ham" radio. Also,
>Hams are stuck in their prospective. In order to broaden the horizons of radio,
>another organization is needed.
>

You bet we're restrictive. There are plenty of services (FRS, GMRS, CB, etc) for folks who don't want to deal with the FCC rules. Great. Wonderful. I wish them all the best. There is plenty of room for us all. I'll put my plug in for the ARRL now: if it wasn't for a strong national organization we would likely loose most of our spectrum very quickly. The folks with the money lust after our bandwith and it takes people who know how Washington works to fight to keep what we have. $39 a year is IMHO a cheap price to pay.

One last thought: remember that not everyone in amateur radio is an electrical engineer, not everyone is interested in the same areas that you are. An electronics technician who deals with practical issues sees things differently from the BSEE (who has the designer's prospective), which is different from my BSCE professional engineer point of view which is different from the prospective of the retired mail man. Time to stop complaining and start doing!

OK, I'll step down from my soapbox.

BTW, what's your callsign? I don't see anyone in NH named Shah.

When I bought mine, it came with an extra pack for six standard AA
cells. I have that filled with NiCads, now that the original pack is
dead.

They still make and sell the AA battery pack, you have to order it from
the catalogue but it, as well as the leather case and the 7.2 volt NiCad are
still available from RS.

Another thing to try with the DP-GH62 is to put wooden dowels thru-out to
beef it up, this will help quite a bit with strong winds

I have a working HW-101 rig with the power supply, speaker and station console, SWR/power meter and various cables to connect it all together that I would like to clear out to make room. Reasonable cosmetic condition, no serious dings, dints or scratches. Dials and knobs okay. Looking for $200 USD plus reasonable shipping costs for the lot.

Contact me at

cbfengineer@telusplanet.net

for details.

Regards,

Curtis

Can you transmit? Sure. Will anybody hear you? Maybe.

How well do you get along with the landlord and your fellow tenants? You could place dipole in the attic or a loop on the roof if they don't mind . I had fair success working HF (100 watts +/-) using a roof mounted loop and MFJ manual tuner.

Otherwise, you can place a loop around the perimeter of the ceiling of your largest room. You will probably be limited to higher frequencies and low power. If you're in the US, do the RF safety calculations and be prepared for complaints if you get into your neighbors' TVs, etc.You may need to help them to solve their RFI or agree to "quiet times."

Also think about how you will handle station grounding. Do you have a cold water pipe that's metal all the way to the ground. If not, there's another good reason to stay QRP.

If none of these work, you'll have to limit yourself to mobile (permanently mount the radio/antenna in/to your car), portable (mount the radio but use a larger wire or vertical antenna) or a club station.

Andy, I'm sure that the guys in Starksville, MS would be surprised that they now live it TN!! Think you were thinking of TenTec, which is in Sevierville, TN (near Knoxville). CT Morgan is in Chattanooga...don't know about Nashville, tho.

These scanners are in real good shape. Original bought them because they reminded me of the early days of scanners. Good working condition for all three. Nice shape cosmetically. Would like $40 for each or $75 plus shipping for all three.

Nothing has changed for the Novice class, It can be renewed when need be. What you might want to keep in mind is the the only code requirement is 5 WPM. If you take and pass the Tech. and General written you will me a general class operator.

Hi,

Has anyone out there ever tried to program software to use the CAT interface on an FT-1000MP?   I have been doing so, and have run into problems reading data back from the radio. Yaesu's "Cat System Computer Control" documents describes how to get 16 bytes of status information from the radio, containing band, frequency and mode data (and other data).   The mode information comes back fine, but the 4 bytes designated for the frequency do not have the data as the document describes. My software can set the frequency using the cat interface without problems, it's just the data coming back that is wrong.

I have tested the radio against software downloaded from the net, and it reads the frequency fine.   Has anyone any idea what I might be doing wrong? Is it possible that the spec might be wrong?

Thanks,

Trevor Darmody.

I looked you up on www.qrz.com, which has a callsign server.

Your license is still valid, expires: 27 Oct 2004.

You can renew as a Novice forever if you choose to. They are not
issuing any NEW Novice tickets since the restructuring.

As mentioned, you already have the 5 wpm code, so to upgrade you would
just need to pass the written tests (Tech to become a Tech Plus,
General, then Extra).

HTH,
Happy trails,
Gary (net.yogi.bear)

I am looking for PowerPoint slides for a Technician class that coincide with the ARRL Instructors Manual. I have started making my own set, but I don't have enough time to finish. Anyone willing to help and send me a copy of theirs?

Thanks

Derek, W7REX

Folks,

I am trying to decide between a TS-2000 and TS-870S.
The 2000 seems to have more options/bands/bells/whistles,
but the 870 has the higher price tag? It appears there is more in
the 2000 so why is it so much less expensive than the
870? What feature set in the 870 demands the higher
price tag? I thought both rigs had similar DSP functionality
The 2000 appears to have many more bells/whistles...

Am I going to be sacrificing receiver performance
for bells/whistles if I go 2000...

Just trying to figure out the price difference...

Im seeing the 2000 for ~$1800 street and the 870
for ~$2300.

Thanks for your comments...
Ku3o

I just bought this radio from someone who thought it was a C.B. It appears to work fine, EXCEPT when you change frequencies and you key up for the first time and then let off the key all you receive is static. Turning the radio on and off will allow you to talk all day on that frequency, but when you change frequencies it will happen all over again. Although I am in need of a manual, I dont think its a programming issue.

Can anyone help figure this one out?
Thanks!
Steve

I currently have the following books for sale on radio antennas. Postage is $2 for the first book and $1 for each additional item (within the US, at cost elsewhere). The books are:

Moxon, L.A. "HF Antennas for All Locations" published by the Radio Society of Great Britain, 1991. ISBN 0900612576 The 260 page softbound book is in very good condition, clean with no page tears or pen marks, and a strong binding. A thorough treatment of HF antennas. Available for $9.

Straw, R. Dean (editor) "The ARRL Antenna Compendium (Vol. 6)", Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1999. ISBN: 0872597431 The 200 page softbound book is in fine condition, fresh and clean inside and out. All new articles (43 of them) on antennas, transmission lines and propagation - projects to build and new approaches to explore. Includes a CD inside the rear cover with the source data for modeling many of the antennas. Available for $12.

Straw, R. Dean (editor) "The ARRL Antenna Compendium (Vol. 5)", Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1996. ISBN: 0872595625 The 200 page softbound book is in near fine condition, fresh and clean inside and out except for a square neatly cut from the lower corner of the blank rear end page (it may have been a coupon or order form). Includes a diskette inside the rear cover with the source data for modeling many of the antennas. Available for $9.

Straw, R. Dean (editor) "The ARRL Antenna Compendium (Vol. 4)", Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1995. ISBN: 0872594912 The 204 page softbound book is in fine condition, fresh and clean inside and out.Includes a diskette inside the rear cover with the source data for modeling the antennas. Available for $10.

Hall, Gerald L. (editor) "The ARRL Antenna Compendium (Vol. 3)", Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1992. ISBN: 0872594017 The 236 page softbound book is in fine condition, fresh and clean inside and out. Lots of useful information on radio antennas. Available for $9.

Hall, Gerald L. (editor) "ARRL Antenna Compendium (Vol. 2)", Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1989. ISBN: 0872592545 The 208 page softbound book is in very good condition, fresh and clean inside and out. Available for $9.

Hall, Gerald; Paul Rinaldo; Maureen Thompson (editors) "ARRL Antenna Compendium, Volume 1", Newington, CT, U.S.A.: American Radio Relay League, Incorporated, 1985. ISBN: 0872590194 The 175 page softbound book is in fine condition, fresh and clean inside and out. Available for $9.

Erwin, David G4LQ1 "HF Antenna Collection", Radio Society of Great Britain, 1994. ISBN 1872309089 The 233 page softbound book is in fine condition, fresh and clean inside and out. Available for $9.

Orr, William I. "The W6SAI HF Antenna Handbook", Hicksville, NY, U.S.A.: C Q Communications, Incorporated, 1996. ISBN: 0943016150 The magazine-sized softbound book is in fine condition, fresh and clean inside and out. Available for $9.

If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks.

Dave

RESCUE RADIO: HAM RADIO ASSISTS AT CALIFORNIA TRAIN COLLISION SITE

Amateur radio played a pivotal role following two major rail accidents occurring within a few days of one another. On Tuesday April 23rd, a Southern California Metrolink commuter train headed to San Juan Capistrano collided with a mile long freight train that may have missed a stop signal and wandered onto the same track. 2 people on the commuter train were injured and over 260 injured. Local hospitals were swamped with casualties. Joe Moell, K0OV, has more:

--

About four times a year, the hospitals and emergency responders in Orange County, California, hold large-scale drills to test the patient triage and transportation procedures that must be followed in the event of a mass casualty incident. The Hospital Disaster Support Communication System -- an ARES group with agreements to support all 35 hospitals in the county -- is always asked to participate. So it was on Tuesday, April 23 as two dozen HDSCS members awaited their assignments for a mock hazardous material incident, to be staged on a shopping street in Brea, California at 9 AM.

But it was not to be. At 8:10 AM, just 5-1/2 miles away in the city of Placentia, a 6000-ton mile-long freight train collided with a Metrolink double-decker commuter train. HDSCS hams were immediately assigned to the fourteen hospitals expected to receive patients. For the next 4-1/2 hours, a total of 28 hams provided vital links between these hospitals, the county's Central Point ambulance dispatch, and the county's Emergency Medical Service agency.

--
[sound bite 1]
--
Other traffic included verifying victim dispatch, locating victims, providing hospitals with information for inquiring victim families, and liaison with hams supporting the Red Cross. Within some hospitals, hams provided direct communications between triage areas, Emergency Departments, and Command Posts. Dennis Kidder WA6NIA tells how important this was at one facility:

--
[sound bite 2]
--
This was the 75th actual hospital communications emergency in the 21-year history of HDSCS. From Orange County California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this in a future Amateur Radio Newsline report. (ARNewsline™)

(Note: For more information about this organization and about effective ham radio support for hospitals, go to www.hdscs.org.)

**

RESCUE RADIO: HAM RADIO ASSISTS AT FLORIDA DERAILMENT

Ham radio also helped provided coordination of emergency services following a train wreck near Crescent City Florida on Thursday April 18th. The accident happened at about 5:15 P-M Eastern time. Billy Williams, N4UF reports from Jacksonville:

--

The accident killed four passengers and injured 159 other passengers. It happened after the engineer of an ill-fated Amtrak train saw damaged track and hit the emergency brakes.

Rescue workers say 21 of the train's 40 cars including 14 of the 16 passenger cars derailed. Seven flipped on their sides, lying along the mangled track in a zig-zag pattern. Some passengers escaped through windows, while dozens of were trapped inside for hours.

Soon after the accident Bill Krueger, KF4EJD, was on the scene and at the wreck site relaying information to hams associated with ARES. Other hams soon had portable stations operational at the Putnam County Emergency Operations Center and the Crescent City High School shelter. A secondary shelter at Middleton-Burney Elementary School was established to assist in moving the passengers.

At the peak of activity, about 400 people were sheltered at Crescent City High School where a triage center had been set up. Also, a group from the Northeast Florida Chapter American Red Cross headquartered in Jacksonville was sent to the scene. This included several Jacksonville ham radio operators and a Red Cross Emergency Response vehicle.

Two hospitals in Jacksonville were staffed by Duval ARES operators to provide status reports to medical volunteers who were ready to head to the site if needed. Their help was not required and the hospital ham stations were secured at 10 PM Eastern time..

Meantime., the Florida Crown Emergency Net was in operation on the W4IZ Repeater System which was linked to the KF4PXZ system in Palatka. The net was in session from 5:30 to after 11PM.

There were many hams who volunteered in this emergency. Far to many to list here. And they once again proved that ham radio was willing and able to help when called on.

For the Amateur Radio Newsline, I’m Billy Williams, N4UF, in Jacksonville Florida.

--

According to news reports, many of the train's 418 passengers were senior citizens traveling between northern homes and winter retreats. (N4UF, ARNewsline™)

**

REALLOCATION: FCC PUTS ARRL NOVICE BAND PROPOSAL TO PUBLIC COMMENT

Comments are due to the FCC by May 16 on An ARRL petition that would eliminate the 80, 40 and 15-meter Novice and Technician Plus CW subbands. The information is from an ARRL Bulletin. Amateur Radio Newsline’s Paul Courson WA3VJB, reports from the nations capital:

--

Designated RM-10413, the notice is aimed at reusing the current Novice spectrum in part to expand the 80 and 40 meter phone subbands. The ARRL's petition was filed in March asks the FCC to eliminate the Novice and Technician Plus Morse only subbands and divvy them up alleviate what the ARRL sees as overcrowding elsewhere.

If the FCC goes along, the current Novice and Technician Plus would be permitted to operate on the 80, 40, 15 and 10-meter General-class CW allocations at up to 200 Watts output. For General and higher class operators, the ARRL plan would implement changes in the 80, 40 and 15-meter phone bands, expanding phone segments for many amateurs.

But the ARRL petition goes well beyond just refarming the Novice bands. The

League also seeks FCC permission to use spread spectrum on 222 to 225 MHz. It also proposes to expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for United States territories that do not provide for mailing addresses. The ARRL also wants to incorporate into the rules a 1990 FCC waiver authorizing amateurs in specific areas of Colorado and Wyoming to operate on certain segments of the 33-cm band. Lastly, the petition asks that the government clarify rules to indicate that modulated CW is permitted for repeater station identification.

May 16th is the designated commentary cutoff date on RM-10413, and the FCC is expecting a lot of response on this one.

Paul Courson, WA3VJB, Washington.

--

And we at Amateur Radio Newsline want to know your position on the reallocation of the current Novice subbands? Do you like the ARRL proposal? Do you have what you consider a better one? Should the subbands even be re-farmed? We would like to hear from you. Please send us a short e-mail with your opinion and we will put some of them on the air in future newscasts. The electronic address is news;ine@arnewsline.org. (ARRL, ARNewsline™)

RADIO RULES: HAM PETITIONS FOR MANDATORY FIELD REPAIRABLE RIGS

How would you like to be able to take the cover off your radio and replace a plug-in highly complex integrated circuit, put the cover back on and have the radio work again. Kind of the way it was when tubes rather than solid state ruled ham radio. Well, that is what Nickolaus Leggett, N3NL, says hams should be able to do and he is asking the FCC to provide the rules to make it so. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Nikolaus Leggett filed his request to the FCC in February. After reviewing it, the Commission has assigned it as RM-10412 and has set May 16th as a commentary cutoff date.

What Leggett suggests is not really new. He believes that Amateur Radio operators should have a fighting chance to keep their own gear operational. He acknowledges that today's high tech equipment may not be component level serviceable, but he as asking the FCC to make mandatory certain key aspects of design so that a ham with a general knowledge of troubleshooting techniques might get a broken radio back in operation. Especially in time of a declared emergency.

--

Leggett: “What I proposed is that the Commission establish some sort of standards that would essentially establish that equipment be field repairable in some manner. Either it should have replaceable modules or replaceable circuit boards or parts on a circuit board should be spaced at a certain distance so that you can access them. There should be LED indicators on digital busses. There should be test points to take voltage and current measurements. In other words the equipment should be accessible for the Amateur to repair or modify it.”

--

Leggett acknowledges that should the FCC adopt his recommendations it will probably lead some makers of ham gear to drop out of the United States Amateur Radio marketplace:

--

Legget: “My response on that is to look at the QRP field. There is a very nice Single Sideband QRP transceiver kit, which costs about $700. It is fully field repairable. It is advertised allot in QST Magazine, and this indicates that there certainly are vendors in the marketplace who can come out with a nice piece of equipment; highly regarded; very well reviewed; and at a reasonable price that is field repairable.”

--

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW in Los Angeles.

--

You can hear lots more with Nickolaus Leggett on this weeks RAIN report. Take your web browser to www.rainreport.com or call area code 847-827-7246. Meantime, the manufacturers who supply ham gear are expected to file in opposition to the Leggett rule making request. (ARNewsline™, RAIN)

**

SPECTRUM USE: FCC ON AMTS AND DENIALS TO HAMS

The FCC has approved proposed rules allowing geographic based licensing of coast stations in the Automated Maritime Telecommunications Service, the primary user of the 219-220 MHz band. According to the ARRL Letter, the Commission also agreed to consider an ARRL petition for changes in the rules governing the secondary amateur allocation at 219-220 MHz.

Amateur use of the band within 80 kilometers of an the Automated Maritime Telecommunications Service or AMTS coast station is currently requires permission from the AMTS licensee. Industry practice has been to routinely deny such requests, regardless of channel separation.

Now, the FCC will consider whether AMTS licensees denying permission should be required to give a technical justification for the denial. This, in conjunction with the ongoing 3-G proceeding that's considering use of 216-220 MHz for new technologies. (ARRL)

**

SPECTRUM REALLOCATION: CONGRESS PROPOSES DELAY IN UHF CHANNEL AUCTION

Congressional lawmakers say that they plan to introduce legislation to delay indefinitely the Federal Communications Commission's June sale spectrum currently used by television broadcasters to wireless carriers. Amateur Radio Newsline’s Norm Seeley, KI7UP, Takes a closer look at what is about to transpire:

--

The proposed legislation is being sponsored by House Energy and Commerce Chairman Billy Tauzin and ranking Democrat Representative John Dingell. The current law requires the FCC to auction the spectrum used channels television channels 52 through 59 by September 30th of this year. But if Congress says O-K, the measure will eliminate the legal deadline in September for an auction be conducted. It will also tell the agency not to go forward with the sale slated for June 19th.

The anticipated congressional action is intended to give more breathing room for broadcasters to move off their current analog television channels. It would also give mobile telephone carriers more certainty about a date when they would obtain this spectrum so that they make available a number of new services.

So far, no one has gone to court to force the FCC to hold the sale.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More on this story in future amateur Radio Newsline reports. (Published news reports)

**

RADIO RULES: COURT SAYS OWNERSHIP CAPS ARBITRARY AND CAPRICIOUS

Another blow to those who support a cap on the number of media outlets any one company can own. This, as a federal appeals court rules in favor of easing an FCC regulation that bars a broadcaster from owning two TV stations -- known as a duoploly -- in a single market. That is, unless there are eight other broadcast TV stations in that same market.

The court held that the Federal Communications Commission was arbitrary and capricious in excluding cable companies and other media outlets from the eight outlet standard. The ruling also admonished the FCC for failing to back up its argument that diversity and localism are protected by broadcast stations alone.

The court stopped short of declaring the duopoly rule unconstitutional and throwing it out altogether. Rather it directed the FCC to rethink that part of the rule dictating what constitutes a broadcast voice in any given market. (Published news reports)

RADIO LAW FOLLOW-UP: TOWERS VS. BIRDS

The United States Fish and Wildlife Service believes that communications towers are estimated to kill 4 to 5 million birds each year. And the service says that these kills violate the spirit and the intent of the Migratory Bird Treaty Act.

Now, a new organization called the National Antenna Consortium has been formed. Its purpose is to help communications companies deal with bird kills and other vexing issues associated with tower construction.

The CGC Communicator reports the group held a meeting at the recent National Association of Broadcasters meeting in Las Vegas. Speakers included Andrew Skotdal of KRKO Radio and attorneys Barry Umansky and Fred Hopengarten, K1VR. More information is on the web at migratorybirds.fws.gov (CGC Communicator)

NAMES IN THE NEWS: KB0G SPEARHEADING LINUX

A alternative computer operating system now has a ham helping to develop it. Nate Dueher, WY0X, reports:

--

One of the worlds largest Linux organizations now has a ham radio operator as its leader. Bdale Garbee, KB0G, of Blackforrest Colorado, has been elected as the 2002 Project Leader for Debian Linux. Bdale, who is known by many hams for his excellent work on many Amateur Radio projects including the RUDAK system on board AO-40 has also been on the software development team for Debian Linux for many years.

Debian -- spelled D-E-B-I-A-N -- has excellent support for many popular ham radio modes including CW, RTTY, packet radio, APRS, PSK-31 and many others. It is a version of the Linux operating system known world wide as dedicated to free software, quality and even ham radio. Bdale's leadership skills should prove to be a match made in technology.

For the Amateur Radio Newsline, I'm Nate Nueher, NY0X, in Colorado.

--

More information on Debian Linux can be found in cyberspace at www.debian.org. (NY0X, ARNewsline™)

THE THANK YOU CORNER WITH ANY JAREMA, N6TCQ

Last week, Support Fund Administrator Andy Jarema, N6TCQ, presented the latest Newsline fiscal report. Andy is back with us this week to say thanks to those who supported Amateur Radio Newsline™ in the month of January. Here is N6TCQ:

--

In the month of January we heard from Benton Bonney, W4PE of Orlando Jodie Steggerda, N8ALJ of Champaign, IL. From California, we heard from GEARS, the Golden Empire Amateur Radio Society of Chico, as well as associate Joann Biegler, William Walters, WA2IBM of San Jose CARA, the Catalina Amateur Repeater Association Bruce Murray of Seal Beach and Jim Truran, KE6FNJ of Encino.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible. The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. (N6TCQ)

HAMVENTION 2002: ARRL DIGITAL VOICE FORUM

The ARRL Digital Voice Working Group will host a Digital Voice Forum at the 2002 Dayton Hamvention. The session will include presentations from experts in the fields of digital-audio hardware, software and other technical details. Applications from rag-chewing to emergency communications to digital audio broadcasting will be covered. The date is Sunday, May 19th at 10:15 at the Hara

Arena Meeting Room 1 immediately following the ARRL Forum. (ARRL)

**

INTERNATIONAL – UK: SPECIAL EVENT STATION GB2PK

On the international scene, word that United Kingdom special event station GB2PK will be on the air intermittently from the 26th of April for a month from the Porthcurno Telegraph Museum in Cornwall. The operation will use both vintage 1950’s military and modern ham radio gear. QSL as directed on the air. (GB2RS)

**

INTERNATIONAL – SOUTH KOREA: SPECIAL EVENT STATION HL17FCW

Also involved in a celebration HL17FWC. This station is on the air from South Korea to commemorate the 17th FIFA Football World Cup. QSL via HLZ0HQ. (GB2RS)

**

CONTESTS - WRTC 2002: UNITED ARAB EMIRATES TEAM INVITED TO 2002 EVENT

From the world of contesting, word that the WRTC 2002 Organizing Committee has decided to invite the A61AJ team from the United Arab Emirates to be the representative of the contesting community in the Middle East. According to a WRTC press release, the teams operating from A61AJ have achieved superb results over the past few years. WRTC planners say that this invitation seeks to recognize this fact. Team UAE will be led by Ali Al-Futtaim, A61AJ. Al-Futtaim is well known as the driving force behind the development of what is one of the premier contest superstations in the Middle East and Asia. (WRTC)

**

DX

In D-X, Cuban VHF DX’er Arnie Coro, CO2KK says over the VHF Reflector that six meters is, properly named the magic band. According to Coro, while testing a balcony mounted half wave dipole he heard VK2ZF calling CQ on CW several times near 50.106 MHz. Coro says that the signal was good copy with no signs of echoes. Arnie responded but with only two watts and a dipole, no Q-S-O was made. Coro says that if he had been running at last 5 watts and a beam, that contact would have been made. (VHF Reflector)

THAT FINAL ITEM: AN EDITORIAL - WHERE HAVE ALL THE NOMINATIONS GONE?

And finally this week, an editorial word about the Amateur Radio Newsline Young Ham of the Year Award. Here is our producer Bill Pasternak, WA6ITF:

--

Im going to start this commentary with one word: Help!

Why help? Well its now the end of April. The nominating period for the 2002 Amateur Radio Newsline Young Ham of the Year Award has been open since February 1st. We have announced it at the end of every newscast for almost three months. Sadly, to date, we have not received what we consider to be a single viable nomination. Not one!

Normally by now we have received at least a dozen or more nominations. As this is written, all we have are the usual letters asking that we enter a youngster in a contest that some think the award to be. To paraphrase one: “Our 5 year old just got her ham license so send a free radio.”

But that is it! And for the record; the Young Ham of the Year Award is not a contest. Rather its a way to honor the accomplishments of youth in ham radio. It has been that -- and only that -- since 1986.

The nominating period for this years award closes on May 30th. Just about 4 weeks from now. As it stands, there may be no Young Ham of the Year Award presented in 2002 unless we begin to receive valid nominations. And that is where you come in.

Do you know of a young ham -- age 18 or younger? One who has accomplished something really special using Amateur Radio? Well, what are you waiting for? Now is the time to nominate that person.

Does your radio club have a youngster who has been an outstanding member. Maybe one who does far more for the club that most of the grown-up hams? Again, what are you waiting for? This very moment is the time nominate that boy or girl.

How about that quiet young ham who is always willing to volunteer in public service events? You know; the one who does everything from organizing the communications to keeping the club repeater operating. Ill say it once again: What are you waiting for? Nominate that person.

I think you get the idea.

OK. How do you file a nomination? Simple. You go to www.arnewsline.org, scroll down to Young Ham of the Year Award. Click on the rules. Read them. Click on the nominating form. Download it. Fill it out and mail it in or e-mail it to us. Its that easy.

We at the Amateur Radio Newsline™ believe that the future of our hobby, our service and our nation is in the hands of the young. It will be the next generation of young hams who will be the technologists, public service leaders and political leaders of this new millennium. The Young Ham of the Year Award is one way to guarantee that there will be this “next generation” of ham radio leaders. By taking the time to nominate a youngster for this award, you take one step to help insure the future of Amateur Radio.

Thank you. Roy.

--

If the award is made this year, the youngster selected will receive a trip to the Huntsville Hamfest and a ham radio gift courtesy of Vertex Standard. He or she will also be treated to a week at Spacecamp Huntsville thanks to the folks at C-Q magazine. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™ Our e-mail address is newsline @arnewsline.org. Hi Folks,

I will hopefully be looking at a new HF rig in Dayton this year, but having been using my trusty TS-820S for so long, I've kind of lost track of everything new these days.

While Irealize there will never be any such thing as a perfect radio (or at least, not one that's affordable to mere mortals), I'd appreciate a few suggestions for rigs that will give me the following must-haves:

1) continuous receive from 500kHz o so up to 30 MHz and TX on all ham frequencies within that range

2) Some form of DSP--preferably in the IF, but good audio-level DSP would be OK if I hear enough good things about it.

3) AM as well as CW, SSB and FM.

4) Serial interface that works with my logger, DX Base and with contest loggers

5) Built in second VFO

I need to come down under $1K new for this, and so far, I've been looking long and hard at the Kenwood TS-570D(g). While it sure looks nice, I'm honestly wondering if I could do better for around the same money, maybe with an older but fully-featured used rig. The Icom

IC-746 also looks pretty good, but is the extra $$$ really worth it?

I'm strictly an SSB and digital-modes man so I don't need CW keyers/memories/filters, etc, but do need a way to narrow out and reject carriers and heavy adjacent channel QRM since I enjoy working DX and a few contests from time to time.

Thanks in advance to one and all. If replying by e-mail, please note the anti-spam reply-to e-mail address.

I'm a relatively new tech class ham soon to move up to general. After considering radios for my car, the best choice for my purposes seems to be the 706IIg, particularly because of its detachable face and coverage of multiple bands. The thing I'm not familiar with is its stock rx filters, compared to the optional ones, particularly for am (where no optional filter exists). I would like to use this mode, but have heard bad things about its rejection of nearby QRM.

This is the first time I've worked with this, so I'm not sure how it is setup stock. That is, how wide is its receive filter on AM or SSB without any additional filters? Particularly on am, since no accessory filter seems to exist. The radio will be in my car, so there won't be any cw, at least while moving.

My ideal setup would have one of the ssb filters (haven't decided which) in one slot, and a 6 khz filter in the other, but it looks like that won't happen, so I'm just curious what I can look forward to if I do end up purchasing this radio.

Any info is appreciated.

Ben

I have listings of 2m and 6m nets from around the country on my website. Please
take a moment to look at them by going to http://vhfradiobuff.tripod.com. If
you see anything that needs to be changed, or if you have any additions, please
let me know.

I currently only have listings of 2m SSB and AM nets, plus 6m FM, AM and SSB
nets. There are too many 2m FM nets that go on around the country to list.

hey peter
i am using an icom 706MrkII its a nice all in one radio but if all you
want is HF i would look at either the Icom 746(pro) or the kenwood 570 i
have a couple of friends who are just totally in love with it for HF work
has a really good front end on it and works well on CW
if you want to check out reviews and opnions go to www.eham.net and check

out the info there they have a spot where people can post and tell how the love or hate a given item
good luck

> 5) Built in second VFO
>
> I need to come down under $1K new for this, and so far, I've been looking long and hard at the Kenwood TS-570D(g). While it sure looks nice, I'm honestly wondering if I could do better for around the same money, maybe with an older but fully-featured used rig. The Icom IC-746 also looks pretty good, but is the extra $$$ really worth it?
>
> I'm strictly an SSB and digital-modes man so I don't need CW keyers/memories/filters, etc, but do need a way to narrow out and reject carriers and heavy adjacent channel QRM since I enjoy working DX and a few contests from time to time.

Hi

I'm looking for an extended TX mod for an IC910H. The mod found on the www.mods.dk site does not work.

Thanks in advance.

regards

Tony

To do what or to operate what mode ?

There are several free sound card programs to receive and transmitt the
digital modes here:

I was waiting to see if any AMer's would comment as I don't work AM

too much.
The stock filter for AM on the 706g is pretty wide. About 8-9 kc at 60 db down I think. The stock filter for SSB is claimed to be appx 2.4 kc "6db down", but in practice mine seems to be nearly 2.7 kc before you start to see a drastic cutoff on the high end. It's very close to my TS-830 in width, except the 706 has a tad more emphasis on the higher end of the audio spectrum. The 830 has a bit of a midrange peak that the 706 doesn't really have. The 706 is pretty flat across the spectrum looking at noise. You do have a stock radio narrow AM position if you hit the "FIL" button. But this filter is very narrow for voice. Probably ok for tight stuff though. With the "fil" off, and in the wide AM position, it is pretty wide. Some don't like it. Myself I do, as I only use the AM for SWL for the most part , and I like the better audio with the wide filter. I think there is a mod for a narrower AM filter setup, but I don't have the link for it. The "fil" button will really tighten it up, but it's almost overkill it's so narrow as far as voice. You will get fairly narrow communications quality audio with the "fil" on. It also works for FM. I don't use it much myself as I usually leave it wide for SWBC. I need a CW filter for mine. For SSB it's fine as is. I actually prefer a wider filter on SSB. The stock 706 SSB is just about right for my tastes. Has pretty good audio actually for a dinky radio. Receive too. MK

The Dutch Amateur Television Repeater PI6ALK will stop transmissions via Eutelsat-W2 per May 6. Tonight, Friday, May 3, we will "celibrate" the end of our transmissions. Everyone is invited to participate via chats on the TV screen, ICQ, Phone and Fax.
For info read the scrolling text on the websites:

www.pi6alk.nl
www.webcamsue.nl
www.mxstreamplanet.com
www.orac-fm.com

See you all there.

I corrected the date. Newsline said it was Friday May 1. Friday is May 3.

Amateur Radio Newsline™ Report 1290 - May 3 2002

**

SPECIAL NOTICE TO THOSE WHO ONLY READ THE PRINT VERSION OF THIS NEWSCAST

ARNewsline™ 1290 coverage of the flight of Mark Shuttleworth, ZS-RSA, is very audio intensive. This historic meaning of this story really cannot be appreciated in a print version. We strongly urge you this week to visit www.arnewsline.org, click on the newscast number, download the MP3 file and listen to a moment in history that was made possible by Amateur Radio. Thank you.

**

Amateur Radio Newsline report number 1290 with a release date of Friday, May 3rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Mark Shuttleworth comes on the air from the I-S-S and South Africa cheers. This story is first on Amateur Radio Newsline report number 1290 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: SECOND SPACE VISITOR OPERATES HAM RADIO FROM THE ISS

South African amateur researcher Mark Shuttleworth has made his way to the International Space Station and to ham radio. Amateur Radio Newsline's Roy Neal, K6DUE, has been following the mission and brings us up to date:

--

(STUDENTS CHEER)

MORE THAN 200 STUDENTS, IN SOUTH AFRICA, CHEERED THEIR NEW HERO, MARK SHUTTLEWORTH. THEY TALKED TO HIM VIA AMATEUR RADIO. NICE DX. ON THE FIRST CALL, THESE ARE STUDENTS IN CAPE TOWN, TALKING TO THE PASSENGER IN SPACE BY WAY OF HAM STATION VK5ZAI, IN AUSTRALIA.

(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)

MARK SHUTTLEWORTH HAS BECOME A HERO IN SOUTH AFRICA. TO QUOTE THE HEADLINES: “HE’S THE FIRST AFRICAN IN SPACE” AND HAM RADIO HAS ENHANCED THAT IMAGE.

USING ARISS -- THE AMATEUR RADIO ON THE INTERNATIONAL SPACE STATION -- WITH SPECIAL PERMISSION AND AN HONORARY LICENSE -- SHUTTLEWORTH LINED UP CONTACTS WITH HUNDREDS OF SCHOOL KIDS -- SCHOOL LEARNERS THEY’RE CALLED IN SOUTH AFRICA. HE ALSO MADE SOME GENERAL CONTACTS WITH HAM RADIO OPERATORS.

ON FOUR DIFFERENT DAYS, STUDENTS GATHERED AT FOUR SPECIAL SCHOOLS, STARTING WITH SHUTTLEWORTH’S ALMA MATER, BISHOPS IN CAPE TOWN. ALL TOLD, ABOUT A THOUSAND SOUTH AFRICAN STUDENT LEARNERS SHARED THE EXPERIENCE OF DIRECT CONTACT.

ON THE SECOND DAY SOME 300 STUDENTS GATHERED AT THE HAVENSIDE COMMUNITY CENTER IN DURBAN WERE TREATED TO SOME REAL TIME EXCITEMENT. SHUTTLEWORTH WAS NOT ON THE AIR AT THE APPOINTED HOUR! HE WAS BUSY COMPLETING A MEDICAL EXPERIMENT.

AN EMERGENCY TEAM WENT TO WORK. THEY CALLED RUSSIAN MISSION CONTROL, IN MOSCOW, NASA MISSION CONTROL IN HOUSTON, MARK SHUTTLEWORTH ABOARD THE SPACE STATION…AND THEY AWAKENED TONY HUTCHISON, VK5ZAI, IN AUSTRALIA BEFORE DAWN.

AT ONE POINT THE SOUTH AFRICAN COORDINATOR, RICHARD MILLS, WAS ON THREE PHONES AT THE SAME TIME. SOMEHOW IT WORKED AND LESS THAN HALF AN HOUR AFTER THE FIRST ATTEMPT THEY MADE CONTACT AND THE HAPPY STUDENTS CHATTED BRIEFLY WITH THEIR HERO IN SPACE.

ARISS PROVIDED TOP NOTCH GROUND STATIONS IN AUSTRALIA, SOUTH AFRICA AND THE UNITED STATES TO MAKE THE CONTACTS. ON THE AIR, MARK USED ONE OF THE ISS INTERNATIONAL CALLS, NA1SS. THE COMMUNICATIONS WERE FED AROUND THE WORLD AS A DONATION FROM WORLDCOM, THE INTERNATIONAL COMMUNICATIONS NETWORK.

MOST SOUTH AFRICAN RADIO AND TELEVISION STATIONS AND NETWORKS CARRIED THE REPORTS LIVE AND REPEATED THEM ON TAPE. NEWSPAPERS AND MAGAZINES GAVE THEM HEADLINES GALORE. IN THE UNITED STATES, CABLE NETWORK MSNBC CARRIED THE CONTACTS.

--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--

BEFORE TAKING OFF ON HIS SPACE FLIGHT, FOR WHICH HE PAID RUSSIA AN ESTIMATED $20 MILLION, SHUTTLEWORTH TOLD REPORTERS THAT HIS LIVE COMMUNICATION

REPRESENTS A MAJOR TURNING POINT FOR THE IMAGE OF SOUTH AFRICAN EDUCATION. THEN MARK SHUTTLEWORTH ADDED “THIS PUTS A GROUP OF OUR SCHOOL LEARNERS UNIQUELY INTO THE GLOBAL SPOTLIGHT OF SPACE EXPLORATION.”

AND THAT’S JUST WHAT HE DID, HOLDING CONVERSATIONS WITH STUDENTS WHO WON THE RIGHT TO ASK THEIR QUESTIONS IN A NATIONAL COMPETITION.
--
(STUDENT QUESTION AND SHUTTLEWORTH RESPONSE)
--
SPACE TRAVEL HAS BEEN A LIFELONG DREAM FOR MARK SHUTTLEWORTH. HE HAS SHARED IT WITH A VERY GRATEFUL SOUTH AFRICA AND IN THE PROCESS HAS GIVEN AMATEUR RADIO A MAGNIFICENT SHOWCASE TO THE WORLD.

FOR THE AMATEUR RADIO NEWSLINE, RN, K6DUE.

--

The crew's primary mission was to deliver a fresh Soyuz spacecraft to the I-S-S. This spacecraft remains available as an emergency escape lifeboat. (ARNewsline(tm))

**

HAM RADIO IN SPACE: SHUTTLEWORTH MAKES RANDOM CONTACTS

Mark Shuttlesworth was active on voice over North America from the International Space Station making random contacts. He used the standard space communications F-M channel pair 145.800 to transmit while listening on 144.490 MHz. One of those he spoke to was AMSAT North America’s Frank Bauer, KA3HDO. Mark’s audio was captured by Bruce Paige, KK5DO and posted to his website. Take a listen:

--
Shuttleworth: “Kilo-Alpha-3-Hotel-Delta-Oscar this is NA1SS. Do you copy us?”
(Response)
Shuttleworth: “Thaks very much for your help with the station on the ISS.”
--

Shuttleworth was only been heard using NA1SS. That’s a call assigned to the ISS. He’s not used his honorary South African ZS-RSA callsign. According to Miles Mann, WF1F, Shuttleworth worked many stations as he flew across the United States. This included school amateur radio club KB3BRT in Knoxville Pennsylvania. More next week. (ARNewsline(tm) with audio provided by KK5DO)

**

HAM RADIO IN SPACE: SHUTTLEWORTHS SPECIAL CALL

Before his flight, Mark Shuttleworth was granted a temporary honorary ham radio call to operate from the International Space Station. And while everyone who is assigned to the ISS has some form of ham radio certification, the call, ZS RSA, is a one of a kind. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, tells us why:

--

According to Deon Erwin, ZR1DQ, space visitor Mark Shuttleworth received all the information in Russia's Star City, from the South African Radio League, to study for his ham radio license and he was trying to fit these studies into his busy training schedule. However, there was doubt whether Shuttleworth would actually have the time to complete his ham radio exam due to the eight months it took to learn Russian and simultaneously completing his astronaut training.

So the Oakdale Amateur Radio Club near Cape Town, South Africa, negotiated with the South African licensing authority to grant Shuttleworth an Amateur Radio license in light of the tight schedule before the launch and in anticipation of him writing the test. The authorities agreed and awarded the temporary, honorary and very unique callsign ZS RSA. ZS is the prefix for South Africa' and R S A represents the nations name -- the Republic of South Africa.

Shuttleworth's callsign is only valid for three months. The licensing authorities did not assign a number to the callsign, as the numerals represent South Africa's provinces and geographic locations. And in the South African licensing system no separate callsign allocation exists for space communications.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ

--

The Oakdale Amateur Radio Club is located in Durbanville, a village which is about 30 kilometers North East of Cape Town. Durbanville is Shuttleworth's home town and where his family still lives. (ARNewsline with information from SAREX remailer)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the
Woodchuck Amateur Radio Club repeater serving Cleveland Ohio.

(5 sec pause here)

**
REPEATER LINKING: IRLP SURPASSES 400

Nate Duehr, WY0X, reports that the Internet Radio Linking Project or I-R-L-P has now exceeded 400 nodes. The latest list shows the number stands at 403 installed.

The Internet Radio Linking Project permits repeaters around the world to interconnect with one another using a Linux based computer and a simple computer to repeater interface. The system is secure against non hams penetrating it because of its propriority hardware and software made available only to licensed radio amateurs. In fact, it is the only Internet ham radio linking system permitted by the Australian government.

More information is on the world wide web at www.irlp.net. Be sure to look at http://status.irlp.net and http://maps.irlp.net to see if there is an I-R-L-P node near you (WY0X)

**

HAM RADIO IN SPACE: AMSAT-NA ANNOUNCES NEW SATELLITE PROJECT

AMSAT North America has started construction of a new low-earth-orbit communications satellite. According to the groups president Robin Haighton, VE3FRH, the satellite will be similar in size to the original AMSAT Microsat design, but will incorporate all new leading edge electronics and RF technology

The new satellite will be code named AMSAT OSCAR E or Echo until launch. It will contain both analog and digital VHF and UHF FM transponders similar to those carried on the UOSAT-OSCAR 14 and AMRAD-OSCAR 27 ham-sats that are currently in orbit. In addition, the new satellite will have the capability to host one or two other experimental payloads.

Haighton discussed the new bird at the organization's Board of Directors meeting held in Washington, DC, on April 20th and 21st. The spacecraft is now slated to be ready for launch in late 2003. AMSAT says that a number of affordable launch opportunities are being actively explored. (ANS)

**

HAM RADIO IN SPACE: KOLIBRI 2000 TO DE-ORBIT

The Kolibri-2000 Russian and Australian School Scientific Research Microsatellite is headed toward a fiery grave. Kolibri-2000, later named RS-21 was launched on March 19th at 22:00 UTC from the International Space Station and has been in orbit for the past 6 weeks. During that time Kolibri's has been sending back telemetry and digital voice recordings.

The low cost RS-21 satellite was designed for this type of short duration mission. Part of its job included analyzing particles using a very sophisticated a flux-gate magnetometer and sending that data back to Earth. But all of this will soon end as Kolibri-2000 will reenter the Earths atmosphere and burn up sometime between May 3rd to the 4th UTC time.

Since the RS-21 has solar panels to recharge it batteries, it should be able to continue to transmit data until re-entry occurs. To hear its last transmissions, keep your radio set to the satellites primary downlink on 435.335 MHz and secondary downlink on 145.825 MHz. Both frequencies operate CW and FSK and you might want to keep a tape recorder running to catch a bit of ham radio space history as the mission of Kolibri-2000 comes to an end. (WF1F, ARNewsline(tm))

**

ENFORCEMENT: OWNERS OF BROOKLYN REPEATER DON’T RESPOND TO FCC

The owner operators of a repeater in the New York City area have not yet responded to a letter of inquiry from the FCC and the agency wants to know why. So it has once again written to one of the pair of hams to demand an answer. The person posing the questions is Special Counsel Riley Hollingsworth, K4ZDH:

--

Hollingsworth: “We warned Thomas Batista, an operator of the KC2DDD and the N2IFU repeater -- the repeater alternately known by both of those call signs -- in Corona New York -- that we had nor gotten a response from him to our letter of February 15th. That letter concerned interference and allegations of no coordination.”

--

In earlier letters to Batista and Gerardo Arias regarding the same repeater, the FCC asked for an explanation of why the system input is on 143.020 MHz. This is a frequency not allocated for use by hams. (FCC)

**

RADIO RULES: XM & SIRIUS CONCERNED ABOUT OUT-OF-BAND EMISSIONS

The nation's two satellite digital audio radio service providers, XM and Sirius, are concerned that out-of-band signals from a variety of wireless devices. The CGC Communicator reports that the two worry that these services will eventually cause widespread interference to their program services.

Singled out as potential culprits are license-free Part 15 and 18 devices such as ISM, Bluetooth, IEEE 802.11b, home RF wireless devices, RF lighting, ultra-wideband devices and even Family Radio Service transmitters. The fifth harmonics from Channels FRS channels 8 to 14 fall within XM's passband but not Sirius's. More information is found at the FCC website under ET Docket 01-278, RM-9375 and RM-10051. (CGC Communicator)

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Its time once again to hear from our support fund administrator. Here’s

N6TCQ.

--

In the month of February we heard from The Montgomery ARC of Gaithersburg, MD; The Kanawha ARC of Charleston, WV; Michael Leahan, N9PQK of Sun Prairie, WI; Jay Underdown, W0PS of St. Charles, MO; The DuPage, IL ARC; Russell Lamb and the South Texas Amateur Repeater Society of Harlingen, TX, WH8H; The Steamboat Springs, CO Amateur Radio Association; regular contributor William Walters, WA2IBM of San Jose, CA.; The Kings ARC of Armona, CA; David Estrada, KD6HDX and the INLANDARS repeater system of Chino Hills, CA and the Xerox Amateur Radio Club in El Segundo, WD6CZH.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066. If you missed it, it will be given again at the end of this week's newscast.

I'm Andy Jarema, N6TCQ.

--

Also, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award closes May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org. (ARNewsline(tm) Support Fund)

**

EMERGING TECHNOLOGY: AUTOMATING NEWSLINE

Fred Vobbe of the National Radio Club D-X Audio Service says that he is now playing Amateur Radio Newsline automatically on his repeater. Fred says that he uses Echo Station software to automatically play this newscast every Saturday and Monday night at 7 P-M over his W8HDU repeater.

Fred’s machine operates 443.625 and is located in Allen County Ohio. More on Echo Station automation software is on the word wide web at www dot westmountainradio.com and click the link on the right side of the page that says Amateur Radio soundcard software presentation. (W8HDU)

**

EMERGING TECHNOLOGY: CALL 511 IN UTAH FOR TRAFFIC INFO

Travelers in Utah have a new way to get updates on traffic, and they can do it without having to watch television or listen to the radio. Instead, using a cellular phone, they can dial the nation's first voice-activated 511 travel service line.

Called Tellme, this is one of several free, voice-activated services known as voice portals.' Voice portals use speach recognition software to retrieve and translate information from the Internet. Taking their cues from spoken words, the services can dispense stock quotes, horoscopes, driving directions, sports scores and other widely sought information over any telephone.

Utah was one of six states selected to launch a 511 service after the Federal Communications Commission officially designated 511 as a nationwide number for travel information back in July 2000. Like the emergency number 911, the 511 systems are a public service and free. (Road Routes)

**

INTERNATIONAL: UK ANNOUNCES INTERMEDIATE LICENSE CLASS PLANS

The United Kingdom’s Radiocommunications Agency has announced details of the qualifications and examinations for the revised licensing structure for that nations Amateur Radio service.

A press release from the Radiocommunications Agency says that a new program of study for the U-K Intermediate license will be introduced early in 2003. This will be based on the current Novice syllabus but will exclude those topics covered in the Foundation License. The Radiocommunications Agency says that it plans to announce the course outline at least three months ahead of its introduction. It will be run initially as a pilot format similar to the Foundation pilot. Once the new syllabus is in force, a pass at Foundation level will be a pre-requisite to sitting the Intermediate Class U-K exam.

The new licensing structure was announced in September 2001. It’s first phase was the introduction of the Foundation License last January. This new ticket has been deemed to be a major success with over 1500 M 3 prefix Foundation Licenses having been issued. (RSGB)

**

DX

In D-X, what is believed to be the first 2-meter random meteor scatter contact has been made between Australia and New Zealand. Rex Moncur, VK7MO, in Hobart and Bob McQuarrie, ZL3TY, in Greymouth, on the west coast of the south island of New Zealand, made the contact on April 13th over a distance of 1950 kilometres using the W-S-J-T software. (Q-News, RSGB)

A bit lower in frequency, HC8N reports that the new QSL Route to him is Randy Becnel, W5UE, at Post Office Box 170, Kiln, MS 39556-0170 in the United States. Bechnel replaces Derek Wills AA5BT who is stepping down after 10 years of service and 50,000 QSL requests answered. (Various DX publications)

Also, Dennis Hanley, G3YVY, says that he has been informed that his callsign is being used on 20 meters. At present Dennis has no High Frequency equipment and says that has no immediate plans to become active on the H-F bands. (RSGB)

**

THAT FINAL ITEM: USA ARDF CHAMPIONSHIP WINNERS ANNOUNCED

And finally, who's the best in the country at finding hidden transmitters? Here's Newsline's Joe Moell, K0OV, with the results of a contest to find the answer, and an opportunity for your club to get in on the fun.

--

USA has just completed its second national championships of on-foot hidden transmitter hunting, also called radio-orienteering and ARDF. The event took place near Pine Mountain, Georgia, hosted by hams in the Georgia Orienteering club. Primary organizers were Laurie Searle KG4FDM and Sam Smith N4MAP. About two dozen of our country's best fox-finders went into the deep woods of Franklin D. Roosevelt State Park, trying to be first to find up to five transmitters and then navigate their way to the finish line. Their rewards: the possibility of a medal and a place on our country's team going to the ARDF World Championships in Slovakia this coming September.

The championships included two complete courses on consecutive days, the first on two meters and the second on 80 meters. Best performance overall was by Gyuri Nagi KF6YKN, who averaged 19 minutes per fox on two meters and an amazing 15 minutes per fox on 80 meters. Gyuri, whose other call is HA3PA, is a part-time US resident who learned the sport in his native Hungary. He competed in M21, the prime age division, requiring him to find five foxes on a six kilometer forest course. Gold medal winning hams in other age and gender divisions were Jerry Boyd WB8WFK, Valerie Meyer KG4QWE, John Munsey KB3GK, Debbie Pendley KD5LOK, Charlie Siler KO4NO, and Jack Stump KD5OEO.

Hidden transmitter hunting is a fast-growing activity in the USA, whether on foot like these championships, or in cars full of direction finding gear and computers. It's time for your club to give it a try. The perfect opportunity is coming May 11 and 12, which will be the fifth annual National Foxhunting Weekend, sponsored by CQ magazine. The May issue of CQ has all the details. On the Web, you can find lots of information on both the National Fox Hunting W and the just-completed national Championships at www.homingin.com. That's homingin -- one word -- homingin.com

From southern California, where every weekend is a transmitter hunting weekend, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

The next stop for the winners? Hopefully Slovakia and the world championships this fall. (ARNewsline(tm). K0OV)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us, support us or nominate someone for the Young Ham of the Year Award at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

(End Newscast)

RAIN PROMO: “This week on the Radio Amateur Information Network Hap Holly presents part 2 of his interview with Nicholas Leggett, N3NL. Leggett wants the FCC to mandate field repairable ham gear. Here more at www.rainreport.com or on the phone at 847-827-7246.”

Still nothing on Yaesu's website. I get the feeling the radio's a
hoax. A few doctored up pictures.. why wouldn't Yaesu have information
on it on their website? Who's ever heard of a modern HT with 6m AM?
And .3 watts for 220mhz? Has anyone at Yaesu admited that this radio
is in production or will be?

If the rig was a hoax then I doubt Yaesu would go to all the trouble of
getting FCC acceptance. Look here:

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/prod/oet/forms/reports/Search_Form.hts?mode=Edit&form=Exhibits&application_id=403116&fcc_id=K66VX-7R

I've lost the 2m/440 tip for the stock antenna on my VX-5R. Does
anyone know where I could look to get a replacement?

Thanks in advance...

73s,
Jim

The "hoax" should be in the stores really soon.  If it's worth anything,
that will be a different story..

After a couple of years of being off the air, I am dusting off and testing
my equipment.

I used to order HT batteries from an outfit call Periphex.  Are they still
around (the old URL does not work)?  If so, where can I locate them?  If
not, any recommendations for a replacement?

Thanks

I'm contemplating purchasing a Yaesu FT-847 for VHF/UHF work (since my TS-790 has decided to only work on the 440 band... :>)

Anyway, I was wondering if anyone might know the current production serial number sequence, since the price on this rig has dropped to $1200.00 now, I want to try to get one that was manufactured recently rather than NOS that may not be up-to-date with any improvements, fixes, etc.

Thanks and 73,

Dan - W6DKN

Hi Dennis,

Well, so far it looks like the 570D is in the lead, but my mind could be changed if I get enough input in any other direction. Of course, I'd love to go for the 746 Pro, but I just can't come up with that kind of money. At least not this year. I have a budget of about $1k for Dayton, and that includes all the doodads and nicknacks that I inevitably come back with. Since I'll also have to spring for a power supply (I hadn't figured that into the equation at first--I was under the impression that the radio worked on 110) and a speaker, I don't have any wiggle room, unless Uncle Powerball comes through :-)

Dennis Kaylor <k4oxg@tampabay.rr.com> said :

>hey peter
>i am using an icom 706MrkII its a nice all in one radio but if all you
>want is HF i would look at either the Icom 746(pro) or the kenwood 570 i
>have a couple of friends who are just totally in love with it for HF work
>has a really good front end on it and works well on CW
>if you want to check out reviews and opnions go to www.eham.net and check
>out the info there they have a spot where people can post and tell how
>the love or hate a given item

Hi All

I have a 1998 Ford Expedition that I would like to put a 2 meter radio in.
Can someone tell me the best position to mount the radio an antenna so that
I dont damage the SUV?

Thanks Carl

carl
i dont know the lay out of the SUV but i would suggest mounting it where the
ashtray is unless you smoke then  you can go with one of those radios that has
a removable face plate then mount the radio under the seat and the faceplate on
the dash somewhere
as for an antenna a 5/8 wave on a magmount on the roof would be good

radio:

where it is convenient and out of the way of ashes, spills, and water from
open windows

antenna:

dead center on the roof.............if you can't bear to put a 3/4" hole in
the roof, you don't really need a radio in the vehicle

One nice idea I saw with the Icom-207H (a dual-band rig) was to mount the
head up by the mirror.  They have a long cable available and the wire is
easily hidden in the molding, plus the 207's head is quite small.  There's a
picture at http://www.qsl.net/w8kea.  The guy who did it made a bracket so
the molding screws could hold it in place.

..

I agree....If you want to make the antenna work the best just drill the dang hole like a real man and live with it...Magmounts suck and they damage the paint. And glass mount antennas are even worse...

IMHO YMMV

Dan

I have been using a GAP Titan since they came out. Its a great piece of work. I regularly use it 6m to 80m. I understand some guys have had good success on 2 meters. I have use it on 160m but with a out of sight swr.

You should be more concerned about the top-heavy thing turning over.

I don't deal with the sub-compacts much, I have an Excursion.  ;^)  Anyway,
on the bottom of the dash is a small indentation.  Just below the pocket in
the dash to the right of the steering wheel.  Brake controllers are often
mounted there.  I mounted my radio there and mounted the brake controller to
another bracket connected to the radio bracket.  I then use a 2m magmount
that looks like a cell phone antenna.  I can hit all the repeaters I need in
about a 50 mile radius.  The newer magmounts have a layer of mylar over the
magnet, so it does not damage the vehicle.  My has worked quite well, and I
enjoy it quite a bit.  Good luck.

Comet and Diamond Antenna make mounts that attach nicely to the side lip of the hatch door. I've got two mounted near the top, on either side, and they work nicely. This area is black trim on my '97 so there is no paint to mar. Also, this mounting location is fine when you open the hatch, because the antenna lays out horizontally along the roof line, a bit outboard so it clears the roof.

I do not drive an SUV. This is what worked in my Camry. I was able to slide a peice of thin brass into the space below the AC vent in the center of the dash and bend it down and secure it with some velcro, then I mounted the control head of my FT 8100 (Dual Band) on the brass, I then mounted the radio under the seat.

back in the early 80's, we were putting radios in new LTD squad cars

the city insisted on having the antennas mounted ON the light
bars.............well, there was about 3 extra feet of light bar cable left
over, so the install guy made a loop around the 'computer' (actually, the
ignition module) on the left inner fender

all was well until a car was going balls-to-the-wall to an accident one day,
the driver hit the button on the mike, and the ignition died, just like
you'd turned the key off

only on one channel of the radio, and only at wide-open throttle

but boy, did we have fun 'diagnosing' the trouble...........we must have
used 5 tanks of gas 'trying to duplicate the problem'..........

6 meters in an HT will not work. You need more than 5 watts and you need more than a rubber duck. I live in an area in which I only have to deal with a few hills. I have an HT with 6 meters (Have had it for years) I just does not word, I have a repeater less than two miles from where I live and I can not get into it because it is on the other side of a peak. Even when 6 is open and HT will not work. The only reason companies put 6 meters into and HT is for marketing.

Carl:
You might consider something innovative as I had to do on a lease vehicle. I have a 99 Explorer (Limited) and there is NO spare space , so I made up two inverted "J"
brackets; bolted them to the mobile mount bracket, mounted the bracket to the bottom of the radio and hung it from the center console(open the console, hang it on and close the cover). No holes to drill, easily reachable/readable and when I leave the vehicle for an extended period, I open the console; raise the radio up and slide it under the seat. Works for me! If you're interested,
e-mail me direct and I'll tell you about the "no holes visible" roof mount I made! G.I. ingenuity!

Amateur Radio Newsline™ Report 1287 - April 12 2002

(Note: Producer Bill Pasternak, WA6ITF is away on business this week.
ARNewsline™ Report 1287 was produced and recorded in New Orleans Louisiana by

Don Wilbanks, KC5MFA)

Amateur Radio Newsline report number 1287 with a release date of Friday, April 12th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Another threat to the 2.4 Gigahertz band. This time it comes from the FCC. That story is first on Amateur Radio Newsline report number 1287 coming your way right now.

(Billboard Cart Here)

**

RADIO LEGISLATION: FCC PROCEEDING PUTS NEW PRESSURE ON AMATEUR MICROWAVE BAND

The FCC has again targeted Amateur Radio's primary allocation at 2390 to 2400 MHz for possible sharing or use by other radio services. Newslines Norm Seeley, KI7UP, has the details:

--

According to the ARRL Letter, a Notice of Proposed Rulemaking known as WT Docket 02-55 has been presented by the FCC. The Letter says that it invites comments on either sharing the 2390 to 2400 MHz band with public safety services being displaced from 800 MHz or moving amateurs elsewhere.

The N-P-R-M identifies 2390 to 2400 MHz as an "Unlicensed P-C-S Band." Unlicensed, asynchronous P-C-S devices were authorized there in 1995, but Amateur Radio remains primary.

Why the action now? The FCC says that its receiving an increasing number of reports of incidents of harmful interference to public safety systems in the 800 MHz band. To alleviate the problem, the Commission now is looking into restructuring 800 MHz and moving some occupants elsewhere. And 2390 to 2400 MHz could be where those users get moved.

But says the FCC, that’s only one piece of spectrum being considered. One place its not looking is the adjacent 2385 to 2390 MHz band. The FCC says it can’t consider 2385 to 2390 MHz because that part of the band is slated to be auctioned off.

This is the second threat to the ham radio allocation in less than a year. Just last summer, the FCC invited comments on its proposals to reallocate some spectrum in the 2390 to 2400 MHz amateur segment for possible use by unspecified mobile and fixed services. The Commission has also proposed 2390 to 2400 MHz and other bands to support the introduction of advanced wireless systems, including so-called third-generation or 3 G mobile systems. The FCC also has asked for comments on whether amateurs could share the band with government users.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

WT Docket 02-55 was released in mid-March but not yet available for public response. The FCC will officially invite comments for 30 days after the NPRM is published in the Federal Register. Reply comments will be due 60 days following publication in the Federal Register. The ARRL says that it plans to file comments in this proceeding. (ARRL)

**

RADIO LAW: FCC MAY MANDATE FASTER CONVERSION TO DTV

Federal regulators may look for ways to mandate faster transition to all-digital television if the TV industry fails to move quickly enough on its own. This, according to a Federal Communications Commission official speaking on Friday April 5th.

The comments are from Ken Ferree, chief of the FCC's Media Bureau. And what he has said adds emphasis to a proposal by the agency's chairman that aims to bring digital TV to more American viewers.

FCC Chairman Michael Powell has challenged everyone involved in the digital conversion, including television networks, local network-affiliated stations, cable and satellite service providers and equipment manufacturers to voluntarily meet a series of goals on the way to a 2006 deadline.

Accordng to Ferree, Powell's proposal, which was sent to Capitol Hill and the industry on Thursday April 4th is an effort by the FCC to pressure the industry into voluntary compliance. He says that Chairman Powell believes exposing more consumers to the technology of digital television will stimulate them to demand more and thus jump-start development. (Published report)

**

FCC TO UTILITY: STOP INTERFERING WITH HAM RADIO

The FCC has told GPU Energy Corporation of Morristown, New Jersey to clean up the harmful interference that the utility is causing to several area radio amateurs. In a letter to GPU Energy the FCC said that incidental interference from its Part 15 devices to operations of authorized stations cannot be tolerated and that use of the devices cannot resume until the harmful condition is corrected.

According to the W5YI Report, those hams complaining have been unable to find a satisfactory remedy through the GPU complaint resolution process. They turned to the FCC which investigated. Now the FCC has told GPU that unresolved interference complaints may constitute a rules violation that could lead to fines. The FCC urged GPU Energy to contact the ARRL for advice in resolving the issues. (W5YI)

**

INDUSRTY NEWS: NEW DEALER & MANUFACTURERS GROUP FORMED

During the informal annual industry meeting of Amateur Radio manufacturers held in Milwaukee, Wisconsin and hosted by AES during Superfest 2002, the industry decided to create a formalized and official industry group for dealers and manufacturers.

The American Association of Radio Enthusiasts (AARE) was formed as a non-profit corporation for the promotion of amateur radio and emergency communications into areas outside of amateur radio and to provide a conduit for dealers and manufacturers to exchange ideas, to work together on projects, to help ham radio grow and to double the number of hams in 5 years.

Members of this group will be the manufacturers and dealers of radio and emergency products. The group will be ‘the voice’ of the manufacturers and dealers in radio, much like the American Radio Relay League is the voice of each ham radio operator. (AARE)

THE CONVENTION SCENE: HAMFESTS ARE SAFE

The ham radio convention season is in full swing, but some radio amateurs are asking if it’s safe to attend them. President Bush says that we have to put 9/11 behind us and all Americans have to resume normal life. Most of us have, and the shows are going on. But regardless if it’s the OSCARS or a tiny hamfest, event planners are now taking a closer look at show security. This includes the giant Dayton Hamvention. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, looks at what they are doing to keep you safe as you enjoy ham radio’s greatest show on Earth:

--

If you travel by air, or even visit your local police department, you have seen heightened security measures in place since the terror attacks of last September 11th. And while nobody expects an al-Quida sponsored assault on a hamfest, law enforcement and planners of even the smallest events cannot dismiss the possibility either.

A few weeks ago, the Dayton Hamvention mailed out a promotional flyer. One of the items it contained was an area dealing with show security. In reality, what was shown is nothing more than an update to what’s been in place for several years, but as the magic weekend of May 17th to the 19th approaches, its important to take a look at what the Hamvention will be doing to make your stay safe and secure.

The rules in effect are the same we have all been living with since 911. Be prepared to show photo I-D upon request. Also be prepared to have vehicles, merchandise and personal items searched. This may be especially true of large containers such as backpacks.

Do you carry a weapon for self protection? Sorry, but no weapons will be permitted into the area. Hamvention says that even applies if you have a license to carry a concealed weapon. Leave the weapon at home. You won’t be permitted in with it.

Nor can you bring in any ammunition, explosives, chemical or incendiary devices. Also banned are alcoholic beverages, drugs and burglary tools.

This year there will be tighter scrutiny of vendors as they bring truckloads of merchandise into the flea market and exhibit halls. Since most of you will arrive well after merchandise is in place, this will have little impact on the average attendee.

And very important. Everyone must display at all times, so it's clearly visible, a Hamvention badge or ticket.

For the Amateur Radio Newsline, I’m Henry Feonberg, K2SSQ.

--

Garry Matthews, KB8GOL, is Executive Director of Hamvention 2002. He recently told CQ Magazine that the planners are trying to take common-sense precautions to provide security for a show of this size. Matthews adds that 99% of Hamvention attendees will not notice anything different from past years. The most important thing is to know that Hamvention 2002 and every other ham radio show is doing everything to keep you safe. (CQ)

**

THE CONVENTION SCENE: NO BIG ACTS AT HAMVENTION 2002 BANQUET

Speaking about Hamvention 2002, the planners say that you have spoken. As a result there will be no big name acts at this years grand awards banquet. Jim Graver, KB8PSO, is the General Chairman of Hamvention 2002:

--
Graver: “This year we are returning to tradition of years past and will not have a post banquet entertainment.”
--

A few years ago, the Hamvention added concerts by top talents to its famed Saturday night gathering. Among those who have appeared are Joe Walsh and the Smothers Brothers. And even though the entertainment has been well received, there has been a call from the ham community to get back to basics. And says

Graver, so it shall be.

--

Graver: “We have gotten feedback from our attendees saying that they would like to have the same banquet that they used to have years ago. So, in 2002, the Hamvention is going to deliver just that: A banquet with great food, a celebration of the award winners, fantastic guest speakers and of course prize drawings.”

--

Jim Graver has a lot more to say about Hamvention 2002 and what will be happening this year. You can hear it in Part 2 of Hap Holly’s exclusive interview with KB8PSO. Just take your web browser over to www.rainreport.com and click on this weeks special. Or call area code 847-827-7246. That’s 847-827-R-A-I-N. (ARNewsline(tm))

**

RADIO LAW: DIREC-TV SUES RADIO PERSONALITY OVER ALLEGED SIGNAL PIRACY

DIREC-TV Inc. is taking a New York City radio personality to court. This as it files suit against WFAN radio personality Sid Rosenberg alleging he violated the Digital Millennium Copyright Act and the Federal Communications Act by stealing its programming.

DIREC-TV says that on March 11th, while talking with Don Imus on the "Imus in the Morning" show on MSNBC, Rosenberg allegedly said he had used an illegally modified access card to steal DIREC-TV.

Although air personality Imus is said have told him what the was doing is "dishonest" and constitutes "stealing," Rosenberg allegedly continued to "boast" about using the illegally modified access card to watch movies and sports.

DIREC-TV says that with this lawsuit it is sending Mr. Rosenberg a very clear message. One that says using an illegally modified access card to receive DIRECTV programming is stealing and it violates federal law. Larry Rissler, vice president of DIREC-TV's Signal Integrity office adds that the company has a transcript of the program and what he calls Mr. Rosenberg's brazen comments on national television of stealing DIREC-TV programming. (DIREC-TV release)

NAMES IN THE NEWS: STEVE DIMSE K4HG HONORED BY NOAA

The National Oceanic and Atmospheric Administration has named Steve Dimse, K4HG, of Tucson Amateur Packet Radio, as recipient of one of its Environmental Hero Awards for the year 2002. Dimse, of Cudjoe Key, Florida is being honored for his volunteer efforts in real-time citizen weather observations.

The data collected by Dimse and other volunteers is used for numerical weather prediction research at NOAA's Forecast Systems Laboratory and for training and research at the National Center for Atmospheric Research. In Florida, the data is used by National Weather Service’s Weather Forecast Offices for local area prediction. It is also used at Kennedy Space Center for weather prediction in support of launch operations.

Each year the agency presents a number of Environmental Hero Awards to people who don't work for NOAA, but have contributed a great deal to NOAA's ongoing job of providing environmental services to the citizens of the United States. For 2002, Dimse was one of five people chosen for this honor. (NOAA)

NAMES IN THE NEWS: GM3ITN INVITED TO FAULKLAND ISLANDS

Les Hamilton, GM3ITN, has been invited by the Falkland Islands government to visit the islands for the 20th anniversary of their emancipation. Hamelton played an important role in making the liberation happen. Jeramy Boot, G4NJH, has more.

--

It was Les Hamilton who first informed the UK government that the islands had been invaded. On the 2nd of April 1982, he received first-hand reports that the Argentine flag was flying over the islands. Les was therefore the first person outside the islands and Argentina to know that an invasion had taken place. He phoned the Ministry of Defense, who informed then Prime Minister Margaret Thatcher.

GM3ITN remained in contact with VP8 stations even during the period of occupation, passing vital information on to the MoD. Les and his wife Pilar also intercepted Argentinean radio communications, which Pilar - a university lecturer in the Spanish language - translated for the MoD.

Jeramy Boot,G4NJH.

--

The Hamiltons will be flying to Port Stanley for the 20th anniversary celebrations which take place on June 14th. Until recently, Les Hamilton's role had been a closely-guarded secret, known only by senior British politicians, military intelligence officers and a select group of radio amateurs. (GB2RS)

HAMVENTION 2002: THE HARA ARENA STORY

Earlier in this weeks newscast we spoke about plans for this years Dayton Hamvention. As most of you are aware, Dayton’s HARA Arena has been the home of the Hamvention for many years. As a result the HARA has become as famous as the show it hosts. But there’s a lot more to the HARA story than just the Dayton Hamvention as we learn from Amateur News Weekly’s Jack Parker, W8ISH:

--

The HARA Complex is as unique as its history. In 1956, a dance hall called the Wampler Ballarena was built as the cornerstone of what is now a six building exhibition center. Originally, the location was a thriving, family-owned fruit orchard. Today it is a thriving, family-owned entertainment, conference and exhibition facility.

Very few entertainment complexes are privately owned. Even fewer are family owned. You see HARA was named by founding brothers Harold and Ralph Wampler. The arena building, built in 1964, ushered in entertainment to the Dayton area never seen before. The Rolling Stones, Elton John, The Who, Neil Diamond, The Beatles, The Grateful Dead have all played at the facility.

The HARA has survived and prospered by combining the professionalism of one of the areas largest exhibition centers with the care and personal concern of a family business. Because of this the HARA has been the catalyst to successful hockey in Ohio's Miami Valley. The Dayton Gems and later, the Dayton Bombers, have both enjoyed success while on the HARA ice. But, most agree, the one event that has put HARA ARENA on the map worldwide, is the Dayton Hamvention. It’s where the Amateur Radio Community and a family owned business meet to carry on a wonderful tradition.

For Amateur News Weekly, Im Jack Parker, W8ISH

--

Today, the HARA Arena remains the home to many high profile events for the Dayton area. This includes Disney On Ice, Sesame Street Live, the Silver Sticks Hockey team and of coarse the Dayton Hamvention. And, contrary to rumors on the Internet, the Hamvention says that it’s there to stay. (ANW)

EMBARRASSING TECHNOLOGY: SPYWARE DEBACLE DISCLOSED

Call it a gotch’ya. This as thousands of Internet users who thought they were installing a program for sharing music and other computer files apparently accepted a program at the same time that tracked their Web surfing habits.

The tracking program, or spyware, linked Internet users to an on-line sweepstakes game called Click-Till-U-Win. But the site was also collecting data on other recent cyberspace visits by the surfer’s computer.

Spyware is a clandestine computer program downloaded to your computer without your knowledge that can track your Internet-surfing habits without your consent. These types of programs exist in the open elsewhere on the Internet, but in this case there was no disclosure and no option to reject.

Now at least three companies are posting new versions of their software on the web without the tracking programs. And one of the web sites is actually offering visitors to its site an apology. (Computing Technology)

INTERNATIONAL - UK: BRITISH HAM RESCUED BY HAM RADIO

Turning to international news, word that a ham radio operator and his wife on board a yacht that ran aground have been rescued. This, thanks to the efforts of radio amateurs on the Maritime Mobile Service Net.

According to reports from the ARRL and GB2RS, Dave Beane, G0TAG, and his wife Sara, were aboard the pleasure craft Tao when it ran aground on a reef off the north coast of Cuba on the 26th of March. Apparently their initial call for assistance to the Cuban authorities had no response.

So they turned to ham radio and the 20 meter Maritime Mobile Services Net. Radio amateurs in the United States and in the Virgin Islands were able to alert the authorities in Havana via the US Coast Guard and the Swiss Embassy in Washington. Later reports via amateur radio indicated the couple had been rescued and that efforts to salvage the vessel were under way. (ARRL, GB2RS, Q-News)

**

SPACE AND SCIENCE: SPACE REFERIGERATOR

SpaceDaily reports that when Space Shuttle Endeavour blasted into space recently it carried aboard the world's smallest version of a relatively new type of refrigerator. Called a pulse-tube cryocooler, the device was designed, built and tested under an agreement between the National Institute of Standards and Technology's Boulder Laboratories, Lockheed Martin Corporation and NASA's Ames Research Center. (ANS)

A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D SERVICE - PART 3

Over the past two weeks, Amateur Radio Newsline’s David Black, KB4KCH, has been looking at the not so political side of 11 meter Class-D C-B. In this third and final installment, David explores the reasons that there is little chance of C-B ever becoming a major two way radio political power:

--

The Citizens band radio service has a unique distinction. For all the years it has existed...for all the people who have bought and used 11 meter radios...for all of the public exposure CB has obtained TV, radio and the movies, 11 meter Class D C-B remains the only major radio service in the U-S without political representation in Washington. No support either before the FCC or Congress.

In the mid 19-70s, the Government held conferences to find better ways to use C-B. Today's Government leaders give it no attention. Congress and local governments are tired of consumer complaints against C-B operators running illegal power and who interfere with all sorts of consumer electronic gear. As a result, federal regulations are now in place that give almost any law enforcement official the ability to shut a C-B operator down. The C-B operator can appeal, but it is a long, and costly process.

So why is nobody on 11 meters seriously attempting to organize users of the band? As one former CB enthusiast suggests: Perhaps it's the sheer diversity of the CB radio community. CB has over-the-road truckers, sidebanders, emergency monitors, numerous private nets, the occasional family highway trip, and the usual assortment of troublemakers. Each of these groups operate separately and independently of the others with apparently little knowledge or regard for other uses of the band.

Whatever the real reason or reasons, one simple fact remains. When it comes to having a voice before the FCC and Congress, CB radio is out in the cold. Chances seem slim it will ever have such a voice. And without that, C-B operators like Gary D. White in Illinois are likely to continue to face Disorderly Conduct charges for disturbing anyone by transmitting on the 11 meter Class D Citizens Band.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

In closing, a word to those who have written. Some with questions. Other to add their own commentary. We sincerely appreciate your taking the time to write. You perspectives have been included in this final wrap-up. We thank you for your help in telling the story. (ARNewsline)

I drive a 4-Runner.

The control head is mounded on the console with double sided tape for the
bracket.
The RF deck, which is mounted on an Aluminum plate goes under the seat.
I was going to put some velcro on the bottom to keep it from sliding, but
never found a need.

Yes....do you have access to the attic? If so, what size is it and what bands
do you want to work? I used to live in apartment and worked 10M DX on a dipole
strung across the bedroom from a curtain rod to the headboard on the bed.

You might want to get the ARRL repeater directory and see if there are any 6m repeaters in the area you're looking at. If not then I think 2 is a better choice. The problem is that a basic rubber duck on an HT is very inefficient, especially on the lower frequencies. If you do decide to go with 6, try and find an aftermarket replacement antenna. I have a portable 6m rig that can run 1 watt on C cells, and the telescopic whip is about 2 1/2 feet long. I can hit my local repeater with it (about 15-20 miles). But with a rubber duck I doubt I could hit that machine. ADI/Pryne makes a 6m HT, I don't know of any other single-banders on the market.

Hi all!
I purchased (about 9 months ago) a Yaesu FT-100D (with seperation
kit), the FC-20 auto-tuner and the ATAS-100 screwdriver antenna for a
project I'm never going to get around to. And now I have the hots for
a FT-817 and associated goodies.
So, if anyone is interested in the mint setup described above, and
wants to buy it, or swap for it, email me at snelson@kay-com.com.
I should ad that the rig and tuner have been used about 5 or 6 times
(not over 5 wpm!), and the antenna never.
Thanks!
Sam, WA5VDM

Hi there and thanks for reading this!

I am looking for some help in solving the following problem on an Icom IC-2710H dualband mobile radio;

The radio will only TX on VHF. The UHF frequencies can be dialled up but that band cannot be selected as the main band and hence no Tx. When coupling another IC-2710H control head to the radio, the UHF band can be selected as the main band, so I suspect something has been done to the other's control unit. I have tried a CPU reset to no avail.

Any ideas as to how I can fix this??

Thanks in advance!

Regards.

A possibility is the band switch button has gone bad??

That would be the only thing I can think of.
Don

Amateur Radio Newsline™ Report 1288 - April 19 2002

Amateur Radio Newsline report number 1288 with a release date of Friday, April 19th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur Radio volunteerism is praised at the N-A-B Ham Radio Reception and a Montana senator calls for a change in the way the United States oversees the electromagnetic spectrum. These stories are first on Amateur Radio Newsline report number 1288 coming your way right now.

(Billboard Cart Here)

**

AMERICA AT WAR: HAMS PRAISED AT NAB AMATEUR RADIO MIXER

The heroism of ham radio operators who donate their services in times of national disaster, and especially those who volunteered in the days following the 911 terrorist attacks was not forgotten at this years National Association of Broadcasters Ham Radio Reception. The April 10th gathering was co-hosted by

Kenwood Communications and CQ Magazine. It was CQ publisher Dick Ross, K2MGA, who took time to honor those hams who put their lives on hold, to be there when needed:

--

K2MGA: “I do want to take a moment to focus a little bit of attention on how proud we have a right to be as Radio Amateurs. I think we saw that on September 11th, when thousands upon thousands of hams throughout the United States jumped in their cars -- or -- in the New York are -- hopped onto the subways -- with back packs filled with radio equipment and did whatever they could. They are still doing ‘whatever they can,’ and that is really what Amateur Radio is all about.”

--

Ross comments were enthusiastically received. CQ was represented at the gathering by Ross and Editor Rich Moseson, W2VU. Also making presentations were Kenwood’s Paul Middelton K4NUH and ARRL President Jim Haynie, W5JBP.
600 to 800 radio amateurs who attended the NAB convention also usually show up at the Ham Radio Reception.

**

SPECTRUM ISSUES: SENATOR TO ASK FOR COMPLETE SPECTRUM REVIEW

A U-S Senator says that its time to overhaul the method by which the United States manages the entire electromagnetic spectrum. Montana Senator Conrad Burns, said on Monday, April 15th that he plans to introduce such legislation. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

Senator Conrad Burns says that he expects a two to three year battle over the legislation he plans to introduce this congressional season. But Burns also told a packed audience at the recent National Association of Broadcasters Convention in Las Vegas that he is going to put together a total spectrum reform bill because he does not think that Congress should be piecemealing how it makes spectrum available.

Senator Burns told the NAB audience that he predicts an intense battle over the legislation affecting multiple constituencies. He noted that many frequency bands are used by government agencies like the Department of Defense Department. Burns said that he is still awaiting a report from the General Accounting Office which is reviewing a large number of spectrum issues and related government practices.

And what does this mean to ham radio? In the short term probably very little. In the long run it could affect our future survival.

Depending on the scope of the Burns legislation and how much of it -- if any -- is ever enacted by Congress, the future use of all spectrum could well come under a bureaucratic microscope. Those services that legislators do not feel justify spectrum could -- eventually -- loose it.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP

--

Earlier plans to move some government operations to other spectrum now have little support in the wake of the September 11th terrorist attacks. Meantime, numerous telecommunications companies are pressuring the government to make large portions of spectrum available quickly, to introduce new consumer wireless services. (Published reports)

**

HAM RADIO IN SPACE: NEW FRENCH HAMSATS COMING

AMSAT has announced that two new French Amateur Radio mini satellites or picosats are planned for launch on May 3rd. This, as secondary payloads with the SPOT-5 satellite.

The two hamsats are being funded, designed and built by AMSAT-France. They are battery powered and should operate from orbit about 40 days. Both will transmit recorded voice messages using Narrow Band FM along with digital telemetry. Data will be transmitted at 400 baud BPSK. Downlink frequencies are listed as 145.84 MHz and 435.27 MHz.

An Ariane 4 booster will carry the satellites to orbit but the ham radio birds will not be free floating. Rather they will remain fastened to the Ariane's third stage at a panned altitude of about 800 kilometers. Both of these new birds will switched on about ten days after the launch. (ANS)

**

HAM RADIO IN SPACE: AMSAT-NA TO RE-EVALUATE THE FUTURE

Meantime, AMSAT North America President Robin Haighton, VE3FRH, has called a special Board of Directors meeting for April 20th. This, to review the current fiscal situation and to decide on a proper course of action for upcoming ham radio space projects.

In a published column earlier this year, Haighton had commented that financial support coming to AMSAT for the Eagle satellite and other projects have been reduced as a result 911. Haighton now says that this continues to be the case.

Haighton does say that the design of another satellite called Echo is progressing and he should have more information to make public next month. The AMSAT North America president adds that the organizations forum at the upcoming Dayton Hamvention will offer a closer look at several proposed satellite projects. (ANS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N-4-G-G-D Repeater serving Greensboro North Carolina.

(5 sec pause here)

**

ENFORCEMENT NEEDED: WORLDWIDE QRM TO 40 METERS

The March issue of the Monitoring System Newsletter talked about a rogue broadcast from Eritrea on 7.100 Mhz. A transmission that continues to be heard well in eastern North America.

According to the IARU, this broadcast can at times also be heard around the world. Also, the report says that its lower sideband can dominate the top few kilohertz of the 7.000 to 7.100 MHz Amateur band. (ANS)

**

ENFORCEMENT: FCC ARRESTS NYC UNLICENSED BROADCASTER

An unlicensed broadcaster has been arrested for refusing to shut down operations. Paul Dorleans was taken into federal custody on April 15th for operating an unlicensed FM radio station on 87.9 MHz in Brooklyn New York.

The FCC says that earlier enforcement actions had failed to discourage Dorleans' unlicensed operation of the FM Station. The FCC, on more than one occasion, had issued notices to Dorleans directing him to cease operation. And the U.S. Marshal's Service, in conjunction with the United States Attorney's Office and the FCC, had seized his radio equipment on one previous occasion.

The United States Marshals Service arrested Dorleans working in conjunction with FCC Agents and the Office of the United States Attorney for the Eastern District of New York. So far this year, investigation of unlicensed broadcast operation by the FCC's Enforcement Bureau has resulted in the shutdown of over 20 unlicensed stations. Dorleans faces the possibility of a heavy fine and a prison sentence if convicted. (FCC Release)

**

ENFORCEMENT: FCC TO UTILITIES - DON'T INTERFERE WITH HAMS

The FCC has issued letters to five power utility companies to request that they contact and work with Amateur Radio operators in the area to resolve power line interference problems. According to FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth the utility companies are:

--

Hollingsworth: "Anderson Indiana City Utility, the Dominion Power Company in Richmond Virginia, Northeast Utilities in Berlin Connecticut, Southern

California Edison in Rosemont California and the Soccoro Electric Co-Op in Soccoro New Mexico.”
--

Hollingsworth says that the companies were instructed to report back in 90 days to outline the progress made in clearing these interference complaints. (FCC, RAIN)

**

SPECIAL COMMS: RADIO SOLO NOW ON THE GROUND

The United States military broadcasts to Afghanistan are still being widely heard on 8.700 Mhz, but are now land based. The broadcasts are being produced by the same unit that produced the Commando Solo airborne transmissions during the early stages of the war on terrorism. (Media Network)

**

NET INFO: BAJA NET MOVES

WB0YCQ reports that the Baja Maritime Mobile Net which meets 7 days a week at 8:00 am Pacific Daylight savings time has moved to 7.262 MHz plus or minus a few kilohertz. This is due to interference on the original net frequency. (WB0YCQ)

**

CONVENTIONS & HAMFESTS: SEVHFS IN LATE APRIL

The Sixth Annual Southeastern VHF Society Conference is slated for April 26th and 27th in Oak Ridge Tennessee. Program highlights include, antenna gain measurements, pre-amp gain and noise figure measurements, a Friday evening flea market with vendor displays, a Friday evening tour of nearby Ten Tec, and Saturday evening banquet with guest speaker Joe Dooley, P.E. of Oak Ridge National Laboratory. For more information contact Greg Robinson KB4NVD by e-mail to Rover@wireco.net (SEVHFS via VHF Reflector)

**

CONVENTIONS AND HAMFESTS: MT. BEACON HAMFEST POSTPONED

The Mt. Beacon New York Hamfest, scheduled for Sunday April 21st has been postponed. Planners say they are looking to reschedule. Stay tuned to Amateur Radio Newsline for an announcement of the new date. (KL7JCQ, WA2BSS)

**

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

THE SUPPORT FUND REPORT WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with some words regarding Amateur Radio Newsline's current fiscal situation, here is Support Fund Administrator Andy Jarema, N6TCQ:

--

That's right. Its me. A.J.. And when you hear my voice you know I am here for one of two reasons. One is the bad – as in – help we need your financial support. The other is to say thanks to those of you who have kicked in to keep amateur Radio Newsline coming your way.

This week it's the bad. The numbers for the first three months of 2002 are in and its not good news. Right now we have about $145 in the bank and close to a thousand dollars in back bills sitting on my desk. And the people we owe money to like the phone company and our Internet providers want to be paid.

The bottom line is that this is once again a financial emergency. Only you can keep these weekly newscasts coming your way. We need your help, and we need it right now.

And remember. Amateur Radio Newsline Newsline is a federal 501c 3 corporation and a California certified non-profit corporation. This means that all contributions are tax-deductible.

The address for the Newsline Support fund is PO Box 660937, Arcadia, CA 91066.

For the Amateur Radio Newsline Support Fund, I'm Andy Jarema, N6TCQ.

--

Again that's the Amateur Radio Newsline Support Fund, P.O. Box 660937, Arcadia California 91066. (ARNewsline™ Support Fund)

**

HAM RADIO IN SPACE: JERRY ROSS SETS SPACEWALK RECORD

United States Astronaut Jerry Ross, N-5-S-C-W has set a personal best . On Tuesday April 16th Ross made his 9th spacewalk on the latest of his seven orbital flights. In doing this, the 54 year old retired Air Force Colonel set the record for the greatest number of flights and spacewalks ever by an Astronaut or Cosmonaut.

Prior to his current flight, N5SCW had logged 1133 hours in space.
Ross is flying for the seventh time and may not get an eighth turn. This is because of other astronauts in line for flights. (Published reports)

**

INTERNATIONAL-RUSSIA: SPACE TOURIST READY TO FLY

The world's second would-be space tourist is almost ready for takeoff. Jeramy Boot, G4NJH, has the details:

--

Russian space officials say that Internet industrialist Mark Shuttleworth has completed most of his training and is ready to visit the International Space Station.

Shuttleworth is a 28-year-old South African economist who made his fortune with an Internet business. He said he would conduct gene engineering studies while on the space station using animal stem cells. He said he hoped his research could be used to help find cures for Alzheimer's and Parkinson's disease.

Liftoff of has been set for April 25th from the Baikonur Cosmodrome in Kazakhstan. Shuttleworth confirmed that he is paying $20 million for the trip but in installments that will be complete only when the mission is over. That's the same sum American Dennis Tito, KG6FZX, paid Russian space agencies last year to fly to the international station, becoming the world's first space tourist.

For the Amateur Radio Newsline, I’m Jeramy Boot, G4NJH

--

Its not yet known if Shuttleworth will be licensed to operate the ham radio gear on board the I-S-S. (Space Adventures, published reports)

**

INTERNATIONAL - NEW ZEALAND: POWER COMMS STANDARDS TO BE SET

Powerline telecommunications and its potential as a source of interference will be a major topic to be discussed in New Zealand. This, from September 16th to the 30th. The gathering is slated for the city of Christchurch where a newly established committees, is working to create common standards for information technology equipment and radio and television products. According to NZART, this should prove beneficial to that nations radio amateurs. (NZART)

**

INTERNATIONAL – ZIMBABWE: BBC SUSPENDED FROM CAB

The Zimbabwe Broadcasting Corporation has been suspended from   the Commonwealth Broadcasting Association for a year. This, as the print Media in Zimbabwe is becoming increasingly outspoken about   the Zimbabwe Broadcasting Corporation and its political role in that nation. More information is on the web at http://www.rnw.nl/realradio/html/zimbabwe-latest.html. (Media Network)

**

DX

In D-X, The VK9ML DXpedition to Mellish Reef should be on the air as this newscast goes to air. The multi-national team will be on the air through the 22nd of April. (GB2RS)

Also, GB2RS reports that another major multi-operator DXpedition will be active as XW1HS from Laos. The operators, all resident in Thailand, include American, British, Swedish and Spanish operators, as well as 11 Thai nationals. (GB2RS)

**

THAT FINAL ITEM - HAM RADIO IN THE MOVIES: IMAX ISS MOVIE PREMIERES

And finally this week, ham radio is not only at a film premiere. It is actually an important part of the movie. This as the new 3-D motion picture about the International Space Station gets to the giant screen in a press preview on April 16th. Amateur Radio Newslines Bill Pasternak, WA6ITF, has more:

--

The movie we are talking about is the new IMAX film called Space Station. Amateur Radio on the International Space Station is a part of it. According to ARISS Program Manager Frank Bauer, KA3HDO, the film simply breathtaking:

--

KA3HDO: “It was the closest way that an individual could experience space without going to it themselves. It was spectacular from the persoective that you really felt like you were there. hat you were part of the team that was making Space Station happen.

It just was phenominal. Breathtaking views of the Earth, of Space Station and inside the cabin of the space station.”

--

Bauer says that it was pretty awesome to see Astronaut Bill Shepherd talk to the Texas students with using ham radio equipment. Also, ARISS appears in the movie’s credits.

According to Bauer, there were 21 members of the ARISS volunteer team attending and supporting the sneak preview. Visitors included Astronauts Bill Shepherd and Yuri Usachev. Also attending were the film’s producer Toni Meyers and National Air and Space Museum Curator Jack Dailey. The comments were all glowing and Bauer says that this is a must see movie.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Consult local listings to find out when Space Station will be shown at an IMAX or OMNIMAX theater near you. (KA3HDO, ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year award is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules, an application and information on contacting us is on our only official website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Mert Garlick, N6AWE, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Can someone offer help on how to use the 706 scan edge feature? I can program the scan edge frequencies into the memories (1A & 1B, 2A & 2B, 3A & 3B) OK but can't seem to get the radio to scan between a particular pair.

Thanx,
Bob

Select the group (A, B, or C) you want to scan. Switch to VFO mode. In S2 hit SCN. To select the scan step, hold TS 2 seconds and set prior to scanning.

Maybe this is the part I'm "missing"... For instance, how do I select
the 2A & 2B pair?

Thanx for the help.
Bob

I have 2 / 38 Special cw qrp transceivers for sale. One is complete in a case
with all controls but has a problem. Im sure its an easy fix ie I think there
is a bad cheap IC gone. It has the 5 watt mod too. The second unit is new ,
built nice on the circuit board. It would need a small case and a few pots and
jacks. Have manual. Sell both for $55 shipped. Too many projects here -hi! 73s

M-CH knob.   Same knob you used to set the high and low freq. of the range.

The "a" and "b" pairs just set the edge freq's. The vfo sets the band you want to scan. Say you have "2a" as 410 mhz and "2b" as 470 mhz. Go to either VFO and set a freq in the middle of the "pair" you want to scan. IE: set the VFO as 450 mhz. Then while you are in the VFO , go to the scan menu and just hit scan. It will then scan between the edges. You could have the other VFO set to scan the other "pair" of edge freq's. MK

Yes you're absolutely right. My area of Pennsylvania is MUCH flatter than anywhere in the Cascades. But then he may not have a clear shot at a 2 meter repeater either. I'm not sure which band would be more helpful when the path to the machine is obstructed. Regardless, the odds of finding an available repeater and/or a ham on simplex should be higher on 2 than on 6.

Matt n3soz

hey norm
check your local radio shack they surprisinly carry a wide range of ham stuff
just check out there website there is over 150 items
if nothing else there is always mail order from AES HRO or texastowers
texas towers is a good company to deal with they have good prices and good
customer service

I checked it on mine, and you don't have to be in the middle of the two A-B freq's in the VFO, but doing that will make sure it scans the set that you want. I found it will jump to the nearest of the 3 A-B sets and scan no matter what band the vfo is on. So setting the vfo to the band you want to scan will ensure that it scans that band and not jump to another set. MK

I would assume by their name that Memphis Amateur Electronics is in Memphis - quite a distance from Nashville...

To the original poster, no, there are no ham radio stores in Nashville. There's a truck stop up on the interstate going north out of Nashville, right at the border of TN/KY that sells illegal CB amps though.. :)

Thanx Mark...

Your procedure appears to work with my scan edges but doesn't seem
very logical or easy. Must be a better way? (BTW, please correct me if
I'm wrong but I don't *think* this was detailed in the User Manual?)

Also, what if I want my 3A/B pair as a narrow subset of 2A/B? For
instance, I sometimes might like to scan all of 430 to 450 Mhz (setup
in 2A/B pair) but also have occasion to only need quick scanning
within 440 to 445 (3A/B pair).

Thanx again,
Bob

Your nearest probably is Gigaparts in Huntsville, Alabama. They are also on the internet and if shipped out of state then there is no Alabama Tax on your purchase. Bob N4BK ex - RT Systems Technician!

Ah, but you forget - MFJ is located in TN and I think it's closer than
Huntsville.. but I have a feeling that the original poster only wanted to know
if there were any ham stores in Nashville. I spent 9 months in Clarskville,
north of Nashville and I am pretty certian I would have heard about a ham store
in Nashville if there were one...

Simon
been out of the country for a couple of weeks but missed the threads so hopefully this isn't a mere repeat of other folks.

I use G5RVs quite often at temporary stations - they are not my favourite antenna but do allow simple operator as most inbuilt rig ATUs can tune them. I usually find the coax feed length critical if they are to be tuned OK on all bands (normally we have a problem with 15m, sometimes 10m).

For real contesting you will need a directional antenna and, of course, for worldwide contesting, it needs to be steerable. Don't know about you but I have neither money, nor space, nor neighbours for a 3 ele beam on 20m let alone 80m.

IMHO the best simple antenna is a doublet, ie a dipole fed with ribbon line to a balanced ATU. The John Hey book Practical Wire Antennas has details of lengths to avoid. I run 102' doublet fed by commercial 450 ohm ladder line. Ideally this should go to a balanced ATU but because I need to feed it via coax to my XYL's shack as well as mine I terminate the ladder line outside with a commercial (Radio Works) 4:1 balun and use a very short coax run to my Elecraft K2 inbuilt ATU. This seems to work pretty well. My previous antenna was a windom, again with a 4:1 balun, this time at the feedpoint, with coax to the rig. I think the doublet is marginally better (I have it about 8' higher at 35' which also helps) and between them I have 150+ DXCC countries on 10W SSB.

As a comparison I also have a Cushcraft R7 vertical. This tunes up on all bands 40-10m without the need for an ATU and gets reasonable reviews for a vertical - it has the plus point that it doesn't require ground radials. I typically got 1-2 S-points more on the Windom and now 2 S-points more on the doublet. Occassionally the R7 performs as well or possibly mariginally better than the doublet (particularly on 40m) depending on direction and skip.

Hope this is of use.

Brian G0UKB

To pass the test all you need to do is to memorise the correct answer to the question. All the other stuff is just confusion. To really learn about ham radio requires much more than the small ammount of info given in the Q&A book. Some people just want to get in to ham radio to just talk and are not interisted at all in the techinecal aspects of how the stuff works. No need n adding to their confusion.

I have been a ham for about 30 years. Stayed at the Technician level for about 25 of those years. I did not care to get on and just talk but wanted to play with the equipment. Never did see any big deal for what I wanted to do on the low bands. Finally decided to upgrade and for the Advanced class I never saw the Q&A book.   Passsed that on first try and when I finally got up to 20 wpm (old rules) I did read over the the Q&A one time .

I've felt your pain at a couple of field days. The G5RV didn't do much for me either...

You are trying to paint a 16 color picture with 1 color. What would be good will depend on the band you prefer. I get the hunch you want all of them, but getting "contest buster" performance on all bands with a single antenna is gonna be tuff. I'm not a great fan of the GAP designs. They use intentional resistance to get a better match. Also they claim that elevating the feedpoint cuts the need for radials. Don't believe it. Myself, using intentional resistance is something I can't quite stomach. You have enough problems with unintentional losses to need any extra. Mostly ground losses with a vertical.

Being you don't want radials , I would totally rule out a vertical unless you use an elevated "1/2" type vertical like the cushcraft R7 or whatever. For 20-10 meters that will give you the best performance with no radials. The higher, the better. What you probably should do is improve the wire antenna you have.

Maybe concentrate on fewer bands , so you can use better antennas. A regular coax fed dipole using no tuner will seem like a miracle worker compared to the average G5RV with the tuner losses it has , and the stuff they stick in the feedline. You can use some on more than one band. A 40 meter coax fed dipole will work 15m pretty well. The SWR might be a tad high, but you could lower that with a tuner.

At least you know that most of the power that leaves your radio or tuner will make it to the antenna and radiate. The losses in coax with a low SWR are very low on the HF bands. You have many options for good antennas with some gain, but they tend to be single band unless you use ladder line. Say you like 20m... Try an extended double zepp. Thats good for nearly 3 db broadside. Like 10m? Most 1/2 and 5/8 wave CB antennas work well on 10m. They will outdo most multiband amateur verticals by a sizable amount. A small yagi even better.

If you like 80 or 40 meters, I would stick with coax fed dipoles. Don't use a tuner. You can run both sets on the same feedline if you want." Parallel" Will work much better than the average G5RV. 80m, no contest. Of course, for the low bands, a vertical is usually best for long haul dx, but you need a REAL� vertical with lots of radials under it. I mean like 30-60 for a ground mount. If you can't deal with that, I'd stay with coax fed dipoles. Thats the best you are going to do on a fairly small scale. If you must have an all band antenna, I'd use a 130 ft dipole fed with 450 ladder line the whole way to a good tuner. Or use Cecils no tuner method. Always use the least amount of inductance to tune. Using too much will cost you 20% of your power in many cases. This is why I prefer coax fed and no tuner. Even using the least inductance, I can still tell a difference. You waste very little

power with coax. I ran a coax fed dipole at 40 ft for 20m SSTV and I don't think there was a single time anyone couldn't hear me. I worked many dx stations with 40w of video. They didn't receive snow flurry pix either... :) If I'm S7 with the dipole, I'd only be about 1-1.5 S units stronger if I was running a full size 3 el yagi at the same height. Only with very weak signal levels would it be enough to make a real difference.
You'll never be as loud as the big strappers with big tall yagi's and 1500w amps, so get used to waiting in line. You can make it once they get through. MK

Dear Simon,

Your G5RV will be improved by replacing the coax with more widowed twin line and using a balanced ATU. You may have a rig with a built in ATU but these don't have the amount of adjustment needed to tune up all bands. They are really only useful for matching to a linear or correcting a slightly off resonance antenna. Have a look at http://www.cebik.com/ for the best on-line antenna info.

Other replies have pointed out some of the advantages and disadvantages of verticals. If you live close to neighbours you may find that a vertical causes many more EMC problems than a horizontally polarised antenna and, as others have stated, will pick up a lot more local noise.

The G5RV may well radiate from the feed line as it is normally driven unbalanced. A doublet will be more effective if it is driven balanced and it will then only radiate from the antenna and not from the feed line.

Walt Davidson sez -
> And for that, you are talking about a minimum of 100 buried radials.
=========================
Walt, nonsense !

With a 1/4-wave vertical, 99 times out of a hundred 8 or 16 or 32 at most
are quite good enough. You've been plagiarising the old wives utterances yet
again.  ;o)

I think KB7QHC is right - you are unlikely to be much happier with a vertical than you are with the G5RV. (and I'm sure the G5RV was much less expensive!)

One antenna I've had surprisingly good luck with is a Windom. It's a dipole, but off-center fed. 26.8m on one side, 13.4m on the other. Use a 4:1 balun, either at the feedpoint or connected to the feedpoint through some length of 300-ohm flat TV antenna feedline. I'm told (but haven't tried) that you can halve those dimensions if necessary - losing 80 meters but not affecting the other bands.

That's what I use on my second radio for two-radio contesting. It's no competition for the tribander, but it's pretty effective. Whether it would

beat a G5RV I don't know.

It's my understanding that the number of radials is also dependent on the height of the verttical above ground. That is, the feedpoint. Furthermore, the greater the height, the lower the take-off angle; a key consideration for any DX work.

With dipoles it's *horizontal* length that's needed. I can't tell how you many times I've sighed when I read someone saying, " First you string 135 ft. of wire." So easy to type, so impossible for many of us to do.

I use trees for height and support, but they also lock you onto anchor points that may leave your broadside working OX and you working the world off your dipole tips. Dog-legging effectively destroys dipole gain. Using comm'l towers implies serious money for any real height. Using Beam-type antennas like Quads and Yagis locks you into fewer bands unless you have both money *and* real estate. Using homebrew masts can often mean loss of real height and still may not be practical due to trees or other obstructions. And let's not forget we loose a chunk of the yard as we dare not cross the dreaded power line !

In other words, this is the fun-stuff !

I could do with one for my FT411

I think the PMR version of the FT23 uses them ?
many surplus now

I have to agree. I not only haven't got the room to put up a dipole (unless 16' counts!), nor a G5RV, or any tree to hide anything in. I am prohibited from putting up any kind of outdoor antenna whatsoever. So anything I can manage to stick up has to be disguised. You've heard of the antenna that looks like a flagpole, well I have an antenna that looks like a hedge! I have no wire fencing to support anything. I can run a longwire against my brick wall, but we know how well that will do. I would love to try the Isotrons but they are so expensive. I just keep trying different types of hidden antennas until I find one that works. They ALL receive well but don't radiate worth a darn. This is what I love about the hobby.

Anybody got a spare 20m Isotron laying around they want to see put to use?

Apartments above me and on both sides!  I could possibly put an Isotron in
one of the upstairs bedrooms.  That would get me about 30' off the ground.

Malcolm G4CXT wrote:

> If the G5RV is reasonably symmetrical in the air without too many obstructions around it, and it is tuned with a properly balanced tuner then it will NOT radiate from the feeder on any bands.

I understood that on some lower bands the feeder was designed to radiate; I would be grateful for a bit more detail on this. Should the feeder radiate, then as I said , there will be noise pickup on this on receive, which will degrade the signal-to-noise ratio.

> If the G5RV is reasonably symmetrical in the air without too many obstructions around it, and it is tuned with a properly balanced tuner then it will NOT radiate from the feeder on any bands.

> If any of these conditions are not true, however, then there may well be some imbalance in the feeder and radiation will result - but not by design.

Well, there's many ifs and buts there! And modern gardens generally don't have so much clear space. But we don't know the original poster's situation as far as that is concerned.

> ANY multiband antenna of any construction, shape or design is a compromise over a single-band, single purpose antenna!

Of course it is.

> Now, to the original question - I have an 80m dipole with tuned open-wire feeder at 35ft and a GAP Titan mounted in a reasonably clear spot on flat sandy soil. On all bands from 40m to 10m the GAP is at least as good as the dipole, and on some bands for certain QSOs is better. DX performance on 40m & 30m is generally better on the vertical, but mainly because of reduced european signal levels.

I'm sorry to say that the statement that "On all bands from 40m to 10m the GAP is at least as good as the dipole, and on some bands for certain QSOs is better" is the sort of sweeping generality that ignores the fundamentals and as a consequence gets some antennas a bad name where it isn't deserved, and some a good name that isn't deserved either.
You are simply comparing apples and oranges here. Your 'dipole' (by which I think you mean a doublet resonant on 80m) has a variation in radiation pattern as a function of band that simply doesn't exist in the same form with a vertical. On some bands you could be operating with a major lobe (with gain!) to a target area, and on a different band the same target area

could be in a null (with negative gain!). This alone could give rise to the basis for your statement, but it isn't as a comparison of a vertical and doublet on otherwise equal terms - it is as a function of the changing radiation pattern of the doublet!

This is why I said to the original poster to mug up on antenna radiation patterns, decide what he can put up in his own particular location, and operate accordingly using the advantages of the chosen antenna to the maximum, and being mindful of it's disadvantages

> As somebody said before 80m performance is poor
> on the GAP. Its not a mirical antenna, but its at least as good
> as any other multi-bander and has a good bandwidth on all bands
> except 80m. It also costs a lot of money ... a lot more than I
> had when I was 16!

Biut WHY is 80m performance 'poor' for the GAP? Over what ranges? Day or night? Seasons? These are all important factors. What other fundamentals are being ignored here - if any! I'm not familiar with this antenna, so can't really comment apart from raising the obvious questions.

> But it just could be Neither of these antennas will be
> competitive in large contests on any bands .... you need a 3kW
> amplifier and all controls turned to maximum (especially the
> speech processor) to join in! (It also helps if you listen on
> the frequency before transmitting, but that appears to be
> optional!)

LOL! I've got to agree with you there. But I also tried to say to the original poster that with a system designed by him, where its good and bad points are known and explored, he could have a reasonable shot at contesting; but he'll have to bear in mind the points you've just raised. It boils down to station design and operating skill, something one has to learn....usually the hard way, but not necessarily expensively so. And picking the right contests - about which I can't offer any advice.

Thanks for responding, I quite enjoyed this. I hope we haven't left the original poster behind or forgotten his needs. As I said, you can't teach it - or learn it - all in one posting. Antennas can and have formed the basis of lifelong experimentation for some amateurs. It's a topic I personally find fascinating.

Hi Doc,

I have operated with a Gap for years and have noted absolutely no loss
whatever. Could you elaborate?

Hi Mark,

Having assembled and used a Gap, I must've missed that resistor.
Where does it go?

Simon,

Well, by now you've probably noticed several things:

1. That you got a lot of educated responses to your query.

2. That most of them were confidently presented as the " last word."

3. That many of them seem at odds with each other, so now what?

Welcome to Ham Radio ! I absolutely promise that any antenna thread, if it should continue long enough will get increasingly opinionated and end up in a flame war eventually. The outcome is rarely for the sqeamish.

So what's my two cents worth? Well, I would emphasize what maybe others have implied without always saying: You and your unique QTH are the deciding factors. All the design in the world won't squeeze a 200ft. tower in a townhouse backyard, etc., etc.

I would urge you to do a lot more careful measuring. You need to view your lot as a series anchor points and elevations bounded by property lines. You must think in a 3-D fashion. You might even find it real fun- like a puzzle ! Even one tree and one roof offer myriad possiblities. An IMPORTANT consideration to remember is that while that broad-band dipole might have a pretty figure-8 on one band it might have annoying minor lobes on the frequency you'll use the most. Furthermore, while the major lobes at one freq. may be pointed at your DX target, on another freq. that target may be lost to you because those minor lobes have killed your ability to reach that DX. What works well to Europe on one band could end up pointed at Greenland on another using the same antenna. No kidding.

Your best tools outside will be a tape measure and a compass. You need both. Don't guess your headings because remember your major lobes will alter as you move from band to band. Your best tools inside are caculator, PC, internet and however many books you've time and energy for. The time spent actually building and hoisting your antenna should be no more than 15-20% of your total time on the project -- even if you buy a commercial one. The Cobweb doesn't impress me personally because it looks like the reason it radiates equally well in all directions is because ot has gain in none of them. Dipoles are the cheapest and easiest gain-for-money there is; Why throw it away ??

BUT BE WARNED:

Because if you do your homework properly you're going to discover one of the TERRIBLE TRUTHS of Ham Radio; That, as we gain experieince and knowledge, ultimately the sum of our talents and abilities will exceed what our time, our money, our families, our real estate, and our community allow. And nothing will get you through that wall.

(You said you're 16; If you're sharing this with your Pop he might tell you there's a lot of other things in life that work just like that. Just ask him.)

73 es Gud DX de KG4JBM / Andrew

I'd be surprised if you're happy with the performance of an Isotron, tho it will be better than nothing. Better to make up a short dipole.

A couple years ago there was an article in Worldradio magazine describing a dipole with sprialwound end loading coils that was only 12 feet long on 40 meters, and could be about half that on 20. If I recall the total length of the antenna elements plus the spirals equals a halfwave. I don't have a reference at hand, maybe someone does. It used aluminum Radio Shack ground wire for the spirals. You might be able to make up one of those and hang it out an upstairs window when you want to operate, or just temporarily mount it as high as you can
on the ground and take it down after use. Something you can come up with will work well enough to get you on the air. Keep trying.

Dick

Hi All,

The original comment belies the obvious comparison to the horizontal
on the same basis:
     Horizontals radiate uselessly up and down.

Rubbish. The more the better. One radial per degree (=360) isn't too
many. And it isn't a factor of two either.

That just isn't so. The more radials the better. They look a obtrusive
attached to a mast-mounted vertical.

>Furthermore, the greater the height,

>work.

Right on!

==============================
Dear RVMJ,

Wrong ! When a 1/4-wave vertical is 1/2-wave or more above ground there is nothing to be gained by having more than a single 1/4-wave radial. I know it's difficult for a non-mathematician to take in, but you can't have anything more than 100% efficient.

> to-noise ratio.

The original design of the G5RV is a 3 half-waves doublet for 20m - on which band it can be outstanding in the favoured directions - it is not a compromise antenna here by any means! On the other bands (exc WARC) the feeder length & impedance has been carefully choosen to present a 'reasonable' match to a valve amplifier - certainly one that can be tuned out.

Modern transceivers will always demand a better match, therefore a tuner should always be used - and preferably a balanced one. (Note, most if not all commercial ATUs are not balanced. Some have a balun at the antenna input which is a pretty dodgy trick on high impedance or highly reactive loads).

Under these conditions there is no *intended* feeder radiation.

Many articles on the G5RV show it being used with the feeders strapped

together and tuned against ground on 160m. This of course is ALL feeder
radiation, and none off the top, but its not a G5RV anymore, its a
top-loaded Marconi vertical!

Absolutely - coupled with the fact that "commercial" G5RV antennas (I really
don't know why people pay all that money, but there you go!) have a coax
transformation at the end of the ribbon feeder and if tuned at all will be
by an unbalanced tuner - so in reality a good proportion of G5RV antennas
will exhibit feeder radiation, and hence behave differently from that
predicted.

I agree completely - as a professional radio engineer! Its simply an
operational observation, and as you point out is pretty worthless, other
than to verify that both antennas are obviously working!

By way of defence I once had a small vertical antenna with a trap in it -
and this performed consistently worse than a horizontal dipole, so
subjectively I concluded that the trap was contributing a discernable loss.

By making such a sweeping statement you might at least deduce that you
wouldn't be completely wasting your money!

> You are simply comparing apples and oranges here. Your

> function of the changing radiation pattern of the doublet!

Quite right - and also the vertical antenna to boot - which is affected by its surroundings up to about 20 wavelengths away, which in my case includes houses & trees!
>

Excellent advice - and that is why I have a great circle map on the back of the door with all local obstructions & antenna orientations for my garden marked up on it!

> apart from raising the obvious questions.

All good questions - but fundamentally this antenna is too short to be an effective radiator at this frequency - though it does resonate as designed, and is quite effective as a receive antenna as the Eu/DX noise ratios are different (another sweeping generalisation, of course!)
>

> advice.

I agree - I am moderately successful at some HF CW contests - by picking ones which match my limited availability & equipment. eg a short European contest with a 100W section where predominant QSOs are on 80 & 40 - operated with a lowish dipole can give a good placing.

The best contests are those where high power & big antennas do not dominate all the tables .... try ROPOCO this sunday morning on 80m for example.

> and have formed the basis of lifelong experimentation for
> some amateurs. It's a topic I personally find fascinating.

Yes - I've been playing with antennas since 1973 and still have a lot to learn. Apart from VHF yagis the only antenna I ever paid real money for was the GAP vertical - and that was because I was living in a block of flats at the time in another country and needed something which was fed with a single coax from 5 floors below, worked on all bands and was simple to erect. Most of the time its suck it and see, and its very difficult indeed to be objective about performance. However, one field day some years ago I designed (as in with sums and theory!) a 4 element vertical antenna for 40m, fixed on the USA. Everything checked out on site with a field strength meter, but it wasn't until about 2 am when we had the first call from the US that I really know it was working ... we switched from the standard 40m antenna (a delta loop) to the beam. The European noise all but disappeared, and the US signal hit the end stop! Now, that was job satisfaction. We didn't win NFD that year though, only came second!
(G3RAC/P in case you are wondering).

Thanks for the oportunity for the debate - but why the secrecy?

In 97.113(a)(4) it is clearly prohibited. ARRL cannot change that. The only solution is a petition to the FCC for a rule change.

With all kind wishes,

de Hans, K0HB

Thats silly. The only type of ground that really matters is whats under the antenna, and the ground quality in your local area as it apples to the far field.

What really matters assuming both types are properly installed, is what band, distance, time of day, etc. I'm on land and I use both at times. Which I would use will depend on the distance and path. On 40m I ran a dipole at 36 ft, and also a full size 1/4 wave ground plane at 36 ft. if I were working regional distances out to about 800 miles, the dipole will almost always be better.

Past 1000 miles the vertical would almost always be better. At 1500 miles at night, the ground plane would be 2 s units stronger than my dipole. From Texas to VK land, 4 s units. But if I woke up the next day and decided to work Dallas from Houston, I better get on the dipole if I want the best signal. As you can see the ground doesn't mean anything as long as you take it into account when designing the antenna. If you are on lossy earth, that just means you have to use more radials to reduce the ground losses to an acceptable level. As another comparison on 40m, lets compare my 9 ft mobile antenna on my car to my 36 ft dipole at the house. Everyone knows the dipole is much more efficient. Thats a given. But that still doesn't stop my mobile antenna from outdoing my dipole at 800 miles or more at night. Why? The radiation from the mobile antenna just happens to be strong at the angles I want when talking that distance. Being the dipole at 36 ft shoots mostly straight up or at fairly high angles, it loses in that case. This blows the whole ground vs water, etc theory out of the water. My mobile was sitting in front of my house in the driveway, not at the beach. It would perform better at the beach, but it's certainly not required.

>

> Sigma-V vertical.

The GAP might seem to work ok if you have nothing better, but believe me, as antennas go, it's pretty lame. I wouldn't stick one up if someone gave me one free. I'd sell it and build or buy a real antenna that has no hidden resistances.

>
> I have also been pointed at the 'CobWebb' antenna - which is claimed to
> have 5 - 7dBi gain on all bands.

Whoever claimed this is on some kind of drugs. Or they use the effects of ground to "bolster" the antennas performance without mentioning they are including ground effects. I hate it when people do that. Really irks me... A cobwebb is a folded back dipole. It has LESS gain then a normal straight dipole.

The ham which pointed me in the

> suggestions?

Not really. I've already about covered it in my other post. If you
stick with wire antennas, coax fed dipoles or a tunerless ladder line
system are the best. Ladder line all the way to a good tuner is the
next best. It all goes downhill from there. MK

At that point, a vertically mounted dipole does the job.

 Don't bet on it.   :-)

In Consumer Electronics "return" normally refers to earth ground and "reference" refers to chassis ground. Depending on the equipment and it's particular design there may be a large variance in potential between the Return (Earth Ground) usually denoted by the downward pointed arrow on a schematic, and the Reference (Chassis Ground) usually denoted by a flat line with numerous slanted lines descending from it. Knowing the difference and acknowledging them can be life saving. Cheers & 73

It is probable he is receiving a lot of reflected image signals from the
surrounding buildings. I agree, a good log parabolic yagi pointed at the
strongest signal source may suffice. The strongest signal may or may not be
directly attained by pointing the antennae specifically at the station
tower. Occasionally, in large metro cities, the reflected signals can attain
fairly significant levels. 73

Agreed: referring to the radiated RFI. Lots of complaints are a result of poor quality connections at the offending receivers, or even in the cable drops to the residences.
Grounding: We normally ran a good 8' copper ground rod into the earth and ran #10 Gauge Stranded copper wire off it to the area where we installed the transmitters. Constructing a open buss using the stranded copper wire and soldering the ground feeds from the transmitters and amps directly to this home rigged buss. Also connecting the ground shields of the transmission cables. It did not look like the custom milled and housed ones that you can buy now but it worked..

<gee4ceeexxtee@beeteeinternetdot.com> wrote:

|Many articles on the G5RV show it being used with the feeders strapped
|together and tuned against ground on 160m. This of course is ALL feeder
|radiation, and none off the top, but its not a G5RV anymore, its a
|top-loaded Marconi vertical!

Actually, one of those articles is the original Varney paper.

(http://users.triconet.org/wesandlinda/g5rv.pdf)

So, by the popular criteria that the antenna described by Varney is a "G5RV",
this configuration *is* a "G5RV" too, although Varney described it as you do.

Actually, Varney's claim to fame is the *magic* 102 foot length. As I have
already claimed in a much earlier post, dipoles 102' in length are "G5RV"s,
balanced(?) line, end-fed wires are "Zepps", off-center-fed dipoles are
"Windoms", dipoles with the ends lower than the center are "Inverted-Vee"s and
all other dipoles are "N7WS"s.

Cheerio

it was my understanding it was composed of a lot of thin coax wound
into the lower section of the antenna.
But I may be wrong on that. But it's still an inferior antenna no
matter how they made it. It's been carefully compared to other brands
of verticals and lost out. Assuming each type had the same number of
radials under them, which I'm sure they did, if the GAP loses against
other same size verticals, it must have some excess loss somewhere.
I've never heard of one doing that well on 80m. The butternut did
quite a bit better. I'm pretty sure it was W8JI who did this
comparison. I think others have too. There may be something in deja
google...A friend of mine had one and it was near useless mounted in a
manner that they suggest. Someone gave it to him free for that reason.
The first owner couldn't get decent results out of it either.I think
the friend of mine ended up pawning it off on someone else...:/
Myself, I'm not crazy about any of the multiband verticals compared to
a full size monoband vertical. The butternut HF2V is pretty good for
80/40, but I made my own version for peanuts compared to what they
charge. MK

Check out this great, actual comparison by Mr. Banz. Helped me decide that
with no space for height and no radials, the GAP Titan DX was the way to go.
I still love it.

There are lots of holes in that test though. For one thing, many of the "reference" antennas are kind of on the strange side. Lets start with the 40 meter test which means the most of the bands involved. He uses a 3/8 wave whip elevated at 5 ft off the ground, with two 20 ft radials. Now, being these radials are not resonant, and they are elevated, they are next to useless as far as cutting ground losses. So he's comparing a homemade fairly lame antenna against a storebought fairly lame antenna. Now, I'm missing his result table for 40m, but he states a -7.6 db decrease in average reports against the 3/8 wave antenna. Now being the 3/8 wave at 5 ft with two fairly useless 20 ft radials is not a barnburner by any means, it's kind of disturbing that the gap LOST by 7.6 db. Also I have to wonder how he measured the differences in DB. Step attenuator?, S meter? , etc. He doesn't say. I have to presume an attenuator being he can specify the loss in DB. So anyway, for the poor person running the GAP, he would need about 600w of power amp to equal the ERP of the person running the fairly lame 3/8 wave. From what I can tell, the only band that the GAP didn't get beat up on was 20m. And it was a tie. All the rest of the bands it seems to have lost. Against low insufficiently radialed 3/8 wave verticals. Now, I have no problem with anyone using a GAP if thats what they want to use, but I'm curious to why you decided this antenna was for you, when it got beat up on like a lost step child in this "great actual comparison"? Inquiring minds wanna know... -11 db on 10m??? -7.8 on 15m, etc, etc ??? Good grief...I think they used the wrong name. They forgot and left the "C" off the front end...I noticed he didn't include 80m. Does the titan have 80m? Thats the band where the testing will mean the most. I guess the thought of posting the -?????? numbers for 80m was too scary to deal with...
Oh well, another day, another two dollars thirty two cents. MK

Were it me, I might try four folded dipoles made of half inch copper pipe. Using the standard 90 ohm phasing/matching harness and mounting the antennas as two pair on each side of the tower to get a pretty symetrical pattern.

One thing to remember is that unless the antenna is on top, the pattern varies greatly with the spacing between the antenna and tower,.

If I had the fiberglass stick, I'd probably make/build a coaxial antenna and insert it into the fiberglass stick. Use fiberglass supports, or other good and strong insulating material as supports to keep the antenna from whipping around if side mounted. The big top mounted commercial ones are massive and must weigh close to 100#.

I've used the copper pipe, folded dipoles on 2-meters with good results.

If you elevate the feedpoint to at least 15 feet, four radials will perform just as well or better than a ground mounted vertical with 120 buried radials. This was the conclusion of K8CFU who took hundreds of field strength measurements from both configurations (Radcom, Technical Topics April 89).

Hi Simon,

Congratulations to your licence!

When I came back to ham radio three years ago, I was in a similar situation. I have now tried a couple of verticals and a couple of multiband wire antennas. I first used a (no radials) Cushcraft R5, which performed reasonably well 20-10 m (their R7 and later R8 are similar designs for 40-10) when mounted high and in the clear. Not that well when mounted on the ground.

But the R5 could never beat my 135 ft flat top fed with 450 ohm ladder line and ATU! I have found the latter to be a surprisingly good antenna here, even though ground conditions and surrounding salt water should be good for a vertical.

I then moved to a Butternut HF2V vertical , trapless design for 80/40, using six 33 ft radials and mounted on at 25 ft above the surrounding ground. This antenna works beautfully on 40, where it is almost full size (32 ft hight) and also, surprisingly well, on 17 m!. Performance on 80 m is satisfactory, although the bandwidth is limited. I wholeheartedly recommend this antenna to anyone interested in 40/80 m dx. I now use it as a multiband antenna 80-15m (it gets a bit long for low angle radiation on 12 and 10 m) with an ATU at its bottom and additional radials.

BUT, again, I have recently tried another wire antenna, this time a horizontal loop , first 42 meters long, then 81 meters , fed with 50 ohm coax and with a low SWR on most bands, in need of a tuner on a few of them. This is my current favourite, a surprisingly good antenna not only for Europe but for DX as well. And silent, compared to my verticals, which in a city environment get very noisy, particularly in the summer months.

So, in summing my experience up: verticals are ok, provided you have good ground where you live, mount them high and (preferably) use radials. Good radials take a lot of space! And verticals are expensive and sometimes noisy.

Both the 135 ft ladder line fed flat top and the horizontal loop (called "Loop the Skywire" in the ARRL Handbook/ Antenna Book) are excellent multiband antennas, also for DX, inexpensive, although you need to make a (smaller) investment in a tuner.

I have no experience of the G5RV but from what I hear and read,a flattop with ladder line normally performs better.

Good luck!

73�s / Per / SM0WRA

Well Simon, it would depend on which contests you are interested in. If you are interested in the 80m contests run by the RSGB which rely on local contacts, a vertical would always be a poor choice. In any case, there is no such thing as a free lunch and all ground-mounted verticals need radials to work effectively (contrary to what others have claimed here). You might consider replacing your G5RV with a doublet, this will tend to outperform the G5RV.

To do better in contests with a simple antenna system, I would suggest that you need to concentrate on just one band. Basically, you are most unlikely to do very well in any contest with such a simple antenna system unless the other contestants are using similar systems. That should not stop you having lots of fun however and you can certainly improve your operating skills.

For more advice on contesting, I would suggest that you join the UK contest reflector at QTH.Net.

Mark:

I'm glad you took the time to read the article. After I read it, I =
emailed Mike Banz with some questions since I am an investment =
consultant and by no means an antenna engineer. He makes no "bones" =
about the compromise. In fact, below is a large portion of the text of =
his return email.

"I believe that the Titan is a reasonable compromise for a multiband =
vertical antenna where NO ground radials are possible, and no-tune =
performance on multiple bands is required. From my tests you have =
observed that it's performance on 20 meters is equal to that of a =
monobander. On 15 and 40 meters it is slightly compromised. On 10 =
meters it is poor, and on 80 meters useless.

If you want to work 10 meters, you would want to supplement the Titan =
with a small home brew monobander. However, putting myself in your =
shoes, i.e. if I wanted to work 10, 15, and 20 meters, but nothing =
higher, I would probably erect three simple free standing monobanders =
with elevated counterpoises. These would out perform ANY commercial =
antenna, and could probably be constructed for under $75 total. The =
biggest issue might be that they would be much less visible than the =
Titan. I had my Titan next to monobanders for 40, 15, and 10 meters, =
and it stuck out like a sore thumb, whereas the simple monobanders are =
so thin as to be practically invisible."

Before I left the hobby back in the '80s I had a small beam, then after =
moving here with CC&Rs, I had to use what I could by "hiding" dipoles =
that didn't work, and finally by taking a chance with a ground mounted =
4-BTV. After returning to the hobby years later, and living in the same =
location, I knew that only a vertical with no radials was possible. =
That was a bunch of money, so after all the research I could find, I =
spent it on the GAP. I found no other reasonably thought out work about =
any other vertical antenna, and the consensus of the news groups was to =
move to where I could have an antenna farm. I was willing to do so, but =
nobody wanted to pitch in and help me afford the move.

For all the compromises, at least I am on the bands again, and can =
ragchew when I want, and in six months of working, have worked 182 =
countries on five bands with 100 watts. I guess the key here is that =
even with CC&Rs, very small space, and all the compromises, I am back on =
the air, and again enjoying the hobby.

Thanks again for the comments.

Hi Mark,

Well, for one, the difference between the oft repeated claim that Gap
>use intentional resistance to get a better match
and the equally, repeatedly expressed
>composed of a lot of thin coax
do not amount to the same thing.

For two, I have (as would many) far more coax going to the antenna than is found within it (which is not "thin" in any sense and not coax either, but then there is the eye of the beholder and such). I can imagine some may want to argue how lossy coax may be, but even at VHF less than 10 feet makes for a poor example and a poorer argument, and VHF is not even in the mix.

For three, you do justifiably point out that if compared to a simpler antenna that outperforms it, that this constitutes loss. Not Ohmic, unless some better data is provided in the place of repeated assertions that are untested. There is a far simpler explanation, a larger radiator, in relation to wavelength, tends to develop lobes of radiation that serve no useful purpose. Hence the complaint observed in another sidethread of poor 10M performance (which does not occur with my Gap).

For four, I have the Gap Eagle. It is not generally discussed here as most interested parties are trying to get onto 80M. I will allow that the low bands of any Gap design are inadequate to the task, but they still offer a match as promised AND if we were to strip away all the gee-gaws and match the traditional way, it would still be a poor performer on those same bands. Hence, if one is limited in choices, then the availability of a more suitable match is a boon (not something that worries me however).

For five, I have followed the modest requirement of elevating the Gap as specified. There is no issue of radials, aside from those elements serving their purpose to some degree and I have compared to many stock designs to find that sometimes they are better and sometimes the Gap is better. At times the only explanation I would offer would be the angle of launch or arrival - this is entirely speculative, but supported by ad-hoc observations and using propagation modelers to distinguish the operational differences.

For six. It has withstood some good windstorms unguyed. It always plays (if better on some bands than others). I have never had to service it, but I have inspected it on occasion and found nothing out of place (except for one cracked bead at the choke, wind damage of the cable slapping against the tube - as this was at the inspection level, a simple tape job resolved that easily).

Would I buy another? I didn't buy the first one, it was a gift of my buddy when he moved up to a tower and Log Periodic. However, to answer the question honestly; no, I wouldn't buy one. A simple pole driven through a tuner does the job too (better/poorer/indifferently).

Excellent stuff, thanks. Interestingly, several people have pointed out
that a doublet may work as well.

I think I'll have a go at making one - thanks for the info. By the way,
your callsign looks very familiar - perhaps we've worked in a contest
already!

Thanks for your response (and thanks to everyone else, keep 'em coming!)

Richard, I'm mainly interested in the large(r) contests - mainly CQWW and CQ WPX. I like these ones because they either have a 'rookie' category or a 'single element' category or similar!

From the replies I've been receiving, I've learned that verticals tend to work reasonably well on the lower bands, for DX contacts (although they're less reliable than a dipole for making inter-continental contacts).

I think I may have a go at making a doublet or perhaps even an inverted V, as long as I can get permission from parents. :)

Luckily, my dad is a ham (although now inactive, mainly because I've pinched most of his equipment!) - he's licenced as G4CVS, so I think getting permission shouldn't be too tricky.

By the way, the garden is about 40 - 45ft in length, so it's not too bad. But on the other hands, it's quite short too :)

73, thanks for the nice replies folks.

Thats the bottom line. If you are making qso's, it's better than
nothing.
Again, I have no problem with anyone using one of these. I guess my
gripe is their theory of no radial operation, etc. They shoot
themselves in their own feet by stating that over and over again. If
everyone ran radials with the gaps, they would probably have less
complaints. I guess my main point is, if you are "really" serious
about a high performance vertical, there are better routes to go.
Mostly homebrew. Of course, most high performance vertical systems
don't do multi-band very well. The butternuts are "probably" about the
best as far as a multiband antenna, but they make no bones about
radials being required for good operation. MK

The antenna you seem to be describing appears to be a dipole with an
included angle of ~90 degrees, which isn't the sane animal as a
vertical monopole working against ground or its equivalent.

Malcolm wrote:

<big snip of interesting posting about antennas>

>Thanks for the opportunity for the debate.....

Thanks also for an interesting discussion - it seems that the more one finds out about antennas, the more one realises how much more there is to know!

But you have to start somewhere, and I hope that the original poster, and any other newcomers, have been given some pointers to a fascinating subject, and also some pointers to antenna basics that might spare considerable dissatisfaction with an expensive commercial antenna.

I like your idea of plotting the positions of objects that could affect the radiation pattern on a great-circle map. For a horizontal antenna the same could be done bearing in mind the predicted major lobes, minor lobes, and (perhaps more importantly) where the nulls could be expected - and then trying to confirm this with actual (targetted) contacts.

Your contest advice, is, I suspect, hard-earned and a highly relevant!

> - but why the secrecy?

......but what secrecy?

>location, I knew that only a vertical with no radials was possible.

Time for a sanity check. Simon's original post was asking for better contest antennas not hiding antennas or dealing with CC&R's. The GAP antennas are a lousy choice - contesters joke about them.

Simon, there have been many opinions on this subject but not many from serious contesters who continually strive to improve their stations/signal. Here are a few ideas and resources for improving your contest antennas.

First, take the time to study what other contesters use for antennas. They have spent a lot of time and effort making their stations as competitive as possible. There is a World HF Contest Station Database that lists station descriptions at:

http://www.pvrc.org/WCSD/WCSDsearch.htm

several other big contest and DX stations are featured at:

www.qsl.net/dj7ik/bigguns.htm

Some of these stations have HUGE amounts of antenna hardware as well as a carefully selected location for best HF performance. I'm not trying to discourage you, but it is important to understand that contesting with a G5RV or vertical will get frustrating when competing against stations with stacked Yagis on tall towers running full power. On the bright side, most top ranking contest operators started off with small stations and simple antennas when they were younger. They made the most out of their smaller setups by learning and practicing good operating skills, learning about propagation, etc. This hard-earned experience really pays off later when joining multi-op teams or when they can afford their own house/station (with much bigger antennas).

If you look through the station descriptions, you will notice verticals (and related antennas) are preferred on 160m, somewhat on 80m and somewhat less on 40m. Antennas for 20m, 15m and 10m, are dominated by horizontal types (mostly Yagis) at least 1/2 wavelength high with 1 wavelength generally being better.

As someone has previously suggested, check out:

http://www.cebik.com/radio.html

W4RNL's site contains a great amount of information on several types of antennas you might consider.

Simple wire dipoles and loops are fair performers but contesters prefer antennas with more gain (Yagis, quads, phased arrays, etc.). Higher gain antennas are usually considered much more costly, but you can build gain antennas at reasonable cost using wire, rope and a few trees or other supports (hopefully aimed in a prefered direction). Other options might include two element Yagis or Moxon rectangles for the 10m or 15m band - they are relatively small and can be homebrewed at relatively small expense.

Try talking to other contesters and DXers in your area. They might know of an old tribander not being used (or a bigger station to operate). When I was 17, a local offered a 3 element tribander at a low price which was quickly placed on a 6 meter high pole and rotated using rope tied to one end of the boom. It really boosted the contest scores!

Here are some of the antennas I would be investigating in your situation - I would try to erect multiple antennas even if they are simple dipoles:

160m: inverted-L
80m: inverted-L (DX) inverted-vee/dipole (local)
40m: wire vertical/inverted-L (DX) inverted-vee/dipole (local)
20m: tribander (used), wire Yagi or dipole
15m: tribander (used) or homebrew 2 element Yagi/Moxon rectangle
10m: tribander (used) or homebrew 2 element Yagi/Moxon rectangle

The MFJ-1792 or Butternut HF-2V are decent 40/80m verticals if you intend to buy. The verticals will require several ground radials for best performance (unless you can elevate the bases a good amount).

Also, for lots of contest information look at http://www.contesting.com

There is information about several mailing lists at this site. I'd suggest the cq-contest, TowerTalk, WWYC (more info below), and 3830 lists for contest and antenna related discussions. There are many contesters on these mailing lists that would be willing to offer their advice. You can look through the archives at http://lists.contesting.com/ or search the list archives from main page at http://www.contesting.com

Finally, I recommend checking into the World Wide Young Contesters (WWYC) if you haven't already. Their web site is http://wwyc.webbg.com (I get an error running Netscape, but it is OK using IE).

Good luck & 73,

Steve

It's good that you finally showed up to "save the day"... This tread could have gotten off the subject, and certainly no other threads do....

If you were interested in answering his question instead of looking for someone to bitch at, you could have answered earlier or even answered him directly.

Just in case you don't know how to do that, you would first highlight his original message, then select, "reply to sender". But since you wanted to be sure that we could see all your knowledge, you were right to select "reply to group".

If you paid attention you would have noticed that he did ask for comments about the GAP.

sounds like a cool project. my guess is that if its a freq requireing a lic to broadcast on, you need one. esp. cause something going up high (while not a lot of juice) will send its signal quite far (something like the horizon at a min). good luck, i'm sure others here have lots of real information and not just random thoughts. -j

Check over at rec.models.rockets. Several people there are also hams
that have launched video transmitters, are familiar with the rules they
had to follow, and may be able to help you out.

My wife and I got licensed recently, and are active in hobby rocketry in
the Seattle area. One of the projects we have "on the back burner" is
to do a video rocket.

The following was passed on to me.

Vertex Standard USA (AKA Yeasu) is moving to a new location effective
1 April 2002. The new Address and phone number are as follows:

Vertex Standard USA

10900 Walker Street

Cypress, CA 90630

714-827-7600

The 800 number I believe is still valid for the new location.

Amateur Radio Newsline™ Report 1285 - March 29 2002

Amateur Radio Newsline report number 1285 with a release date of Friday, March 29th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Russia orbits a new but temporary ham radio satellite and the ARRL says its time to re farm the Novice bands. What is refarming? Find out on Amateur Radio Newsline report number 1285 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: RS-21 IN OBIT

Yet another ham radio satellite is now in space. This one is the Russian Radio Sport 21. Roy Neal, K6DUE, has the details:

--

Meet the latest ham radio satellite: RS-21. The newest ham radio satellite.

The satellite's formal name is the Russian-Australian Scientific and Educational Microsatellite Kolibri-2000. To most hams however, it is simply Radio Sport 21.

According to the AMSAT News Service, the new ham-sat was remotely launched on March 20th from a Russian Progress M-1-7 launcher that had brought supplies to the International Space Station. That launch took place after the Progress ship had un-docked from the I-S-S.

Alex Zaitzev, RW3DZ, the director of the Microsat Office of the Russian Space Research Institute, describes RS-21 as a non-government, non-commercial project, built with cooperation from students in Russia and Australia. It is currently in a circular orbit just over 200 miles above the Earth and on the air. Downlink frequencies are listed as 145.825 and 435.335 MHz.

The birds uses both CW and FSK for its telemetry transmissions, but it wont last very long. Zaitzev says that RS-21 was designed with a limited lifespan and that it will fall back into the atmosphere during the late winter or spring months. Till then though, RW3DZ, says that the satellite will send down data and digitally recorded voice messages.

For the Amateur Radio Newsline, Roy Neal, K6DUE.

--

Meantime, the L.A. Daily News reports that the current crew on board the International Space Station will be spending an extra month in orbit. Russian Cosmonaut Commander Yuri Onufrienko, RK3DUO along with American Astronauts Carl Walz, KC5TIE and Dan Bursch, KD5PNU will spend the time correcting problems with the Canadian built robotic arm used for ongoing I-S-S construction. This will mean the crew will be on board for a total of 189 days. This will be a new record for the US crew members on board the International Space Station. (AMSAT-NA)

**

HAM RADIO IN SPACE: HIGH SCHOOL CHEMISTRY EXPERIMENT TO THE ISS

A small science experiment at two Bloomington, Indiana High Schools is now headed for the International Space Station. A ham radio operator is helping to make it happen. Amateur News Weekly’s Jack Parker, W8ISH, has the details from the home of Indiana University.

--

Eleven honors chemistry students from Bloomington North and Bloomington South High Schools have collaborated with NASA to prepare a protein crystal growth experiment. The protein, frozen since November, is now ready to be transported to the International Space Station.

Bloomington North advanced chemistry teacher Neil Rapp, WB9VPG will join the students as they travel to the Kennedy Space Center for the April 4th launch of the Atlantis space shuttle. Once the experiment is aboard the International Space Station, it will thaw and allow the crystals to grow. After the crystals are formed, they will be transported back to earth and studied by NASA, and eventually returned to the Bloomington High schools.

According to Neil Rapp, the formation of protein crystals is an important step in the development of drugs designed to cure various diseases.

Reporting for Amateur News Weekly, this is Jack Parker W8ISH.

--

All eleven chemistry students will be on hand for the launch of Atlantis. Each will receive a plaque and shirts designed to commemorate the launch of their experiment into space. (WB9VPG)

**

ARRL TO FCC: TIME TO RE-EVALUATE THE NOVICE BANDS

The ARRL has asked the FCC to eliminate the 80, 40 and 15-meter Novice and Technician Plus Morse code subbands. It also wants the FCC to reuse that spectrum, in part, to expand the radiotelephone allocations on 80 and 40 meters. Amateur Radio Newsline’s Bruce Tennant, K6PZW has the details:

--

According to the ARRL Letter, a Petition for Rule Making filed March 22nd, the League requests that the FCC revise its Amateur Service rules in accordance with the modified Novice band refarming scheme the ARRL Board of Directors okayed in January. The Petition has not yet been put on public notice for comment.

Refarming is a government-ese term coined a few years back. Its a way of saying that spectrum assigned to a given radio service will be reassigned for other uses within that service.   In this case, reassigning spectrum now primerally dedicated to Novice C-W operation to various other modes.

If the FCC approves the plan, current Novice and Technician Plus licensees would be permitted to operate on the 80, 40, 15 and 10-meter General-class Morse code allocations at up to 200 watts output.

The ARRL's petition also asks the FCC to permit amateurs to use spread spectrum on the 222 to 225 MHz band. It also requests an expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for US territories and possessions that do not provide for mailing addresses. And it asks the FCC to clarify its rules to indicate that modulated CW is permitted for repeater station identification.

For the Amateur Radio Newsline, I’m I’m Bruce Tennant, K6PZW.

--

In its petition, the ARRL cited substantial advancements in the use of “digital techniques” in the HF bands such as PSK31 to bolster its assertion that a refarming plan is needed. The ARRL says that the Novice High Frequency sub-bands are underutilized and Amateur Radio cannot wait any longer on this issue. A copy of the ARRL's complete Petition for Rulemaking is available on the ARRL Web at www.arrl.org. (ARRL)

A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D SERVICE

A few weeks ago we reported that the FCC has refused to hear an appeal by an Illinois C-B operator convicted of Disorderly Conduct for interfering with a neighbors home entertainment electronics. In the days since that report first aired, it caused quite a stir on several Internet discussion groups. Everyone wants to know how a service that once boasted 3 out of every 5 Americans with radios in their cars could wind up where the local sheriff or policeman could take an operator off the air.

After a bit of research, the answer seemed pretty clear. In one word: Politics. Here is Amateur Radio Newsline’s South East Bureau Chief David Black, KB4KCH, with part 1 of a multi part look at the strange political side of 11 meter C-B.

--

When it comes to having political representation, most communication groups are in good shape. Hams have the American Radio Relay League looking after their political well being. Broadcasters have the powerful National Association of Broadcasters. Cellular telephone companies have the CTIA. Even the General Mobile Radio Service, which shares frequencies with the Family Radio Service, has representation amid the Personal Radio Steering Group. So, what form of communications lacks representation? That would be 11 meter, Class D Citizens Band radio. What does CB have? This:

--
Sound from 11 meter CB
--

Give CB a listen, and you hear lots of people using a service without any structure or formalized representation. Some might even call it anarchy.

--
More sound from 11 meters
--

Ironically, CB's lack of political power--as well as its inability to defend against bureaucratic attack--is not due to shortage of people using the airwaves. Many believe that next to cellular telephones, the second largest selling piece of 2-way radio equipment in the 20th century has been the CB radio.

During the gas crisis in the 1970s, many cars sported some sort of 11 meter whip and a cheap CB radio under the dash. Low cost 11 meter radios by the millions were manufactured, imported and sold. The industry had hobby magazines and several newspaper style newsletters devoted to CB radio.

CB operators outnumbered hams by at least 20 to one. And they outnumber GMRS users by 1000 to one.

But CB was not able to defend itself from outside pressures either back then or today. Why? Part of the reason goes back to CB’ers themselves in the 1970s and early 1980s. Most of them were not really interested in the service. It was just a utility. A way to help learn where to find the cheapest gasoline or avoid speed traps.

The CB radio service lacked any real monetary commitment. Without that, there was no political commitment. And when fuel prices began to ease, many but not all 11 meter operators pulled their radios out of their cars--and put them in the attic.

Then there were the few others, the die hard CB hobbyists. They treated CB channels 1 through 40 as a sort of ham radio-like hobby. Some operated illegally, but would take the chance just to make a DX contact. But they never organized. Why?

Different CB groups formed over the years. Many called themselves political messiahs of 11 meters. But many turned out to be bogus.

During the late 1970's and early 1980's, C-B radio scam artists were busy, trying to separate the 11 meter radio operator from his hard earned cash. As group after group appeared and then vanished, it became apparent to most using C-B that trusting anyone was too expensive. Now, more than 25 years later, trust in any C-B political organization seems little more than a remote possibility.

And what about the legal C-B operators? Those dedicated to public service? That part of the story, next week.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

Next week David tells us about the only successful C-B organization and the reason that it survived when the rest went away. (ARNewsline(tm))

**

SHORTWAVE: ARNEWSLINE VISITS AN SWL-FEST

From C-B to shortwave listening. Ham radio operators are not the only radio hobbyists who hold conventions. So do Short Wave Listeners and one of the most successful gatherings is Winterfest. Amateur Radio Newsline's Steve Coletti took his tape recorder and visited this years gathering. He has this report:

--
AUDIO ONLY - NO TEXT. Download MP3 audio at www.arnewsline.org by clicking on the newscast number.
--

It may not be the size of the Dayton Hamvention or Huntsville Hamfest, but to Short Wave Listeners, Winterfest is truly the best. (ARNewsline(tm))

**

RADIO GROUPS: NEW MURS USERS GROUP FORMING IN CYBERSPACE

We have covered C-B and short wave listening. How about MURS -- the newly created Multi-Use-Radio Service. Well, according to an Internet posting, an organization called The MURS OPEN Group has begun work to form an Internet-based MURS User's Group. This group will be a non-profit corporation whose main goal will be to encourage the growth of Multi-Use Radio Service. If you are interested in learning more, you can visit the group in cyberspace at: http://groups.yahoo.com/group/MURS-OPEN/ (MURS Open Group)

**

CONVENTIONS: WELCOME TO HAM RADIO AT NAB

If you are planning a trip to the upcoming National Association of Broadcasters convention, be advised that the hams of Las Vegas are expecting you. Bill Croghan, WB0KSW, says that the Las Vegas Radio Amateur Club repeaters are up, active and hard linked.

Bill Croghan is the Chief Engineer of Lotus Broadcasting in Las Vegas. He says that on two meters try 146.94, minus 600 kHz offset with a 100 Hz access tone. This machine is now located on the Hilton hotel immediately above the Convention center, but on the opposite tower. From this site it should be useable from deep inside the Convention center and easily from anywhere on the Las Vegas strip.

If you would rather use a U-H-F machine try 448.500, minus MHz offset also with a 100 Hz access tone. This system is hard linked to the 2 meter machine but located on the old Tropicana hotel site as in years past. With the two systems linked any ham attending N-A-B with either a 2 meter or 70 centimeter radio can have fun and stay in touch. The convention takes place April 8th through the 11th at the Las Vegas Convention Center in Las Vegas, Nevada. (BEAN)

**

CONVENTIONS: WELCOME TO THE NAB HAM RADIO RECEPTION

Also, this years N-A-B Ham Radio Reception will take place Wednesday Evening, April 10th at 6 PM following the close of the exhibit hall. Location is the Hilton Convention Center in Ballroom B. The gathering is being co-sponsored by C-Q Magazine and Kenwood Communications. C-Q Publisher Dick Ross, K2MGA and Editor Rich Moseson, W2VU, along with Kenwood’s Paul Middelton, K4NUH, will be there as your host.

Amateur Radio Newsline will also be loitering around the convention and the Ham Radio Reception. We will be represented by Producer Bill Pasternak WA6ITF and by Todd Hitzeroth, N6ZXJ, who serves on the Young Ham of the Year Award committee. (CQ, ARNewsline(tm))

**

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: KERMIT AND THE V-CHIP

Sesame Street’s Kermit the Frog has a new part-time job. According to news reports the little green guy will be put to work boosting the awareness of the television V-Chip.

The V-Chip is a mandatory internal accessory built into any T-V set larger than thirteen inches diagnal picture. The chip reads a digital code that contains a program's rating and can be programmed to block out television shows parents deem inappropriate for their kids.

Now the Hallmark Channel in conjunction with The Jim Henson Company, has donated the image of Kermit to the Federal Communications Commission for use in an upcoming promotional campaign to bring attention to the availability of the V-Chip. A new brochure to be distributed to the public by the FCC, the Hallmark Channel and other interest groups, will feature Kermit sporting a "V" with his fingers and urging parents to monitor the programming their children watch. (Published news reports)

**

INTERNATIONAL - CANADA: VE7BFK IS NEW ARDF COORDINATOR

Gordon D. Young, VE7BFK has been appointed as the Radio Amateurs of Canada National A-R-D-F Coordinator. Young first became interested in A-R-D-F when the Friendship Amateur Radio Society hosted the 3rd Friendship Radio Games in Victoria British Columbia back in 1993. He has since attended A-R-D-F events in Russia, Japan and the United States. He replaces Perry Creighton, VA7PC who has held that appointment for several years. (RAC)

**

INTERNATIONAL - ISRAEL: 500TH NEWSLETTER ON THE AIR

From Israel comes word that Mark Stern, 4Z4KX, recently celebrated the 500th edition of his ‘Newsletter on the Air’ for that nations Russian-speaking ham community. Stern, the former UP2OE, has been performing this service for the last 11 years every Saturday morning on 7.080 MHz.

Stern also seeks donations of used gear that he donates to newly arrived new-immigrant hams. As a result of his efforts many have gotten on the air in Israel in only a short time after their arrival in that nation.

And if all that were not enough for one ham, Stern is also the Israeli Award Manager and issues the awards and trophies for the Holyland and Israeli VHF-UHF Contests. (Hagal International)

**

DX

In D-X, hams are usually out looking for D-Xpeditions. Heres a twist. A future D-Xpedition is looking for you. Jeramy Boot, G4NJH, explains:

--

Have you always wanted to take part in a major D-Xpedition, but never known how to get on an expedition team? Now could be your chance. Ken Holdom, ZL4HU, the leader of 'The Kermadec DX Association's' planned operation from the Chatham Islands - ZL7 - later this year, is looking for experienced SSB and CW operators to accompany the group. "As this will be a 24-hour-per-day operation, we are looking for operators who feel they have the willingness and ability to operate during both day time and night time," Ken says. For further information please contact the Kermadec DX Association, PO Box 7, Clyde, Central Otago, New Zealand or e-mail to zl2hu@clear.net.nz.

--

Again, that e-mail address to apply is zl2hu@clear.net.nz (RSGB)

A D-Xpedition to San Felix became active on March 16th as X-R-Zero C. It was active for 14 days on all bands and modes. If you made contact, QSL via John Kennon, N7CQQ, P. O. Box 31553, Laughlin, Nevada 89028.

Lastly, N6DE and K6EP will be active from St. Croix through April 2nd. During the CQ World Wide S-S-B Contest, they will use the callsign WP2Z. QSL WP2Z contacts via KU9C, and non-contest QSO’s to each operator's home callsign address. (Various DX sources)

**

THAT FINAL ITEM: AN APRIL 1ST CB D-XPEDITION TO THE ISLE DU CONEY

Earlier in this week's newscast we reported that 11 meter C-B has no political clout. What it does have is a bunch of people who just want to have fun. Now, a group of them is planning what they call a People's Radio D-Xpedition from an exotic island location. Roving reporter Pierre Pullinmyleg is here with the details:

--
AUDIO ONLY - NO TEXT. Download MP3 audio at www.arnewsline.org
--

Hopefully, Pierre will be back a year from now to pull your leg once again.
(The April Fools Day File)

**

NEWSCAST CLOSE

Tired of pollution, traffic jams, and noise?
How about a vacation with a difference.
Imagine a cabin located on a farm in the Canadian wilderness completely surrounded by boreal forest.
Listen to wild birds. Hear the wind in the trees.
Watch hummingbirds whiz past your head and
dance among the wild flowers.
Spend some time with a flock of charming chickens.
Eat some organic vegetables from our large gardens available during spring, summer and fall.
Ideal for persons wishing to relax, lose some weight, get some exercise, recover from an illness, or operate an
amateur radio station with some first class antennas.
A great place for a honeymoon.
If you wish for dynamic night life and fancy restaurants, this is not the place for you,
however if you seek that rare commodity, peace and quiet, this is the right location.
The Upper Madawaska Valley with all its tourist attractions is at your disposal. Near Algonquin Park in Eastern Ontario. Cheap at any price!

Fellow Hams:

Anyone here associated with the American Red Cross, either locally or in the National Disaster Service Communications Function?

Does Sally's (Salvation Army) Disaster Service have a communications function?

Anybody work with FEMA in a communications capacity?

Has anyone thought about a 'rec.radio.amateur.publicservice' newsgroup?

Folks:

The Red Cross has kept 8 or 10 communications people in the New York area for the last 6 months. They come from all over the country and stay for a minimum of 3 weeks. About half of them are Ham Radio operators. If anyone is interested in the ARCs National Disaster Service communications function, just respond and I'll pass on any information.

Anyone out there already involved with the Red Cross (either locally or with the national Disaster Service)?

How about the Salvation Army? Sally also has a National Disaster Service. Do they have a communications function?

Anyone associated with FEMA communications?

Has anyone thought of   'alt.ham-radio.public-service' or rec.radio.amateur.public-service' NGs?

Quite a few hams are involved, at least at the local level, with ARC, but their primary organization may not be ARC.

The Salvation Army emergency communications group is called SATERN (Salvation Army Team Emergency Radio Network).

RACES (Radio Amateur Civil Emergency Service) is the group of hams affiliated with local city/town OEM (formerly Civil Defense) and with each state's EMA, which ties in with FEMA.

ARES (Amateur Radio Emergency Service) is another group of hams who stand ready in case of emergencies, affiliated with ARRL.

SKYWARN is a volunteer group of weather spotters who help the National Weather Service, a good number of whom are hams.

The ARRL supports these efforts and provides training, and has an Emergency Coordinator for each Section. Many local clubs actively support emergency communications. Start at www.ARRL.org

here are some links to local emergency communications groups:
http://www.races.net/links.html

Note that the level of activity varies quite a bit from place to place, there is a fair amount of overlap and redundancy, and that many hams are involved in more than one of these in some way.

```

I was looking for some information on some RS232 line drivers and came across this.

http://www.piclist.com/techref/io/serial/RCL1.htm

It is a TTL to RS232 level converter built into the shell of a DB-9. It would seem a simple thing to use this to interface to the serial port of a transceiver.

I have no connection with this company nor do I have any more information than what you see on their pages. I just thought it would be an interesting project and possibly easier/simpler than the MAX232/3 route.

73,

Barry - N4BUQ

CENTRALAB CERAMIC ROTARY SWITCH -This is a NEW/UNUSED Centralab ceramic rotary switch. Box has faded "2005" on the label, but not sure the box matches the switch. The switch appears to be a 2-pole-12-throw rotary suitable for audio or low power RF applications. The stops on the switch mechanism currently block it to 2-throw positions, but by changing the tabs it appears that all 12 switch positions can be enabled. Not sure if contacts are copper or silver plate. $18, I ship. Pay by money order or cashiers check. Email to dt0124@comcast.net

Looking for Kenwood DG-1 Digital display for Kenwood TS-820. Anybody have one or know where I can find one?
TIA

Bill

Hi all,

Log Analyser version 1.6.0 is now available.

This release adds the much requested WACARS Log Importing function.

This is a free upgrade for registered users. A demo and the upgrade
can be downloaded from http://www.acarsonline.co.uk

(This is the release version and is now available from our main
download site).

Thanks,

Mark Avey

Fast-scan ham TV should have an exemption for incidental music, where the music is not the intended purpose of the transmission. For example, I can show a home video to a friend on ATV - unless it is a wedding video or a birthday video, because those have incidental music. This is dumb and arbitrary.

Or, what if you connect a video game console to an ATV transmitter. If you build an interface to send the control inputs back over another radio channel, hams in several locations could play a multiplayer game. This cannot be done over the Internet unless the game is specifically written for it, but it could be done over ATV. The only thing preventing it is that the game might play music, and we aren't supposed to have even incidental music. Again, dumb and arbitrary. Model plane and rocket video are allowed.

I understand some countries do have an exemption like this. Has anyone ever petitioned for one in the States?

Mike KG6KRF

hmmm I find that rather interesting as New York City Ares of which I am a member was told to stand down 2 weeks after the 11.
The ARC in New York City is communicatiosn dumb. They use the low band and have a hard time just getting thier signal out of the city on most occassions. (I know this to be a fact as I am DSHR and was a local team leader for 3 years.

They don't want to know about Ham Radio. My club offered them repeater equipment at no cost to help enhance their operation. When we started a ne Unit strictly for disaster communications they shunned us. We were a part of the 9-11 job and also the American Airlines crash wheich happened about two miles form our Com center.Yes Com center. If you would like I can post some pictures and news articles that were done about us.

Now as far as communications people for 6 months. I find that a bit hard to swollow , but I would not doubt anything that they are doing here in New York.
The Salvation army has a team called SATERN which the members of the unit are involved in as well. We are also SKYWARN. Getting back to SATERN they have Hams and GMRS ops all over the country and do a hell of a job. Instead of rasing the stop flag they have the sense to ask for help.
You might want to take a look at their website

ARES has had and still has OPs available but nary a word from the ARC. I might also add that the ARC has left ARES with a bad tatse in the mouth.
When requested they would not provide a copy of the log containing the names and callsigns of the almost 1000 hams that responded to 9-11 and worked 12 to 15 hour shifts. Alot of these hams did not even get a handshake by them let a lone a pat on the back.

It's a shame

"Mike Ingle" <inglem@pobox.removespam.com> wrote

> Has anyone ever petitioned for one in the States?

Such an exemption is already in the rules for space shuttle communications, so the precedent exists.

No reason for you not to petition for something similar if you feel it is needed. The worst that can happen is that they say "No".

Hi,

I'm 16, and have been licensed for just over a year now. I currently have
G5RV, and am quite disappointed with it.

My main interest within the hobby is contesting - my G5RV doesn't really cut
the cake when it comes to contesting!

So, I'm now looking at vertical antennas. I was wondering how well they
perform, both on TX and RX, but am looking for a vertical with the
following:

- No traps
- No need for long (or any) counterpoises/radials

I have come across the GAP TITAN DX, but if anyone knows a good performing
vertical antenna, would they please let me know?

Many thanks.

73...

Hi Simon,

Almost across the board, GAP products do not provide very useful performance for the lowest band offered. That is, if the model is built for 80M, it probably will only begin to work on 40M. They may load suitably, but still not perform very well. Once you move to a higher band, things improve, but not beyond the expectation of a common quarterwave vertical.

The simplest advice is to put your antenna higher, and build it bigger (but not too big, 5/8ths is the largest you should attempt for a vertical). Height is the most important. Sacrifice everything else (until the antenna becomes too small, less than 1/10th wavelength) and make up for it with a tuner.

You will undoubtedly get good advice in regard to your G5RV here, and the alternatives to it like Cecil's tunerless dipole. I mention this, because as bad as you think it is, it will probably prove to be more useful than a GAP.

I can only compare the G5RV against an R5, but I'd take the G5RV anyday. It performs heads and shoulders above the R5. I have had my G5RV up for about a year and it has worked great except on 40 meters where I can not obtain anything close to resonance.

What is Cecil's tunerless dipole? Is there on line information?

Congrats on the licence.

Be aware that the antenna of which you speak was designed as a compromise all (pre-WARC) band antenna with a low-enough SWR for the valved PA transmitters of the day. There are those who say it is not really suitable for a modern solid-state transmitter. Even with an ATU, some of the compromises remain, such as radiation from the feeder on certain bands.

>My main interest within the hobby is contesting - my G5RV doesn't really cut
>the cake when it comes to contesting!

I'm not in the least surprised.

>So, I'm now looking at vertical antennas. I was wondering how well they
>perform, both on TX and RX, but am looking for a vertical with the
>following:
>- No traps

You mean not necessarily any traps.

>- No need for long (or any) counterpoises/radials

I'm afraid that you _will_ need radials, even for a ground mounted antenna, unless it is a half-wave. A vertical is form of monopole, and it needs something to work against. This is either the planet Earth, or if mounted on a mast, a set of radials. Radials for ground mounting help the antenna connect to planet Earth, and reduce losses (mainly resistive).

But there are other problems with verticals besides ground losses and inefficiency. Noise tends to be vertically polarized, and as the radiation pattern is omnidirectional and vertically-polarized, a vertical will collect it all. There's no front-to-back ratio of a beam to help you here. Field-strengths locally can be higher than a beam, leading to the possibility of EMC problems.

But it's not all doom-and-gloom. A vertical can illuminate the ionosphere more evenly than a beam, and - with plenty of radials! - a low radiation angle and reasonable efficiency. You can take advantage of this by being ready for the band of interest opening for you for the DX, before the boys with beams. But you could have as little as ten to twenty minutes of this; it also operates this way on band closing. In between, of course, you're going to be outgunned.

>I have come across the GAP TITAN DX, but if anyone knows a good performing
>vertical antenna, would they please let me know?

I've tried to say above that ALL antennas have strengths and weakness; advantages and disadvantages; a named antenna hasn't necessarily any advantages performance-wise that one you make yourself. What you MUST do is a bit of background reading about antennas, finding out their individual characteristics, and finding which one(s) will help you in your goal. There might be one type of antenna that can do more things for you than another, but none will do everything.

In engineering terms you need to define what service you need from your gear, and then find what components - antenna in this case - will fulfill that. When you've done that and are getting the results, you will have engineered a solution, and learned much on the way. There are no 'silver bullet' solutions!

I hope you find this of use.

Good luck with the contesting.

I was under the impression that the feeder (the ladderline) was SUPPOSED to radiate, which is why I got such good results with my G5RV against both vertically and horizontally polarized contacts. I could be wrong.

You're quite right. What I was getting at was that the radiation pattern might not be what you think it is, and you could be trying to work DX in a null rather than a lobe with some gain. There could also be noise-pickup on the vertical section. But I was also trying to keep it simple. You can't teach 'antennas' in one posting...

Actually - no!

If the G5RV is reasonably symmetrical in the air without too many obstructions around it, and it is tuned with a properly balanced tuner then it will NOT radiate from the feeder on any bands.

If any of these conditions are not true, however, then there may well be some imbalance in the feeder and radiation will result - but not by design.

ANY multiband antenna of any construction, shape or design is a compromise over a single-band, single purpose antenna!

Now, to the original question - I have an 80m dipole with tuned open-wire feeder at 35ft and a GAP Titan mounted in a reasonably clear spot on flat sandy soil. On all bands from 40m to 10m the GAP is at least as good as the dipole, and on some bands for certain QSOs is better. DX performance on 40m & 30m is generally better on the vertical, but mainly because of reduced european signal levels. As somebody said before 80m performance is poor on the GAP. Its not a mirical antenna, but its at least as good as any other multi-bander and has a good bandwidth on all bands except 80m. It also costs a lot of money ... a lot more than I had when I was 16!

Neither of these antennas will be competitive in large contests on any bands .... you need a 3kW amplifier and all controls turned to maximum (especially the speech processor) to join in! (It also helps if you listen on the frequency before transmitting, but that appears to be optional!)

Malcolm G4CXT

ALL ham radio question pools fro the US must be the same. Just be sure to get the latest update.

Some forms may have an explinaton of the answers but the part where you answer A,B,C, or D must read the same. If you want to pass the test then get the book that has just the questons and answers and don't get the longer versions that can confuse you.

Simon,

Any antenna will benifit from having a good ground under it, the 'Gap' antennas also. While I'm not much of a 'G5RV' fan, it will work as well, or better, than any of the 'no-radial' vertical antennas on the market. As someone has already said, elevation will do more for you than anything else will, with the G5RV.

The 'Gap' antennas may not have the 'classic' style of traps, but they do use devices that serve the same purpose, and have about the same 'losses'. The 'trapless' thing is a sales gimmic, and should be treated as such, lump it in the same catagory as their 'gain' figures...

'Doc

Verticals radiate equally poorly in all directions.

If you are not able to put up a tower with a beam, put up an all-band dipole. You will need 135 feet of antenna wire, 100 feet or so of open-wire lead (ladder line) and an antenna tuner to match the unbalanced output of the transmitter to the balanced line.

Feed the 135 feet of antenna wire in the middle with the ladder line.

Look around the various ham radio sites -- the AC6V site is a good place to start -- and you will find dealers selling an already assembled all-band dipole.

Ask someone at the ARRL before the FCC. If it falls in a gray
area, then it may be legal. But if you ask someone at the FCC,
they will probably say "no" to cover their ass in a gray situation.

Hi,
Is there anyone who can provide me the following information:

1) In 1200baud FSK how the bits are represented? Always Mark for "1"
and always Space for "0" ?
2) In an attempt to decode 1200baud FSK packet with soundcard, how
many points FFT is optimal ?
3) How can I concentrate my program to the start of the transmittion
and not to the noise ?

Thanks in advance

Nick Kavalieris

Hi there!

A fellow amateur is looking for 2 (two) FTS17 tone boards for the Yaesu
FT-23 and FT-411 handheld radios.

If you have any surplus to requirements, please email Andrew at
zr1sbm@freemail.absa.co.za

Thanks in advance!

Regards.

What's wrong with the longer versions - if they actually teach you some theory?

Hi folks,

PHEW! Thanks to everyone who replied to me, both personally, and through the newsgroups.

I've had quite a mixed response from people saying that verticals only work best for over the sea, and horizontally polarized antennas work better over land.

But I've had people saying that the GAP works well, on all bands, both on RX and TX for DX only (EU stuff on the 5RV)! Oh and the Force 12 Sigma-V vertical.

I have also been pointed at the 'CobWebb' antenna - which is claimed to have 5 - 7dBi gain on all bands. The ham which pointed me in the direction of this antenna... Take a look at http://www.g3tpw.ukgateway.net/ - although I'm limited for space, I might just about get away with this.

Looks like I might stick with a horizontally-polarized antenna for now - looks like they may be best for contesting. Has anyone else got any more suggestions?

Thanks in advance,

73

hey ken
i have 2 of the SS30s which if i where you i would get that rather than the ss18
better to have to much amps and not need it than to need it and not have it
i am running an icom 706 MrkII and a kenwood TM721 dual band mobile and have had
no problems with either rig and no reports of hums or anyhting nasty on my
signal
and those PS are very light so shipping is cheap on them
so if i where you i would buy as big of a SS you can afford
that way if you get an HF rig or a VHF amp which would draw well over 25 amps
your all set and not have to buy a new power supply

Does anyone have a copy of the schematic for the Icom IC 821 or know which
pot number is for the devaition control?

Thanks

FS: I have a very nice Norcal 40A 40 meter qrp transceiver. It has the built in tick 2 memory keyer. Ive made 20 or 30 qsos with it and was quite surprised at the good performance of it. qsk works well too. Have the manual. Its excess to my needs so I will part with it for $100 shipped and insured. Thanks -Lew KlNDV

Amateur Radio Newsline Report 1283 – March 15, 2002

Amateur Radio Newsline report number 1283 with a release date of Friday, March 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring at the FCC should not impact on Amateur Radio and a first for the Dayton Hamvention. These stories are first on Amateur Radio Newsline report number 1283 coming your way right now.

(Billboard Cart Here)

**

REGULATORY ISSUES : FCC REORGANIZES LATER THIS MONTH

A reorganization of the Federal Communications Commission is set to become final later this month. This, as the agency stresses that realignment of responsibilities between various bureaus will make it more efficient and help it better respond to a changing technological marketplace. Amateur Radio Newsline’s David Black, KB4KCH, takes a look at some of the changes.

--
It’s an independent government agency that reports directly to Congress. It’s mission is to regulate communications. One of the services it oversees is Amateur Radio, but most observers of the reorganization of the Federal Communications Commission see little impact on hobby communications.

As part of the reorganization a new Media Bureau will combine the duties of the current Cable and Mass Media bureaus. The goal of the combined bureau? To treat competitors of multiple entertainment delivery systems equally and consistently. This includes broadcasters, cable operators and satellite service providers to name only a few.

Other changes include a renamed Consumer and Governmental Affairs Bureau. Also, a realigned International Bureau still will handle satellite licensing but most policy issues will now be the domain of the newly created Media Bureau.

These are just a few of many changes taking place. Most appear aimed at commercial interests. For ham radio, C-B, G-M-R-S and most two-way radio users the shift will probably be transparent. In other words, for these spectrum users and most others, it looks like business as usual within a soon to be restructured FCC.

From the South-East Bureau in Birmingham Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline. Don.
--

Congress endorsed the plan late last year. The FCC then approved the overhaul in January. The changes will take effect March 25th. You can read more on the web at www.fcc.gov. (ARNewsline (tm) from published news reports)

**

RADIO LAW: FCC REFUSES TO SIDE WITH CB’ER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio.   Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--
Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its preview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create. (W5YI Report)

**

HAM RADIO RIGHTS: NM. AND W.VA. JOIN THE PRB-1 BANDWAGON

The ARRL Letter reports that New Mexico and West Virginia have become the 14th and 15th states to adopt pro Amateur Radio antenna bills based on the limited federal preemption known as PRB-1. Amateur Radio Newsline’s Jeff Clark, K8JAC, reports:

We have this report:

--

In New Mexico Governor Gary Johnson signed House Bill 314 on March 5th. This, after it easily passed both houses of the legislature last month with just two opposing votes during a short session that typically only deals with appropriations bills. Called New Mexico's "Emergency Communication Preservation Act" the measure was sponsored by State Representative Mimi Stewart and Senator Ramsay Gorham. It stipulates that municipal or county ordinances regulating Amateur Radio antennas cannot obstruct or preclude amateur radio service communications. Also, that such ordinances shall reasonably accommodate amateur radio service communications.

Here in West Virginia Governor Bob Wise signed House Bill 4335 into law on March 7th. The bill provides that antenna structures may be erected at heights and dimensions sufficient to accommodate amateur radio service communications but does not include a minimum regulatory height schedule. The measure also exempts Amateur Radio antenna towers constructed prior to the effective date from subsequent zoning regulation changes.

From Charleston West Virginia, I’m Jeff Clark, K8JAC.

--

In signing the West Virginia bill into law, Governor Wise, whose late father held the call sign W-A-8-A-Y-P, also proclaimed March 7 as Amateur Radio Operators Appreciation Day across the state. (ARRL)

AMERICA AT WAR: NEW TERRORISM ALERT SYSTEM

The United States has a new color-coded terrorism warning system. It was revealed on Tuesday, March 12th by Homeland Security chief Tom Ridge.

The five-level system is a response to public complaints that broad terror alerts issued by the government since the Sept. 11 attacks raised alarm without providing useful guidance. The lowest-status warning is green, followed by blue, yellow, orange and red as the perceived dangers intensify.

As the terrorism warning system was unveiled, Ridge said that the nation is on yellow alert. This means that the United States is facing a significant risk of danger but not the highest stage.

The alert system is in force immediately for federal agencies, and Ridge is urging state and local governments to adopt it, too. It will be subject to a 45-day comment period, after which it probably will be revised. It’s not known what part if any Amateur Radio will play in the new enhanced terrorism alert scheme. (Published news reports)

**

ENFORCEMENT: TAKE THAT UNCOORDINATED REPEATER OFF THE AIR

The FCC has told the operator of an uncoordinated North Carolina repeater to stop interfering with a coordinated machine, even if it means immediately taking his system off the air. This is the edict handed down to the operators of the NY4X repeater by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH.

--
Hollingsworth: “ We also notified Richard Howell, NY4X, of Greer South Carolina and John Parker, AG4AZ, of Brevard Norrth Carolina that upon reciept of the letter, the NY4X repeater that they operate had to either shut down, obtain coordination or submit a detailed plan to the Commission to prevent interference to the KU4OL [repeater].”

“Now this interference has been going on for quite some time. We notified Parker and Howell back in November that something had to be done. Nothing was accomplished in regard to coordination and nothing was done in regard to the interference.”
--

Hollingsworth letter says that Howell and Parker had more than ample time to fulfill their obligation under Section 97.205 of the Commission’s rules. And late word is that the repeater has been shut down. (FCC, RAIN)

**

ENFORCEMENT: TAKE THAT BROKEN REPEATER OFF THE AIR

The NY4X repeater is not the only machine currently under FCC scrutiny. Another one is in Northern California. This one is having technical problems and is causing interference to machines on adjacent channel pairs. Again, the FCC’s Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We notified Wendall Peterson of Walnut Creek California, operator of the K6POU repeater that more than enough time has elapsed for him to correct the technical and control problems with the repeater. His earlier response to our inquiry showed that the bandwidth was indeed so wide that it caused problems to two other repeaters. We have gotten complaints about that. And the repeater system is just not operating in accordance with good Amateur practice.”
--

Hollingsworth says that his office expects the problems with the repeater to be corrected or that the machine will be taken off the air. He also gave Peterson 20 days from the date of his letter to respond. (FCC, RAIN)

**

ENFORCEMENT: THE RESPONSIBILITY OF REPEATER OWNERS

The FCC enforcement involving the NY4X and K-6POU repeaters are just the latest in a series of actions aimed at cleaning up the problems that have been plaguing the F-M community. Whether it’s an uncoordinated repeater causing havoc to a coordinated machine, or a long established system in need of maintenance, the FCC’s Hollingsworth says responsibility comes with repeater ownership:

--
Hollingsworth: “We want to emphasize that repeaters are voluntary. Nobody has to put one up. But if you do put one up you have a responsibility to maintain it, to get coordination if that’s necessary, and to operate in accordance with good Amateur practices, especially if other repeaters are being detrimentally affected.”
--

In reality, the only things the FCC is asking of those who own and operate repeaters is to be good neighbors and to adhere to the proper technical standards. In this way, the repeaters themselves can better serve their service area and the ham radio community in it. (FCC, RAIN)

**

RESCUE RADIO: KNOWING WHERE YOU ARE IN THE MID WEST

If you drive the highways and by-ways of Kentucky, you need never worry again about where you are. And if you get in a bind, rescuers will be able to find you. That is, if you are a ham radio operator equipped with a mobile APRS station. Jack Parker, W8ISH, of Amateur News Weekly, says that in his part of the world it is a mode that is truly coming of age:

--

Good news from the Kentuckey Automatic Position Reporting Society” their network of APRS digipeters is growing like well bred Kentucky Race Horses.

According to Brian Walker, KC4FIE, several new sites will be coming on line very soon. New digi’s are planned for Grand Rivers, Morgantown, Owensboro, Lawrenceburg, and Dry Ridge to name a few.

The Murry State University club has added a digipeter and two stations along the Kentuckey – Tennessee border have extended APRS coverage into that state. These efforts effective extend the Mid-West network of APRS digipeters established by the Tri-State Working Group in Ohio, Indiana and Illinois.

If you need more information on the Automatic Position Reporting System just check the APRS Working Group website at www.tawg.org.

Reporting for Amateur News Weekly, this is Jack Parker, W8ISH.

--

With interest in A-P-R-S growing and ham gear that includes the mode as a standard feature, look for a defacto nationwide network to be in place by the end of the decade. (ANW)

**

HAMVENTION 2002: HAM TESTS WILL BE AT THE HARA

The Dayton Hamvention has asked that we pass along a correction to some information in its recently mailed pre-show brochure. The pamphlet incorrectly lists Meadowdale High School as the venue for Amateur Radio license exams. This is incorrect. The Hamvention says that all license exams will be held at the HARA Arena Hamvention site. (Hamvention(r))

**

HAMVENTION 2002: QCWA BANQUET

And attention QCWA members. This years annual banquet in conjunction with the Dayton Hamvention will be hosted by the South West Ohio chapter and will be held on Friday, May 17th. The venue is Alex's Continental Restaurant near Miamisburg. Starting time is 7:30 P.M. and reservations are required.

This years speaker will be General Raymond Moorman. He will be talking about the United States Air Force Museum and plans for the upcoming Centennial of Flight celebration in 2003. For more information and to make reservations please contact Ed Sonnanstine by e-mail to EdSonny@aol.com (QCWA)

**

CONVENTIONS - UTAH: UTAH HAMFEST

The 2002 Rocky Mountain Division ARRL Convention and 2002 Utah Hamfest will be held July 12th to the 14th at Ruby's Inn at Bryce, Utah. The venue is near Bryce Canyon National Park. For more information please visit www.utahhamfest.org on the world wide web. (Utah Hamfest)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are being solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held this September in Denver, Colorado. Presentations will also be publicized in the Conference Proceedings. Submission of papers is due by August 5th and in-person presentation at the conference is not required for publication. Conference registration and additional details are available on the web at www.tapr.org/dcc (TAPR, ARRL)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www dot a r newsline dot o-r-g.

(5 sec pause here)

**

NAMES IN THE NEWS: HELPING HAND NET

We want to take a moment to welcome a new and very interesting net to the Amateur Radio Newsline family. It is on the AD6XK repeater here in Los Angeles California on 145.440 MHz.

What makes this net very special is that its Control Operator Simon Rosconi, K6DXN, is visually impaired. According to Dave Estrada, KD6HDX, Rosconi lost his vision at age 6. Estrada says that even without sight, Rosconi works 40 hours a week, and still finds time to volunteer his time as control operator for the nets.

But Rosconi is not the only vision impaired ham involved. Estrada tells Amateur Radio Newsline that Brian Coponiti, KG6BVO, who is also partially blind, has also volunteered. Coponiti downloads and plays back Amateur Radio Newsline to the net.

Estrada adds that this particular repeater group also has two other operators that are visually impaired. They are Gary La Duke, WB6WJW and Ivan Simer, K6TTA. (KD6HDX)

**

NAMES IN THE NEWS: EDWARD T. CLEGG, W8LOY FAMILY CELEBRATION

A few weeks ago we told you about plans by the family of the late Edward T. Clegg, W8LOY, to celebrate the life of this ham radio pioneer. The gathering is being planned by Ed’s widow Martie, her daughter Linda and Linda’s husband Rob Mc Guffie, K2HZN. Recently, RAIN producer Hap Holly, KC9RP, had a chance to speak with Rob about the upcoming event:

--
NO TEXT AVAILABLE - AUDIO ONLY
--

Hap conducted an extensive interview with Rob Mc Guffie. It really tells the whole story of Ed Clegg and his famed Clegg Labs. Part 1 is online right now at www.rainreport.com or by telephone at 847-827-7246. (RAIN)

**

RADIO REGULATIONS: AVOIDING A PHONE NUMBER CRUNCH

The nation's supply of telephone phone numbers is depleting rapidly and the government is taking steps to make sure what is left lasts longer. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more:

--
Over the past several years, area codes have multiplied to cope with the explosion in technology. Regions have responded by splitting up area codes among geographic areas or laying another area code over an existing one.

But in 1996 the Federal Communications Commission banned such overlays dedicated to specific kinds of technology. The Commission enacted the ban because it considered separate area codes for cellular telephones phones and pagers unfair to wireless companies and their customers. This is because everyone would have to dial 10 digits instead of seven to reach wireless customers.

But states including California, Massachusetts and Ohio had been been asking for ways to prevent existing area codes from running out of phone numbers, the agency said. The FCC says that it will now hear proposals from states on how they intend to conserve area codes on a case-by-case basis, including plans to use technology-specific area codes.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in West Orange New Jersey.

--

The FCC, which is responsible for overseeing the supply of phone numbers, says that without action the number pool will run out in less than ten years. (FCC)

**

HAM RADIO BUSINESS: A NEW HOME FOR VERTEX STANDARD/YAESU

Vertex Standard USA, better known in ham radio circles as Yaesu, is moving to a huge, beautiful new facility. The new address is Vertex Standard U-S-A, 10900 Walker Street, Cypress, California, 90630. The new main phone number is area code 714-827-7600. All e-mail addresses will remain the same but telephone extensions will change. Vertex Standard makes the move -- no joke -- on Monday, April 1st. (Vertex-Standard)

**

INTERNATIONAL-CANADA: VE7BFK IS NEW RAC ARDF COORDINATOR

Radio Amateurs of Canada has named Gordon Young, VE7BFK as it's news R-A-C National Amateur Radio Direction Finding Coordinator. Young replaces Perry Creighton, VA7PC who held that appointment for the past several years. (RAC)

**

CONTESTS: SOUTH WEST OKLAHOMA SPRINTS

The first ever South West Oklahoma Spring Sprints sponsored by the Lawton VHF Contesting Club will take place in just a few weeks. Sprints are short period contests held primarily on a specific band or using a specific mode. The South West Oklahoma Spring Sprints are band exclusive. The 2 meter sprint is on April 1st from 7 pm to 11 p.m. Central U-S time. The 70 centimeter sprint is April 13th also from 7 to 11 Central. Both are open to all Oklahoma hams living south of Interstate highway 40 and West of Interstate 35. For more information e-mail ne0p@arrl.net (VHF Reflector)

**

DX

In DX, K8PT and K3PLV are in the Channel Islands and operating as MJ slash K8PT and MJ slash K3PLV from Jersey through the 19th of March. The emphasis is on CW and RTTY in the WARC bands during daylight and 30, 40 and 80 meters during the evenings. Q-S-L as directed on the air. (RSGB)

Also word that Laurence Howell, GM4DMA, who is now resident in Anchorage, Alaska, will be travelling to warmer climates. This, as part of his work for the youth development charity Raleigh International. Howell say that he plans to be active as V51 slash G4DMA from Namibia from the 16th of March for two weeks. Look for him on 160 through 6 meters as his work schedule allows. (RSGB)

**

THAT FINAL ITEM: A WEDDING AT HAMVENTION 2002

And finally this week, get ready for a first. The first ever wedding to be held at the Dayton Hamvention.

No, we are not kidding. For the first time in Hamvention history, wedding vows will be exchanged at the show. This as Cyndi Krieger and Mark Elliot, N8WZW, will be married Saturday, May 18th at the HARA Arena during Hamvention 2002.

Mark and Cyndi met about thirteen years ago through a mutual friend. On their first date Mark and Cyndi went out for dinner and a movie. According to Hamvention sources, they have been an "item" ever since.

Mark introduced Cyndi to amateur radio by going to a hamfest. Cyndi had no idea what a hamfest was, but it sounded interesting. It was and she was hooked! Cyndi is now studying for her license and may test for it before Hamvention weekend.

Why get married at Hamvention? Mark and Cyndi couldn't think of a better place to share their love for each other and for amateur radio than by getting married at the world's largest amateur radio trade show. The ceremony takes place at 3 PM in Forum Room 3 immediately following the Amateur Radio Newsline produced Ham Radio Town Meeting. (Hamvention (r))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the Dayton Hamvention, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

As a resident of Canada's most easterly province thank you for the mention of the oldest yet discovered Viking settlement in North America. It is/was at Lanse Aux Meadows on the tip of the Great Northern Peninsula of the island portion of this Canadian province, of Newfoundland and Labrador. Their leader was Leif Erikson sp? (Eric the Red?) Lanse Aux M ...... actually means "Bay of Jellyfishes", from the Spanish/Portuguese 'Meduse' for jellyfish which are still abundant today.

And the Portuguese and Spanish etc. were over here too! Including Basque whaling stations at Red Bay Labrador well before the mid 1400s! But that's another bit of history.

I guess Leif's call sign would have been V1KNG! Strictly manual operation though.

International recognition of the site excavations and discoveries have confirmed that 'Europeans', Norse Vikings from Greenland settled, lived there, forged metal and so on, for at least several years just before 900 AD. There is some indication too that from there they explored south along the North American coast, past what is now Nova Scotia Canada, possibly as far south as Boston, New England etc. In the Viking Sagas for example they describe grapes which do not grow, naturally, this far north; even if the climate was warmer back then.

And oh yes, they got into squabbles with the existing residents, whom they called 'Skraelings'; I guess today we would use the term 'First Nations People' or perhaps 'Original or Aboriginal Inhabitants' who had been here we gather for thousands of years!

I would imagine that the Vikings were using 'Muscle Power' at the rate of about half a kilowatt per oar per hour; plus wind power. BTW the Viking voyages were commemorated some years ago by modern day adventurers who used satellite navigation, amateur radio and more comfortable living conditions!

There is also some historical indication that the Irish monk, St. Brendan journeyed to North America in an open leather boat made from sewn cattle skins, tallow etc. around the year 840 AD, before the Vikings! That was also re-enacted some years ago. Thus proving that those voyages were possible even if dangerous with the technology available back then. No coastguard watch on 2182 kilocycles or Transatlantic jets overhead monitoring 121.5 megacycles, daily skeds on 20 metres etc. back then, eh?

So the recent allegation that Chinese adventurers had journeyed around the world including visiting the Caribbean area, in the early 1400s, while maybe interesting didn't elicit much excitement here in view of the above history!

Terry.

A few miles from where, more recently, in December 1901, Marconi received the first transatlantic wireless telegraph signal at St. John's Newfoundland from Cornwall England.

Does anyone have a schematic for this 2m FM rig. Alinco was no help, emailed them a year ago and nothing.

All of a sudden this one gets very insensitive on receive. It's intermittant, appears to be maybe a thermal problem, not mechanical. Receiver goes from full scale receive of a local station or repeater signal to no bars and barely above the noise floor. Example a local 3 miles away hits full scale on 3 watts, when the recieve drops out he has to crank it up to 100 watts before I can hear him and then it's only 2 bars.

It's not antenna related, different feed lines, different antennas, SWR bridge in line at all times no change at all in output signal. Problem is somewhere in the front end. Any ideas?

It's been many years since I had my old Yaesu FT-101, but as I remember the output from a properly tuned transmitter was about 100 watts CW. As far as a source of replacement 6JS-6 tubes, I'm afraid I don't have any good answer for you. I'm sure that within a few days this thread will be full of useful replies from others who know far more that I do... I'm pretty sure though, that once the new tubes are in you'll have to go through and neutralize the final section in the power amp section. The best I can say is good luck and I'm sure that when you get your Yaesu on the air you'll love it - it's a great radio!

73,
RaOuL

I am looking for information on a recent SK. His calll was W6DSX. I am trying to find out when he was licensed and when he listed his QTH as Ridgecrest Dr. in Paradise, Ca. If you can help me in any way I would be most greatful.

Any listing with any address and the date would also help a great deal. This ham was my mentor. I lost tract of him and than discovered he was a SK and I am writing a ahort paper and ned the info...
tnx and 73

do a yahoo search for 6js6a, and ask the responses if they still have matched pairs, some do, around75$.
Also, they turn up on ebay from time to time.
There is also a website dedicated to the ft101and siblings. Do you need the 160 meter crystal?, I bought one for mine, and got an extra.

OK, I'm wondering if there is anayone who can give me good advice on installing my Alinco DR-112 2m mobile in my vehicle. I have to admit that this is my 1st mobile installation and that I want to make sure that I can do it right and safely, for both my radio and my vehicle. Any suggestions would be appreciated! Thanks!

John,

You can hook the power lines directly to your battery; ie, red wire to the
positive terminal and the black line to a good 'body' ground of your car.
Use an 'inline' fuse to protect your radio as a precaution. You can use
velcro to place it in your car "maybe" and that makes for easy removal when
you want to take it out.

If you are going to be using the 2mtr mobile in more than one car; you, can
use a cigarette lighter adapter to power the radio.

Tom

It is usually bad advice to use a cigarett lighter plug for most of the ham radios. They can draw more current on the high power setting than the plug is rated for . Best bet is to use some plugs rated to handle the full current. Also due to the small wiring used in the cars it is usually best to go to the battery with the 30 watt and up rigs.

I like to go to the battery with a heavy (atleast # 12 wire) for the plus. Usually put in a relay that is rated for the current and have the coil activate off something that comes on with the switch. Be sure to put a lorge fuse as near the battery as you can. Then ground the negative wire to the metel of the car. If you do run a wire to the battery for the negative lead then put a fuse in that line also. While it is almost unheard of , it for some reason you do loose the negative lead of the battery to the chassie then it will protect the radio. If you hook the negative radio lead directly to the frame you do not have to fuse this lead or worry about it.

I've had bad experience with Velcro and 2m units in vehicles - both the regular Velcro and the beefed-up "Industrial grade" Velcro. They're fine in the winter, but the glue tends to get softened with the summer hear in a vehicle, causing the rig to fall off its mooring under the dash or wherever.

Amateur Radio Newsline™ Report 1284 - March 22 2002

Amateur Radio Newsline report number 1284 with a release date of Friday, March 22nd, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio and the FCC join forced to find a wayward transmitter jamming a fire department radio. This story is first on Amateur Radio Newsline report number 1284 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS ASSIST IN TRACKING DOWN WAYWARD TRANSMITTER

Ham radio operators teamed up with the FCC to track down a wayward transmitter. One that was making communications very difficult for the Fallbrook California fire department. It took place the weekend of March 10th. Amateur Radio Newsline's Norm Seeley, KI7UP, has the rest of the story:

--

Milt Davies, KD6UBA, is Division Chief of the North County Fire Protection District. He was the first to identify the problem as radio frequency interference.

Davis described the annoying signal as being an unmodulated carrier pock-marked with strange data-like bursts. Sometimes the jamming transmitter was on-the-air all the time. Sometimes it was on and off. And at still other times the signal almost disappeared - transmitting only a few seconds in a 10 or 20 minute span.

Davies recognized the problem as on-channel jamming. He also knew that he needed outside help. That's when the FCC and the local ham radio community were notified.

First to try was the FCC. As you know, the agency has a series of permanent direction finding stations on the West Coast. These can be operated by remote control from Washington, D.C..

The FCC's weekend duty officer attempted to pinpoint the source of the interference using them, but with only partial success. Some of the locations were down for servicing. The result was a single line-of-bearing. This meant that the interfering transmitter could be anywhere along a 45 mile path.

To help home-in on the transmitter's location, members of the Palomar Amateur Radio Club were called out. They were asked to listen to the fire dispatch frequency and give signal strength reports on the unmodulated carrier. These reports, coupled with the FCC's own line-of-bearing, pointed to the City of Vista, or vicinity.

Now the hunt again became the domain of the FCC. Bill Zears, the District Director in charge of the FCC's San Diego Field Office, arrived with a sophisticated direction finding vehicle. Zears drove to Fallbrook for his first good bearing. That sent him off toward the rugged eastern portion of Vista.

At about the same time, a fire broke out in the Camp Pendleton military complex which borders Fallbrook. The jamming signal was preventing firefighters working the Pendleton fire from communicating directly with their Dispatch Center.

Zears stayed on the job as Sunday afternoon turned into evening. Finally, enough direction finding bearings were available to pinpoint the wayward transmitter to a 30' tower atop a hill in east Vista.

The Vista Fire Department was called. The Battalion Chief on duty offered immediate help. It turns out that a local ham had brought him up-to-speed on the interference case earlier in the day.

Then another ham recalled that the City of Vista once had a transmitter up on the suspect peak. That old VHF transmitter dated back to the days before most communications had moved to the 800 MHz band. He also knew that the old box just happened to be tuned to Fallbrook's current VHF dispatch frequency - because that was Vista Fire's old frequency!

The crew lost no time in getting up the hill and confirming the location of the offending transmitter. Nobody knows why power was still connected. Probably an oversight by some long forgotten radio installer. None the less, it caused the Vista's Fire Department to unintentionally jam Fallbrook, but pulling the power plug made the interference go away.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Thanks to the cooperation of everyone involved and the tenacity of FCC District Director Bill Zears, the situation had a happy ending. (W6VR)

**

OLYMPICS FOLLOW-UP: HANDI-HAM CARRIES OLYMPIC FLAME

The 2002 Winter Olympics may be over, but now comes word that a visually impaired ham radio operator was among those who had the honor of carrying the Olympic Torch.

Kitty Hevener, WB8TDA, and her trusty guide dog SunStar, carried the Olympic Flame on Saturday January 19th. This, as it made its way to Salt Lake City Uath. Kitty’s segment took the flame up to the gates of Fort Point, in the shadow of San Francisco California’s Golden Gate Bridge.

According to the Handi Hams, Kitty Hevener, WB8TDA, is active with that group as well. Handi Hams says that she is a regular volunteer at the annual California Radio Camp held at Camp Joan Mier in Malibu California every March.

You can see photos of WB8TDA carrying the Olympic Torch at www.graystuff.com/gallery/kitty. (HandiHams)

**

ECONOMICS: JAPANS ECONOMIC RECESSION MAY AFFECT RADIO PRICES

The price of ham radio gear and other goods manufactured in Japan may soon change, but its unclear if it will be up or down. This on word that Japan’s economy has fallen into the worst recession in at least two decades. The last time the Japanese economy contracted for three quarters straight was in 1993, when it shrank at around 0.1 percent each quarter. Before that, Japan had never seen even two back-to-back quarters of contraction - the usual definition of a recession - since the government began keeping such records in 1980. (ARNewsline(tm) from published news reports and ARNewsline(tm)interviews.)

**

EMERGING TECHNOLOGY: WSJT TAKING ON THE WORLD

Meantime, a new mode of operation seems to be taking Amateur Radio by storm. We have reported on it before: WSJT. And it lets everyone get in on what used to be the esoteric operation called meteor scatter. Q-News Graham Kemp, VK4BB, looks at the way WSJT is taking on the world:

--

WSJT is a digital mode, designed specifically for meteor scatter communications. It stands for Weak Signal communications by Joe Taylor K1JT. Its advantage for is that it sends extremely fast in a standard SSB bandwidth at 147 characters per second or about 1700 words per minute. By virtue of this speed it is possible to send two call signs and a signal report in a tenth of a second meteor ping.

The equipment to make WSJT contacts is fairly modest. A two meter SSB transceiver and a computer -- a Pentium, at least 75 MHz is the main hardware required. Then you need a simple PSK-31 interface box, as described in March 2000 AR magazine and some WSJT software.

An RF power output of 50 is the practical minimum, with 100 watts providing a worthwhile improvement. A major advantage with WSJT is the small antenna system required. A five element Yagi will do as well as a 10 element Yagi.

From Q-News Australia, I’m Graham Kemp, VK4BB for the Amateur Radio Newsline.

--

More information and the necessary software is at the official WSJT website. Its in cyberspace at pulsar.princeton.edu/~joe/K1JT. (Q-News)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the CARES repeater on 146.73 MHz and serving Gulfport Mississippi.

(5 sec pause here)

**

ENFORCEMENT: THAT CHARGE SHOULD NEVER HAVE BEEN FILED

The FCC has told a Midway, Tennessee ham that his complaint about a club repeater has no basis in fact:

--

Hollingsworth: “We dismissed a complaint filed by Jeffrey Bible, K4MFD, of Midway Teneseee. His complaint was against the Andrew Johnson Radio Club repeater W4WC which is located on an adjacent tower.”

“We found that despite allegations, the W4WC repeater had not lost coordination just because of a move. The move was within the coordinators limits. In fact, the repeaters have been operating for years with no problems.”

--

That was the FCC’s Riley Hollingsworth, K4ZDH who also says that both parties are coordinated, so both will have to work together to solve any interference that might arise. (FCC, RAIN)

**

ENFORCEMENT: FCC REFUSES TO INTERVENE IN ATV REPEATER DISPUTE

The FCC has also declined to intervene in a dispute involving two Mid-West Amateur Television repeaters. One owned by a major radio club and the other by an individual. The main reason. There is no coordination for ATV in the area. The FCC's Riley Hollingsworth explains:

--

Hollingsworth: We notified Adrian Oaks, KB8GRJ, of Xenia Ohio that we would not get involved in a dispute that he has with the Dayton amateur Radio Association over the operation of an ATV repeater. Dayton's repeater, W8BI, has started occasionally operating on frequencies registered to Oaks. I emphasize registered nor coordinated. There is no coordination program there for ATV repeaters. But there's no showing of actual interference."

"DARA uses it for 20 to 45 minutes a week. It makes the repeater codes available to all so that anyone receiving interference can shut off the repeater. It is (also) willing to adjust operating times to accommodate other ATV users."

--

Hollingswoth says that there is no real conflict and therefore the situation does not warrant any FCC enforcement action. (FCC, RAIN)

**

ENFORCEMENT: PRE OPERATION LEADS TO LICENSE SETASIDE

The FCC has told a newly licensed ham that his license grant has been set aside. In a letter to John A Green, KG4RFI, of Mobile Alabama, the commission says that it has information which indicates that he operated on the W4IAX repeater and was also heard at various times on repeaters on 146.685 and 147.090 MHz in the Baldwin County area. The FCC says that all of these transmissions were made during a time that Green did not hold am Amateur service license.

Green was given twenty days from the date of the FCC letter to him to write back and explain certain issues. This includes any instances between the cancellation of his General Class license on September 14, 2001 and the grant of his Technician Class license on January 24, 2002 in which he operated any Amateur Radio transmitting equipment. (FCC)

**

BAMES IN THE NEWS: KD7DDG LOOSES AZ MAYORAL RACE

A follow-up to the story of Tim Weaver, KD7DDG, who was running for the office of Mayor of Glendale Arizona. Well, the votes have been counted and Weaver was not successful in his bid to oust the eight year incumbent Mayor who had the backing of the firefighters union.

The count showed that Weaver had polled only about 24% of the votes needed. Weaver says that the results were disappointing, but respectable for someone outspent and out-volunteered. (RAIN)

**

NAMES IN THE NEWS: RAIN CONTINUES CLEGG RETROSPECTIVE

Hap Holly, KC9RP tells ius that this weeks RAIN Report is part two of a retrospective look at famed ham radio pioneer Edward T. Clegg, W8LOY. This as seen through the eyes of his son-in-law Rob Mc Guffie, K2HZN. Its on line right now in digital streaming audio at www.rainreport.com or analog telephone audio at 827-847-7246. (RAIN)

**

NAMES IN THE NEWS: N9RLA FIRST CENTRAL DIVISION ROVER CERTIFICATE

Some names in the news. First is Dan Evans, N9RLA, who has taken first place as a rover station in the ARRL Central Division. This in the June 2001 VHF contest. Dan is from Scottsburg Indiana. (VHF Reflector)

**

NAMES IN THE NEWS: K8JAC NAMED KANAWHA HAM OF THE YEAR

Also, congratulations to Amateur Radio Newsline’s own Jeff Clark, K8JAC. This, after being named Kanawha Valley Amateur Radio Operator of the Year 2002.

A ham since 1981, Clark’s Amateur Radio volunteer activities include the post of Emergency Coordinator of Kanawha County, West Virginia. He is also Publicity Director of the Kanawha Amateur Radio Club, editor of the clubs newsletter and technical coordinator of the W8GK repeater. But thats not all. The local ARES group, which Clark coordinates receives high marks from county officials and is often called on to provide communications during civic events and emergencies.

Clark received his award on Saturday, March 16th at Charleston Hamfest. Another Amateur Radio Newsline anchor, Jim Damron, N8TMW, had the honor of making the presentation to K8JAC. (ARNewsline(tm))

**

NAMES IN THE NEWS: WA6ITF TO SPEAK IN JOPLIN MO

Amateur Radio Newsline producer Bill Pasternak, WA6ITF, will be the featured banquet speaker on Saturday April 13th at the Joplin Hamfest. The venue is the John Q. Hammon Trade Center in Joplin Missouri.

Situated about halfway between Tulsa Oklahoma and Kansas City, the Joplin Hamfest is a 200+ table event. It also features spacious parking with easy access, wide aisles, forums, ham radio testing and prizes.

Interested? More information is on the web at www.joplin-arc.org.
(ARNewsline(tm))

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

ANNIVERSARY: HAPPY 20TH ANNIVERSARY HEIL SOUND

This week marks the 20th anniversary of a very special company. We are talking about Heil Sound Limited. And when you talk about Heil Sound, you are really talking about its founder Bob Heil, K9EID.

Over the years, Bob Heil has been an audio consultant, an inventor, a musician and lots more. Looking back, He says that everything harkens back to his first love. His hobby. Amateur Radio:

--

Heil: “It’s been an incredible ride from a little kid playing pipe organ in the Fox (theater)n through playing with my Harvey-Wells and SX-99 which I still have, and understanding what it took to make all of these things.

“Then I started building different transmitters and then started building sound equipment.”

“We actually changed the world. We are the guys that figured out how you stack and hang speakers. Why? Because I could set up a Rohn 25G (tower) and hang speakers higher than anybody else because of my ham radio.”

--

After years of touring with such number one acts as the Eagles, Bob decided to give something back to the hobby that had lead to his success. Thats how Heil Sound Limited was born.

--
Heil: My life has evolved around 45 years of being K9EID, and I will always be so grateful to everybody in this hobby for allowing me to do my thing and along the way to help someone. Thats the bottom line that we are able to help somebody and it makes me real happy to be able to do that.”
--

Bob is now celebrating the beginning of the company's third decade with a number of new and innovative products for every aspect of ham radio voice operations. You will get to see all of them in a few weeks and meet Bob in person at Hamvention 2002. (ARNewsline(tm))

**

HANDI HAMS: E-NEWSLETTER MAILING CHANGE

The Handi Hams says that it is changing the way in which the groups weekly e-letter is being distributed in HTML format. According to Handi Hams Pat Tice, WAZ0TDA, constant barrages of virus threats to Microsoft Outlook makes it risky to continue maintaining the HTML list in Microsoft Outlook. So the group is moving its list to a mailer called Group Mail. This says Tice will be bring with it minimal risk of sending a virus to the group of HTML subscribers. The text subscribers continue to receive the e-letter through Yahoo Groups. (HandiHams)

**

EVENTS: 2002 WEAK SIGNAL BANQUET

Tom Whitted, WA8WZG, reports over the VHF Reflector that tickets are now on sale for the 10th annual Weak Signal Banquet. This year the gathering will again be held in Dayton Ohio on Hamvention weekend. If you are interested in attending, more information is in cyberspace at www.wa8wzg.com. (VHF Reflector)

**

INTERNATIONAL - CANADA: RAC SM ELECTION RESULTS

From our neighbors to the North comes word that Tom Caithness, VE1GT is the interim Section Manager for Canada's Maritime Provences. He was elected for a two-year term, which began March 1st.

Also, Derek Hay, VE4HAY was recently re-elected Section Manager in the Manitoba for a two-year term snd Joe Craig, VO1NA has been re-elected Section Manager for the Newfoundland and Labrador Section for a two-year term. Both take office on July 1st.

All three ran unopposed in their respective Radio Amateurs of Canada sections. This eliminated the need for a balloted election. (RAC)

**

DX

In D-X, the big story is of coarse Ducie Island. The VP6DI team came on the air on March 17th and its was bedlam. Take a listen.

--

audio here
--

Ducie Island is a small, uninhabited atoll in the South Pacific and is part of the Pitcarin Island chain. It is also among the rarest DXCC entities in the world as proven by the recording you just heard. It was made in Australia by VK4DX using a Kenwood TS-570D transceiver and posted to his contest website. (Audio courtesy VK4DX)

**

THAT FINAL ITEM: ARDF CHAMPIONSHIPS IN ATLANTA

And finally this week, the calendar says that its spring and hams around the country are turning to outdoor activities such as new antennas and hidden transmitter hunting. Here's your chance to prove you're the best at the latter activity, as Newsline's Joe Moell K0OV explains:

--

The biggest annual event in on-foot hidden transmitter hunting is early this year, so time is getting short if you want to take part.

The Second USA ARDF Championships will be April 19-21 at Franklin Roosevelt State Park near Pine Mountain, Georgia. That's about 70 miles southwest of the Atlanta airport. No matter what your level of skill or experience at radio-orienteering, you'll be welcome. Experts will be vying for positions on Team USA as it travels to Slovakia for the World Championships later this year. Beginners will be picking up the best RDF techniques from these experts, and learning how to put on similar events in their home towns.

The official deadline to register for the national championships is April 6, but Georgia Orienteering Club urges you to let them know you're coming by March 29, so they can plan food for the picnic supper on Friday and the spaghetti dinner on Saturday.

Learn more about what it's like to be in the ARDF Championships by reading about last year's event in the March issue of QST, and in December and January's issues of 73 Magazine. There's lots more on the subject at my Web site -- www.homingin.com -- plus a link to the registration site for the Pine Mountain events. That's homingin -- one word -- homingin.com

From sunny southern California, where we're soon having our third practice session of the year to get ready for the championships, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, that website is www.homingin.com (K0OV)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Thanks for the advice! I will take this into account when I permanently
wire the rig into the car.

i have had similar exp to paul with velcro in vehicles....would
recommend some other method of securing the device, unless it is resting
on the floor and you just need to hold it in place. best of luck! john

Fine folks,

I am looking for a mod for a Kenwood TS-440...
xmit audio monitor... not cw sidetone, already have

```
that built into the rig.  This is for SSB work.  I saw
a mod on the net being advertised by someone not
too long ago and now I am interested in getting it.

It would really help when working with headphones
or to monitor my own xmit audio quality to be sure
I am not overdriving or that audio level is good, etc...

Does anyone know where to find this kit or a mod
for sale as a kit or otherwise?

Thanks in advance for your help
George Perkins

Hello,

Does anybody have any information on the change to the propagation of radio (100kHz - 2MHz) at night. I am particularly interested in how much further radio signals can travel at night due to changes in the ionosphere. I have information on the physics behind the ionosphere, but no real numbers for the distances involved.

Thanks in advance for any help or advice

Nic

<snip top post>
>

That's daft it's been FCC type approved

Under US freedom of information act, new radios submitted for type approval
are public information on the FCC website / database
That's how to keep abreast of new radios,

watch the FCC type approval site

Although of course that doesn't mean Yaesu will put into production
Just they now can, for use in the US

With the Kenwood TH-F6/7 selling like hotcakes,
Yaesu will have to bring out something new to replace the VX5

waters and standon are now selling the TH-F7 for 249quid

Steve Terry

I try to make it a point to purchase a car without a center console, ie one with the shifting located on the steering wheel. Then I mount my rig directly to the ashtray. At the present both I and my wife have 1999 Chevy Lumina's and it's just a matter of swapping the ash trays and I have my rig in either car, as needed. Moving the

magmount is no problem. Power wiring stays in both cars and in
plugable.

My real e-mail address is in the PGP signature.

I think Yaesu might be trying to avoid the same situation that Icom went
through last year with their T-82A. Remember, it was all hyped up, but was
pulled from production at the last minute due to issues with the wideband FM
recieve. Just my 2kHz worth.

I got a note from the guys at Gigaparts. They say that it will be available the end of May or first part of June. BUT they do not have pricing info yet.

for what its worth

Dan

The distances involved at night are much greater. Just listening to stations on the AM-BC band during the day, and then at night will give you a good idea. Those frequencies use a mix of surface wave and sky wave at night. The surface wave is attenuated less at the lower frequencies. The sky wave is more useful on the higher of those frequencies. Even on the AM-BC band , it's common to hear stations 100's of miles way. Even 1000's of miles at times. During the day, you might be able to hear a 50 KW AM station 250-300 miles away. Depends on the radio, antenna, etc. At 100 khz the surface wave loss is appx 90 db at 1000 miles. At 2000 khz the surface wave loss is appx 150-160 db at 1000 miles.
It's common to work the other side of the world on 160m at night "if" you have the antennas, etc for the job. "1.8-2.0 mhz" On the longwave band, a few 100 miles is common. Listen to the aircraft beacons. They will give you a good idea for that band. Of course, you will have to decode slow morse to ID the beacon, but it's usually only 2 or 3 letters. Anyway, the higher the freq, the more pronounced the sky wave at night. Best way to tell is get a radio and listen for a while. Keep a log of all the stations you hear, and after a while you will get a good idea of the normal distances involved. MK

Hi Mark,

I'm a 6m repeater keeper, GB3WX, in the UK.

We have tried various "White-stick" antennas, as we call them, and although quoting significant gains, the polar diagrams left much to be desired, in terms of lobes and angle to the horizontal. Gain is not everything.

What about the Cushcraft AR6 or ARX6

The AR6 is just a halfwave base fed, and the ARX6 is 2 x halfwave, although I'm a bit concerned about the quoted gain. My perceptions is that it's just a pair of "close-spaced" halfwaves in phase, and therefore the max gain will be about 1.9 dBD at best.

We have been using an AR6, for over a year now, it has withstood gales with gusts to 80+ mph and everyone in the group indicated that they were getting a stronger signal from the repeater, when we replaced the original "white-stick" with the simple half wave.

Hopefully, this will be of some use to you.

Cheers
Dave, G3ZXX.

The AR-6 is a well-built, sturdy antenna. The problem in using it for a repeater is that it has uptilt rather than downtilt.

I would like to start an rf test equipment operation course training. From reading online forums, I know many others are interested in this type of training. However, getting people together to organize this is a challenge. Also, the cost of the equipment is expensive

Very few colleges offer rf courses and it is hard to get the courses. Also, you have to wait a whole school term if you miss this current class. Even when a class is offered, it does not have the training with useful content. The topice is presented academically and it is hard to put this knowledge to use. Some private training companies DO offer this training. However, they offer "short courses" for 2-5 days. Also, they charge something like $1500 per week, and not all of this is lab time. I believe, if I got some people together, the course can be done less expensively, and there would be more lab time and more training in this area.

I am in the MA/ Southern NH area. Anyone in this area interested in such training? I would like the format to be a combination of equipment usage and technical discussions. Do not hesitate to contact me if you are interested in rf test equipment operation. My email address is vshah101@aol.com. If you have some suggestions or comments, please reply in this forum.

Also, I am interested in getting people together and sharing their design project experience. This a good way to learn more about rf.

I haven't tried one of those, but is probably a decent antenna.

Another good thing about the AR-6 is it's quite adjustable for the
freq used.
They also make a 10m version. "AR-10". These are easily homebrewed
also. I've made a few of them for 10m. I use a single turn loop at the
base the same way cushcraft does. The cap made from coax. You can also
improve the low angle performance a bit by adding a decoupling section
below the antenna to reduce the feedline radiation. I used a 1/4 wave

section of coax below the feed to a set of 1/4 wave radials mounted and grounded to the mast a 1/4 wave below the feedpoint. I tried this on a 10m version and it did seem to clean it up a tad. But they work fairly well out of the box with no decoupling. MK

Check out this item for auction.

ONE NEW, ANTENEX brand, Phantom model, 3db gain, 450-470 MHz, "Transit" style, UHF Antenna. Antenex part number TRA4503. It is NEW in the bag. This antenna mounts to a standard MOTOROLA style mount (NOT INCLUDED IN THIS AUCTION). I have been using this style antenna for my personal equipment and I am very happy with the results. Great for low-profile or unmarked vehicles!

All,

I picked up a copy of Gordon Wests' 3rd edition 'Technician/ No-Code Plus' study book (elements 2 and 3A, effective 7-1-97 thru 6-30-01), and I've got a question about the formula for near-field distance (N0A06). The formula is:

R(nf)=(D^2)/4(wavelength in meters) ....{damn, I hope that makes sense}, where D=diameter in meters of the antenna.

What exactly is being refered to by 'diameter' of the antenna? If I'm using a base-loaded whip, is it the diameter of the steel whip? Or if I'm using a Yagi, is it the length of the directional beam (for lack of proper nomenclature)?

Any insight will be appreciated. I can learn the test as well as the next, but I'd like to understand what I'm doing!

TIA,

Anthony

I am working on a sport rocket carrying a video camera and transmitter as the payload. The transmitter I am considering is the VideoLynx 434 Micro ATV Transmitter. I know you have to have at least a technician class license to transmit at this frequency, but I read somewhere that the transmission has to be to at least on OTHER operator.

I know very little about amatuer radio and have only become interested because this frequency transmitter offers the best performance for my intended application.

Since I am using the transmitter to relay video data from the rocket essentially to myself, will I be breaking any FCC rules since it's not intended for any other amatuer operator?

Power output will be 50-100mW (per specs of transmitter).

Any help is appreciated.

i live in central new york city (manhattan) and like to record off
local fm stations, particularly small and college stations. trouble is
i rarely get a clean signal. it seems to depend mostly on the weather,
even for stations only 1=2 miles away. i have relatively low=end
components, including a $75 Terk powered antenna. i wonder if better
equipment would help. or could it be the jumble of wires connecting
everything is creating interference? i would appreciate any
suggestions. milt

Thanks for the reply. Since I originally posted that message, I picked one up
and will have it set up for packet by the end of April.

Amateur Radio Newsline™ Report 1282 – March 8, 2002

Amateur Radio Newsline report number 1282 with a release date of
Friday, March 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The Dayton Hamvention announces the EMMY AND OSCARS of Amateur Radio. We have the winners on Amateur Radio Newsline report number 1282 coming your war right now.

(Billboard Cart Here)

**

HAMVENTION 2002: AWARD WINNERS NAMED

The Dayton Hamvention has named Radio Amateur Information Network founder Alanson “Hap” Holly, KC9RP, as its 2002 Radio Amateur of the Year. Holly received the news of his selection on Thursday evening February 28th in a phone call from Cathi Hoskins, N8ZCQ, who chairs the Hamvention Awards and Banquet Committee. KC9RP tells Amateur Radio Newsline that he was completely taken by surprise:

--
Holly KC9RP: “I was absolutely stunned! In fact, all I could say was me? I mean seriously, I was just absolutely floored.”
--

Holly, lives in Des Plaines Illinois has been licensed since 1965. He began his ham radio informational programming career in 1984 on a local Chicago Area repeater. This eventually lead him to become founder, moderator and guiding light of a weekly amateur radio audio feature magazine known as the RAIN Report.

--
Sample audio from Rain Report.
--

RAIN programming is distributed to hundreds of repeaters across the country via a telephone dial-up line, the rainreport.com website, by a subscription tape service and broadcast over W-A-Zero-R-C-R's weekly 160 meter informational net.

But that’s is only a small part of the Hap Holly story. Originally licensed in Escondido California at age 14, Holly who has been blind since age 7 served as a phone-patch station and net control for the famed WESTCARS traffic net until 1970. He then headed off to Principia College in Illinois and from 1970 to graduation in 1974, ran phone patches and kept radio schedules for many of his fellow students.

Holly graduated Principia with a Bachelor of Arts degree in Sociology, and soon found himself in the Chicago area. There, he sought out world-class jazz accordionist Leon Sash, to pursue further training in music. As a professional keyboard player, Holly’s diverse repertoire of American music of the past six decades has made him a popular choice in the Chicago area.

Hap met his wife-to-be while he was teaching a class in non-visual perception to high school students at a summer camp in Buena Vista, Colorado. The two were married in August of 1976. Stephanie, who is sighted, received her ham ticket and KA9WKD callsign in 1986.

Over the years, Hap Holly has written articles for the Spec-Com Journal, Radio Scan Magazine and occasionally reports for us here on the Amateur Radio Newsline. Holly is also a common sight at the Dayton Hamvention, taping forums which are then incorporated throughout the year into his RAIN Reports. And since 1975 KC9RP has been an honored member of the Des Plaines Lions Club. He has also been a member of the Des Plaines Toastmasters since 1976. He and Stephanie are also active with Des Plaines Illinois Emergency Medical Alert system.

Named as this years Hamvention Technical Excellence award winner is Alan Waller, K3TKJ, of Laurel, Delaware. Waller was chosen for his work that lead to the interfacing the Internet to Amateur Radio.

First licensed in 1961, Waller combined his decades-long love for Amateur Radio and a burgeoning interest in the then-new Internet to design and manage the www.qsl.net and www.qth.net web sites. That was back in 1993. Since that time, Alan Waller's web sites have come to serve the needs of tens of thousands of ham radio operators worldwide by providing a vast technical reference platform, an electronic mail service, web page hosting services, and links to thousands of other ham radio related sites. And in the true spirit of the Amateur Radio, Waller's initial work utilized leading edge experimentation to see what could be done with the technology then available. This has developed into a mature, reliable service to the world wide ham radio community.

Rounding out this seasons winners are a pair of pair of space exploring hams who have been named as co-recipients of the 2002 Hamvention Special Achievement Award. Former astronauts Owen Garriott, W5LFL, and Tony England, W0ORE, are being honored for paving the way for manned ham radio operations from the space shuttles that has made ham radio a permanent part of mans exploration of space.

Owen Gariott, W5LFL was first. On November 28, 1983, Garriott, was launched into space aboard the space ship Columbia for the STS-9 mission. It was the Spacelab 1 mission and Garriott brought along the first Amateur Radio station on a crew-tended space vehicle. It was a simple Motorola hand held transceiver connected to a special antenna designed to fit in the Space Shuttle’s window.

Three days later, W5LFL came on the air and hams across the United States and around the world were witness to a historic radio transmission:

--
Owen Garriott W5LFL: “This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles passing over the U.S. West Coast and calling CQ.”
--

Among those who heard Owen Garriott's Amateur Radio transmissions from space was Lance Collister, WA1JXN of Frenchtown Montana. Collister, who is now W7GJ, is credited with being the first amateur to work an astronaut in orbit. Take a listen:

--
Lance Collister WA1JXN/W7GJ: “W5LFL on Columbia, WA1JXN, W-A-1-Japan - Xray-Norway, WA1JXN Frenchtown Montana standing by.”

Owen Garriott, W5LFL: “Hello W1JXN, WA1JXN, WA1-Juliet-Xray-November. This is W5LFL. You’re our first contact from orbit. WA1JXN, how do you read? Over?”
--

The success of Garriott’s mission lead to the development of SAREX -- The

Shuttle Amateur Radio Experiment. And, over the years, SAREX permitted youngsters in classrooms around the world to speak directly with astronauts in space. But for this to happen, the technology of manned ham radio operations from space had to be enhanced. This aspect of the then new SAREX program fell to the next ham radio operator orbited: Tony England, W0ORE.

W0ORE flew into space on the shuttle Challenger in 1985. It was Mission 51F, Spscelab 2. In addition to the 2 meter FM voice gear, Tony England also had with him the first ever ham television station to go into space. Slow Scan yes, but capable of sending back high resolution images which hams on the ground equipped with SSTV gear could view live or record on a simple audio cassette for later viewing and historical archiving. From space, Tony England described the station he was using:

--

Tony England, W0ORE: "Essentially we've got a commercial TV camera that anyone could go out to their local radio store ant buy. We feed this into a scan converter built by a commercial outfit and modified by NASA Amateur Radio clubs and this takes a snapshot of the scene and digitizes it and put it in a memory.

Then its sent to a handie-talkie like this. From there we will send it over a wire up to the upper window upstairs and to this antenna when I get it up there in the window. Then it will be transmitted to the ground.

When we get going, we will be able to send color TV images of what we are doing on board as a series of snapshots updated every 10 or 20 seconds. Amateurs anywhere on the ground will be able to receive them, and ones with scan converters will see the pictures."

--

That flight also marked another first. The first ever two way television -- ham radio television -- to and from space.

Tony England went on to flight prove both the improved FM voice and then new SSTV systems. The SSTV was so successful that NASA gave very serious consideration to a permanent installation on all shuttles for back up communications. More important, the early on-orbit operations by Own Garriott W5LFL and Tony England W0ORE made possible the thousands of educational contacts between children in school classrooms and the crews flying in space. First, on board the shuttles, and now as a permanent part of the International Space Station.

Hap Holly KC9RP, Alan Waller K3TKJ, Owen Garriott W5LFL and Tony England W0ORE will receive their honors at the Hamvention Awards Banquet slated for Saturday evening, May 18th at the Nutter Center in Dayton Ohio. Amateur Radio Newsline will be there to bring you this story and all the news about Hamvention 2002. (ARNewsline™ from Dayton Hamvention® news release. Some audio from "Amateur Radio's Newest Frontier" and "SAREX - The Shuttle Amateur Radio Experiment" video presentations)

RADIO RULES: FCC RESUMES VANITY PROCESSING

Vanity license processing is getting back on tract. According to a Legaue bulletin the FCC now has all outstanding vanity applications filed last October in hand and is ready to resume routine vanity processing. Until recently a single missing vanity application had been holding up a backlog of more than 2000 vanity applications. The FCC credits the ARRL in part with helping to locate applicants and resolving the problem. (ARRL, FCC)

**

RESCUE RADIO: AMATEUR RADIO EMERGENCY COMMS SUMMIT

The first ever Amateur Radio Emergency Communications summit was held in Indianapolis last week. Amateur News Weekly’s Jack Parker, W8ISH, reports on the success of this first meeting.

--

They came from the Red Cross, Salvation Army, ARES, RACES and even CB-radio’s REACT team. Two dozen representatives of different Amateur Radio emergency communications groups met in a Federal Building training room to find ways of helping local and state emergency management organizations. The summit was organized by Marion County ARES director Mike Palmer, N9FEB.   Palmer cited a need to develop better communications and cooperation between the different groups.

Many amateurs wear two or three different hats when it comes to providing public service. Palmer wants to identify those who are willing to help and to better utilize the voice and data communications available in the Marion County Amateur Radio Community. Many of the summit participants agreed this type of effort is long overdue.

Members of Army-Navy and Air Force Mars, as well as the Indiana Wing of the Civil Air Patrol offered their services during times of disaster. Everyone agreed this was a good start and look forward to future efforts to better train and organize Amateur Radio Emergency Communications in Marion County and Central Indiana.

Reporting from Indianapolis for Amateur News Weekly, this is Jack Parker W8ISH.

--

According to Jack, everyone came away from the meeting knowing that cooperation between groups is a key element in providing better service to the public. (ANW)

**

RADIO RULES: FCC ADOPTS AMBER EAS EVENT CODE FOR CHILD ABDUCTION CASES

The Federal Communications Commission has announced the adoption of a Report and Order amending the Emergency Alert System rules. Included are several new EAS event and location codes, which broadcast stations and cable systems may use to alert the public in the event of state and local emergencies. Of these, a new Child Abduction Emergency event code may be the most interesting to hams involved in Search and Rescue and who have E-A-S decoders installed in their repeaters.

The plan is described as a voluntary partnership between law enforcement agencies and the media that will be used to alert the public of serious child abduction cases where police believe that the child is in danger of bodily harm or death. Under the plan, radio and television stations will be permitted but not required to interrupt programming to disseminate information concerning serious child abductions when the new Child Abduction Emergency code is received. It could also be used by hams as an automated call to action to help find a missing child if used to activate an E-A-S equipped Amateur Service repeater.

Police departments say that every minute counts in dealing with an abducted child situation. In adding the Child Abduction Emergency code the FCC says that its responding to public concerns. (FCC)

**

ENFORCEMENT: FCC COMPLETES GEORGIA ARRL VEC EXAM SESSION AUDIT

The FCC has wrapped up an investigation into apparent irregularities at five ARRL VEC-sponsored Amateur Radio examination sessions in Georgia during 2000 and 2001. As a result of the probe, FCC Special Counsel Riley Hollingsworth says that several examinees will be called back for partial retesting:

--

Riley Hollingsworth: “We determined reviewing all of the information that was brought to our by the League that eight examinees will have to be retested on the code element. The ARRL has also relieved ten VE’s of their duties as volunteer examiners.”

--

According to the ARRL Letter, all V-E’s who might have been involved were suspended after the FCC investigation began last year. (FCC, RAIN)

**

ENFORCEMENT: A REPEATER OUTSIDE OF THE BAND

The FCC is also looking at the operation of repeater in the Metro New York City area. Again, the FCC's Riley Hollingsworth:

--

Riley Hollingsworth: "We opened an inquiry into allegations that an uncoordinated repeater operated by Thomas Batista, KC2DDD, and Gerardo Arias, N2IFU, in Corona and Staten Island New York. Now that repeater is not only causing interference to a coordinted repeater, but the input is apparently on a frequency not even allocated to the Amateur band. So, needless to say we are real interested in reviewing that response when it comes in.

--

What Hollingsworth will be looking for is an answer to why the machine is using 143.020 MHz as an input frequency as well as why its on the air without coordination. 143.020 MHz is a full 800 Kilohertz below the bottom edge of the 2 meter Amateur band. (FCC, RAIN)

**

CONVENTIONS: SOUTH EAST VHF SOCIETY CONFERENCE

On a far lighter note, the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27th in Oak Ridge, Tennessee. And they too are putting out a call for papers. If you are interested in participating, please contact KG4QDZ by e-mail to kg4qdz@arrl.net. (VHF Reflector)

**

CONVENTIONS: CHARLESTON HAMFEST MARCH 16

And the 18th Annual Charleston Area Hamfest and Computer Show will be held Saturday, March 16, 2002 from 9 AM to 3 PM at the Coonskin Armory in Charleston, West Virginia. Talk-in is on the 145.35 MHz repeater. Admission is $5 and there will be free parking. More information is available by e-mail to n8tmw@arrl.net. (N8TMW)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

HAM RADIO POLITICS: NCI LEADER CALLS FOR ELECTIONS

Bruce Perens, K6BP, the founder and an incumbent director of No Code International says that its time for new directions for the group and has called for elections. Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--

According to Bruce Perins, K6BP, when he started NCI in 1997, he never dreamed that it’s goals would be achieved so quickly. But says Perins; “we are most of the way there.”

Perins notes that last year the International Amateur Radio Union voted to ask for the removal of the international treaty provision requiring Morse Code testing for Radio Amateurs. Now Perins observes that even ARRL has voted in favor of removing code requirements from the international Radio Regulations.

With what he terms as -- no remaining credible opposition to NCI's cause left on the international level -- Perins says that it is time to turn NCI’s focus to domestic policy. He says that for NCI to take an appropriate role in the end-game of the no-code battle means cooperation with national societies like the American Radio Relay League. And to do this, Perrins believes may take some new people.

So Perins has asked that an election for new directors be held no later than April 30th of this year. He also says that any person who was an NCI member on December 31, 2001 can be a candidate for director, and is eligible to vote in the election.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More information about No Code International is on the web at www.nocode.org. (ARNewsline with information from K6BP)

**

HAM RADIO IN SPACE: AO-40 GPS TEST RESULTS PUBLISHED

The February issue of GPS World included an article titled Formation Flying in Space. Authored in-part by AMSAT North America's Frank Bauer, KA3HDO, the essay shows G-P-S results from the receivers that NASA’ Goddard Space Flight Center provided for flight on the AMSAT OSCAR 40 bird. According to Tom Clark, W3IWI, the data shown in the article was downloaded using AO-40's RUDAK system by WD0E and KB0G. (ANS)

**

WRTC-2002: ORGANIZING COMMITTEE ANNOUNCES THE COMPLETE LIST OF OFFICIAL ON-SITE REFEREES

The WRTC 2002 Organizing Committee has named a full list of on-site referees for the upcoming games. The committee says that it received more than 100 highly qualified applications and those chosen were from that group. A full list of referees and other information is available on the web at www.wrtc2002.org (WRTC2002)

**

DX

In D-X, word that Dave Cree, G3TBK, has returned to work in the Caribbean. Throughout March Dave will be active as J88DR from St. Vincent. For the first two weeks of April look for him J3 slash G3TBK from Grenada. Operations will be on all bands, but concentrating on the WARC bands, mostly on C-W, but with some SSB. QSL to Dave's home call either direct or via the RSGB bureau. (RSGB)

The New Zealand Amateur Transmitters Society is warning hams world wide of what they say is a pirate operation. According the NZART News, a maritime mobile station using the callsign ZL2TO and the name Tony has been heard recently operating on nets on 15 Meters. This station currently gives his location as the Cape Verde Islands. Only one problem. The ZL2TO call sign is allocated the Waitara Amateur Radio Club. (NZART)

And the South Africa Radio League news service says that anyone who has held a QSO's with 7Q8 slash ZS6GH or C9 slash ZS6GH should write them off . SARL says that these have been declared null and void because license or authorization to operate was issued by the telecommunications regulators in Malawi or Mozambique. (SARL)

**

THAT FINAL ITEM: NOMINATIONS SOUGHT FOR THE YOUNG HAM OF THE YEAR AWARD

And finally, we started this weeks newscast with a story about awards. Lets end it on a similar note as we here a Amateur Radio Newsline officially open the 2002 nominating season for our own Young Ham of the Year Award.

The Young Ham of the Year award was created in 1986 by amateur Radio Newsline producer Bill Pasternak, WA6ITF, to fill what he viewed as a void where younger members of ham radio society were often overlooked:

--
Bill Pasternak, WA6ITF: “When I was a young ham in the 50’s and 60’s the good deeds of young hams were often overlooked and ignored. When I grew up I was fortunate enough to be in a position to remedy this and thats how the Young Ham of the Year Award program came about. Thats how it came into being”
--

The award as originally envisioned as very low budget. One idea was for a certificate that would be mailed to a ham, age 18 or younger who had shown some exceptional ability or performed some heroic deed that set him or her apart from the crowd. When Bill mentioned the idea to Chip Margelli K7JA, of Vertex Standard back in the company’s days as Yaesu USA, the idea quickly expanded. Margelli offered company support on the spot:

--
Chip Margelli, K7JA: “When Bill Pasternak gave me a call and dsescribed the project to me in the tiniest bit of detail it was obvious that this was a no-brainer and something that we as a company at Yaesu wanted to encourage. So, I jumped at the opportunity to be a major contributor and it has been a great project ever since.”
--

The award now had substance, but it lacked a permanent home. One was found in 1993 when it was invited to the Huntsville Hamfest:

--
Bill Pasternak, WA6ITF: “The way we got to Huntsville? Simple. We advertised. We put a notice into the newscast that we were searching for a permanent home. The answer came in a note from Scotty Neustadter, now W4WW, who is the Huntsville Hamfest Chairman. Scotty basically said bring it to Huntsville. And we did.”
--

While the presentation ceremony did go to Seaside Oregon in 1994, it returned to Huntsville in 1995 where it has been ever since. And in 1996 a second major corporate underwriter came on board. C-Q Magazine. Rich Moseson W2VU, is editor:

--
Rich Moseson, W2VU: “We at CQ have always thought that it is very important to promote Amateur Radio to young people and we saw that co-sponsorship of the award was the way to help do that.
--

What CQ did was to add to the Young Ham of the Year awards chest something very special. A week of fun and excitement at Spacecamp. Today, with corporate sponsorship from Vertex-Standard USA and CQ Magazine, and support from countless others including the ARRL, Dave Bell Associates and Rosewood Communications the Young Ham of the Year Award continues to honor the Amateur Radio related achievements of those hams age 18 or younger. And now its time to find a fitting recipient for 2002.

Full details, rules and a nominating form are available right now on our website at www.arnewsline.org. Just scroll down to the Young Ham of the Year Award area and click to download. Or you can send a self addressed stamped envelope to the 2002 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350 and we will mail back the materials.

The Amateur Radio Newsline Young Ham of the Year Award is a one of a kind. It honors the youth of ham radio and in doing so, we hope it helps to insure a bright future for the hobby and the radio service that all of us love. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, another reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

I've been through a couple of GH62 antennas.
They offer great gain, but are easily destroyed by wind.

I've actually taken and passed general and extra - only thing holding me
back is the cw test which
I will attempt this Friday.

Maybe someone could help me with these answers :).

What is the test really like? How much punctuation does the test use? What is the qso you listen to like? Do they send in Farnsworth style or what? And how long is the audio portion of the test? Say you botch the written part - how hard is the multiple choice part?

Am I being justifiably nervous?

Michael Jantzen ^_^ n7wsb

Hi Mike -- here in San Diego the examiners have a handout sheet --- call yours and see if they have one.
If not here is what to expect in San Diego. Your area should be similar.

==
PASSING THE CODE TEST

NOTE: Following is a typical exam handout sheet used in San Diego. Before you study the code or prepare for a test, call YOUR VEC and get the latest information. You will want to know in what manner to study, note that in the example, code characters are sent at 13 wpm, with the spacing adjusted for overall 5 wpm speed � study accordingly is recommended. The VEC�s in your particular area can be found at URL:
http://www.arrl.org/arrlvec/veclist.html

This is a typical Morse code test as given by our local Volunteer Examiners in San Diego, California. It is presented here as a matter of what to expect when you take the test.

When you put the earphones on and the tape is started, you will hear one minute of practice to help you loosen up. This will also give you the opportunity to make sure the volume is set high enough to allow you to hear the characters being sent. An example of the one-minute practice might be like the following:

V V V The following is one minute of practice at 5 wpm to allow for adjustment of the volume.

Following the one minute of practice, there will be a slight pause followed by text sent by one operator in a typical QSO. What follows is a sample of what you might hear:

V V V WA7VXB/8 de N3YZW BT RRR Thanks Roger for the nice report. Your report is RST 569 ? 569 here in Gambrills, MD. My name is Julles and I work as a Keypunch Operator. My age is 30 and I am married and have 2 children. The rig is a Yaesu 101B putting out 75 watts to a 2 element Quad antenna. I feed the antenna with 50 ohm coaxial cable. The weather here is warm and breezy, temperature is 74 degrees. So how copy? AR
WA7VXB/8 de N3YZW SK

You will note that the sample QSO contains all of the alphabet letters, numbers 1 thru 0, punctuation such as the period, comma, question mark, slant bar, and the prosigns BT, AR, and SK. All of these are required by the FCC to demonstrate your knowledge of the Morse Code. The actual QSO you hear will be approximately five minutes in duration.

Following your listening to the QSO, we will check your copy looking for a string of 25 characters in a row without error. If you have copied 25 characters in a row without error, you pass. If not, you will be provided with an answer sheet with ten questions about the QSO you just copied. If you answer seven (7) or more correctly, you pass. Each letter in the text counts as one (1) character, numbers, punctuation and prosigns count as two. If you have the appropriate number of characters in a row correct, you pass the code test. As you see, you have two chances to pass.

What are the questions like? Following are some examples, along with the correct answer:

What is the callsign of the station being called?   WA7VXB/8

What is the callsign of the calling station?   N3YZW

What is the name of the operator being called?   Roger

What is the name of the calling operator?   Julles

What is the calling operators job? Keypunch Operator

What make and model radio is he using? Yaesu l01B

What kind of antenna is he using? 2 Element Quad

What kind of feedline is he using? 50 Ohm Coaxial Cable

How many children does he have? 2

What is the temperature at his location?   74 Degrees

You will note that there is emphasis on callsigns and numbers, pay close attention to the make and model of the radio being used and the antenna system. Remember which is the calling station and the station being called. Some have had the calls correct, but reversed them on the answer sheet. READ THE QUESTIONS CAREFULLY!

Remember, your first chance at passing is your text. Go back over it carefully, you are going to have some blank spots. Use your best judgment as to what is missing. Remember, state abbreviations will probably be sent as two letters, e.g. CA not CAL or Calif. We will start counting with the first correct character and continue until you miss. We will start again at the next correct character and continue until you miss again. We do this until the end of the text, counting letters as one (1), numbers and punctuation, and prosigns as two (2) characters. If we find enough correct in a string, i.e. 25 you pass.

Suppose your text looked like this before you went back over it to see if you could fill in where you missed a character: "The rig i_, a Ya_su 101B put _g out 75 w___s to a 2 el_m_nt Q __d ant__na."

That line is sixty-six (66) characters long. When you go back over your text, don't you think you could fill in the blanks? If you know rig names and models, types of antennas, feed lines, etc. you should have no problems. Another thing -- penmanship is important, write or print your letters and numbers carefully, so we can read your writing. Block printing is best, but try not to lose out because a cursive "c" looked like an "e". It is not pleasant for us to have you miss out by a single character.

If you have any specific questions, be sure to ask one of the Volunteer Examiners before your Morse Code Receiving Test begins. We wish you the best of luck and look forward to hearing you on the bands. YOUR VOLUNTEER EXAMINER TEAM

Thanks to Harry A. Hodges, W6YOO, ARRL ASM - VE Team Leader

You can't expect instant answers on usenet. It doesn't work that way.
No ones newsfeed acts the same, and many don't even see posts that
others might until a day or two later. What you probably need is a
good FM yagi or log periodic antenna to point to the station you want
to listen to. An active antenna with a built in preamp is usually used
in fringe areas. You really don't need all that gain in NYC. It will
likely cause excess images.  What you need is a good antenna and a
rotor. I assume your radio is usable... An outdoor TV antenna might
even do the trick, although I think radio shack sells some FM only
antennas. MK

Hiya Chaps,

A friend of mine has got a 2m Yaesu FT-23 Handheld.
with Palmate written on the front.
The battery Details - FNB-11 12V 600mAh

if anyone has a working battery, can you please let me know.

73 Matt

On January 28th I agreed to purchase an Alinco DR-M06 , 6 meter
tranceiver
from KB9YTV, Ian Ben Steimle, 1003 LIncoln St, Greebay, Wisconsin 54303.

I sent an Postal Money order Priority mail on Tuesday, January 29th
2002.

I received radio on Friday February 8th...not working

Februay 9th I notified Mr. Steimle and he agreed to refund the $185.00

February 11th I returned radio and he received it February 13th,
promising
overnight refund of $185.00

Several lies later we are without the refund a full month has passed and

emails have ceased from KB9YTV.

I have contacted the FBI Internet Fraud division and the Postal
Inspector...
and will continue to alert the Amateur Radio community...so that nobody
else falls prey to KB9YTV

Tnx & Vy 73,
KA4NNN

Does anyone have a simple definition for "Ground"? I "know" what it is, but
I have a difficult time explaining it. Some people call it a "Return".
Return to what? Every telephone pole is gounded - has, stapled to it a rod
that's driven 6' into the earth and, from the pole (in front of your house,
perhaps) comes the "Ground" for your home's electrical system.

Paul, KC2FNC

update...

This is getting interesting, but not very...
Received an email from KB9YTV stating his bank
has an copy of an money order cashed by me that
he will soon have in his possession.
Totally false...

Regards,
KA4NNN
Presley Travis

Message-ID: <20020316132454.21394.00001977@mb-cv.aol.com>
Xref: archiver1.google.com rec.radio.amateur:3244

I was recently told that there were some Eimac 3-500Z tubes that had bad plate welds and that this would cause the plate structure to start leaning over after a period of use. Does anyone here know how to identify which Eimac 3-500Z's these were? Also, does anyone have expreience with RF Parts brand 3-500Z's? I have always been advised that Chinese tubes should be avoided but on the other hand, I hear pretty good things about these. I have an old SB-220 and I want to get a set of spares for it. I just don't want to get stuck. (If replying directly please reply to   k1rodxyz@arrl.net and remove the "xyz")

Thanks es 73'

Mike,

Don't sweat the code exam. If you studied correctly and learned it you will breeze through it.

Yes it is sent in the Farnsworth method. The charcter spacing is at 5 wpm, the characters are sent approx 13-15 wpm. If you used tapes to study, and they were sent at exactly 5 wpm both charcters and spacings your going to have trouble, because your not used to the sounds of the charcters.

The code practice programs that you can download helped me. I had some old tapes from 73 magazine from the late 70's that used this method. The characters are sent at 13 wpm w/5 wpm spacings. When I used the pc programs I cranked the charcter speed to 18-22 wpm and the spacings at 7 wpm to force myself to learn what it really sounds like on the air.

As for the content of the exam it's not a secret what is on it. The acutal test is about 5 minutes long, you will be listening to a real CW QSO. Your going to hear the call signs of both station, signal reports, weather, station equipment, names, QTH, etc, anything you might hear in a real QSO. Punctuation, it's the 26 letters of the alpahbet, all numbers 0-9, the / (back slash or slant bar), comma, period, question mark, hyphen, and several prosigns such as SK, BT, SN.

The key is over prepare and when you sit down to the listen to the tape or pc, whichever method the VE's use there, you'll think they are sending in slow motion. The hang time between letters will seem like for ever, but you will be more confident and pass with flying colors.

WHAT EVER YOU DO LEARN TO RECIEVE BEFORE YOU EVERY TOUCH A KEY! If you try to learn the code by sending before you can recieve it, you'll be sending far faster than you can copy it.

Probably by the time you read this you have already taken and or passed it. Good luck whichever way it went. If you passed welcome to HF, if not, you now know what it's really like and how to prepare for it again.

I got my first ticket in 2000, took both the Tech and General written. Never got on the air till 2001 when I took the CW portion to finish my General, then I treated myself and got a used Kenwood TS820 and a 2 meter Alinco.

Look for you on HF someday.

Ray

Also look at www.nist.gov. They have downloadable sources for
their time program. The also have the spec for the various time
protocols.

Huh? On the air, the spacing should match the character speed. IE: if
at 20 wpm characters, you should be using a normal 20 wpm spacing.
Farnsworth is only a learning method. It's not intended to be used on
the air that way. You should use normal spacing on the air.

Thats fairly normal. I've always been able to send faster than I can
receive, and I think most all are the same way. It's less of a process
to have the brain tell fingers what to send, than having the ears hear
something, and then having the brain decode it. MK

Can you tell me how to find this Q201 everyone seems to be talking
about?
I have a BC100XLT that has all the symptoms of this seemingly coomon
problem yet I dont know how to locate it on the board. Any help would
be greatly apprciated. Someone HAS to have done this repair?! PLEASE
HELP if at all possible.

Thanks,

Paul

Uniden/Bearcat BC200XLT Portable - Loss of Audio and Dial Lamp
If you can program frequencies into your BC200XLT but there is no
audio and
the green backlight no longer functions, a tiny transistor may have
failed.
Check for a defective PNP surface mount transistor, Q201
(2SB815B6-YDY).
Q201 is used as a switch to furnish 8 VDC to several stages of the
BC200XLT.
Its main purpose is to switch off power hungry stages of the BC200XLT
when
the CPU thinks the NiCd voltage has fallen below a threshhold. That's
an
attempt to limit the current drain on weak NiCds to avoid permanent
damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the
black
multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by
something in
the scanner drawing too much current through it. In one case,
capacitor C36
shorted. It's a 220 uF 10v electrolytic, located on the component side
of
the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to
ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports
he
substituted a 2SA1298 for Q201 and it worked fine. In a pinch you
bypass
Q201 by soldering a short piece of bare wire between the collector and
emitter, but you must first fix the component which caused Q201 to
fail

I own a Yaesu VX-5R and have managed to get it communicating at
1200bps AFSK using the Linux soundmodem. I am unable to establish
9600bps FSK to a radio in the same building!

Is the VX-5R not 9600bps capable? If anyone has any insight it is
much appreciated.

Thanks

I purchased a Yaesu VX-5R last year and am disappointed with it, particularly battery life. I travel for business nearly 100% of the time and find that the ON/OFF button is easily pushed on when in my laptop case. Therefore when I get to where I'm going the little sucker is out of juice. Also, I have yet to find a 6 meter repeater to work.

Additionally, wide band receive on all the handhelds is pretty much a joke. They work best near the frequencies you can transmit on. Don't think for a minute that the little 6 inch antenna is gonna pick up WWV on 10 MHz, unless of course you are right on top of it.

As a positive, I have been a ham since 1972 and appreciate the technology and effort that goes into designing very small radios. The VX-5R tranceives very well on 2M and 440 and is an excellent radio for listening in the Aircraft AM band.

Good luck and 73 de W1AAE

Despite the users complaints, the VX-5R is an excellent rig. It has many features that make it very attractive.

You might try looking at ehams.net --> revews.

Generally, no standard FM rig is 9600bd capable unless it is included as a mod
or a feature. 9.6K operation requires the audio to be taken directly off of
the discriminator circuit.

Most electronic engineers and electritians have made "Earth Potential" the zero voltage reference. This is why most electronic components the chasis is usualy grounded so that the risk of electric shock is reduced. If a hot lead comes in contact with the chasis it will simply trip the breaker as it is shorted to ground. Hope that helps.

also do a google search for grounding theory

Well, there was Dipolonius, the Roman senator. And there was Petroleum
Blownaparte, the former King of France who had a very bad experience with
a Cantenna dummy load.

Even the youngest of schoolchildren has been taught that Vikings appeared
on the American continent as early as the eighth century AD, although of
course AM modulation was okay back then.

And even Tennessee Williams was an amateur radio operator. His long-lost
play "Morning Becomes Electric" about an all-night DXing session, is another
fine example of this hobby influencing the arts.

My Icom 2100H requires 16A when in the high power (50 watt) mode. I'm

familiar with the Astron RS-20M supply. Unfortunately, I have no experience
with the Astron SS (Switching) power supplies and am thinking about getting
a SS-18. Astron claims the SS supplies are "specially filtered for use with
communications equipment for all frequencies..."

Any comments/suggestions on using a Switching System power supply for
VHF/UHF?

Thanks
Ken Coghill III, WB4ZOH

I also have a 757 GX II. I have the manual but what does the tech. supplement
have that I need?
Thanks in advance...

It is more like a repair manual. It has the internal tuning and adjusting information and the schematics for the radio. If you do not want to repair this radio then you do not need it. If you want to reapir it , then you need the tech. suppelment.

Interesting - on the faceplate, it says "Submersible"!

I once let my young daughter, a semi-experienced sailor, go out in our little sailboat. She carried a VX-1R in case of problems, and I monitored the frequency from shore. Of course, the trouble she encountered was gusty winds that dumped the boat, and the ziplock bag containing the radio had a leak. No problem for her - she swims well, and I saw her problem from shore right away. The radio, however, took me many months to put back in working shape.

I'd love to have a handheld that could stand up to a quick immersion or a heavy spray off the bow. Nice feature!

Bob, KI8AB

Andy Griffith the actor is NOT this person. If any of the callsign servers still gave the birth date, this would be painfully obvious. The ages are off by at least 20 years. The actor would had to have been 17 years old when he was doing the Mayberry stint. He wasn't.

I can't think of another name at the moment, but I'm sure this sort
of mistaken identity has come up before.  Someone sees a famous
name in the callbook, and assumes it's the famous person, when
in reality, it's just someone with the same name.  When this
```

sort of thread has come up before, I'm sure there have been
debates on other names about whether the famous really were hams
or not.

It's not totally unexpected. People want the recognition of
the hobby that a famous name would seem to provide, so if
they see a famous name, then they accept it as the famous
person without any further consideration.

   Michael VE2BVW

Tried that, but that didn't work out.  It did in a sense, but not quite what
I was looking for.

Thanks, for your help.

I am looking for a 2m/440MHz/1.2GHz BASE radio that has its own power supply built-in.
What are my choices?
Are there any of these that have a built in antenna tuner?

I'm studying now and wish to start saving so when I pass, I can Acquire Toys. Especially interested in a 2m HT which also does other bands.

1) Seems to me there may be design compromises in multiband rigs. What are your experiences w/ 5w HTs? Especially interested in Yaesu FT-50RDHP, Yaesu VX-5R, Kenwood TH-F6A & TH-D7A(G). Packet data is a priority.

For emergency ops in CONUS, which is more useful: 6m or 220mHz? I've gotten a few suggestions from the local ARC amateurs, but wish a broader sample. I'm in OR but expect in a year or so to be qualified for ARC DSHR missions.

Thank you for your kind assistance in advance. I don't read email sent to the posting address; please only reply on USENET.

Since I'm an IT guy, Packet interests me; especially since all of our EOCs in my area have packet rigs. I'm looking at 5w HT rigs with TNC built in to connect to my existing PalmOS handheld, and would appreciate suggestions on What To Buy.

I'm also looking at a TNC in a Springboard module to plug into a Visor handheld from http://www.shinemicro.com/SM2496TNCpage.htm

Has anyone here used a PalmOS handheld for packet data?

Which apps have you used?

Thank you for your kind assistance in advance. I don't read email sent to the posting address; please only reply on USENET.

Neither really. There's not that many hams on either one of those
bands in comparison to 2m or 70cm. But I don't know what your purposes
are. A quiet "get away from the crowd" freq, yes maybe. But if you
want to reach the highest number of hams in the area, I'd think 2m
would be the best route. 70 cm second choice. MK

i dont believe you will find any anymore with a built in power supply and a

tuner at these freqs are worthless there is so much signal loss that at 1.2gig
no signal would even get to the antenna honestly i dont know why anyone would
want a tuner on VHF and above the antennas are so small and most cover the
entire band anyways what do you need to tune
i think the only radios out thart cover all 3 bands are the kenwood TS790 and
the icom 910 or ic970
good luck

your right multiband radios are comprimises there front ends are very
wide open and can pick up lots of intermod
as for packet with 5 watts i wouldnt waste my time unless you are within
20 miles of a BBS and you put up a good gain antenna
unless you really need the portability of an HT just get a dual band
mobile radio and a power supply the radio will have about 50 watts which
will be able to hit anything you can hear

as for your other post on which is better 6 or 220 it all depends on your area some places have a lot of activity on 220 others like down here in central florida there is hardly any
same with 6 the only neat thing about 6 is some times the band opens and you can work DX which can be a blast

John Bartley wrote:

As far as usefullness. 6 meters with only 5 watts of is not going to do much, unless you can see a 6 meter repeater. As far as 220, unless there is a repeater in your area 220 will not be that much better. If you are in an area with lots of large hills and mountains, you can forget about simplex. Ask the local hams, not knowing your area it is hard to say. I live in an area with lots of hills, even a small hill can be a problem on simplex. If you are going to operate from your car get a real radio with a real antenna and leave save the HT for when you are on foot.

I am planning a trip to Canada (Ontario mostly) this next summer. Our
event is about 2.5 hours NE of Toronto.

I am a licensed ham in the US. My understanding is that the US and
Canada have a reciprocal agreement that simplifies operations for a
ham from one country who is traveling in the other one.

Questions:

What kind of repeater coverage in the area, 2M or 70cm?

How active are local ham clubs?

Any other thoughts for HT or mobile operations?

TIA,
Happy trails,
Gary (net.yogi.bear)

Hi Gary
I am located about 1.5 hours east of Toronto what area are you headed for
?
Your description sounds like it's near Algonquin Park.
The Toronto area has lots of repeaters both 440 and 2m.
If you can give me a location name I can send specific info.
My web page has some info Ontario repeaters in General at
http://www.qsl.net/va3pkh/repeater.html
http://www.qsl.net/va3pkh/70cm.html
Hugh VE3AYR has a great pocket guide available at
http://www.bigwave.ca/~janus/hrm/ord/index.html
Contact me direct at va3pkh@rac.ca if you need more info.

I would like to use a earpiece/boom microphone with my Icom HT. I've
tried the Workman "Mini-Boom" mic and it's small boom length is
unsatisfactory.   Any suggestions?

Should anyone have a bend for Linux, I found a project at http://sf.net/projects/cwtext that will read text from STDIN and generate Morse to STDOUT in raw PCM. I cleaned up the timing and mailed the modified files to the original author (the source is GPL) and I've not heard anything back.

If anyone wants to play with it, grab the 0.91 tarball from the above link and I'll be glad to supply my diffs. Right now its very immature as it uses a few command line options and corresponding constants in the source to set the character speed and word spacing. Also, the PCM output is quite harsh and it would be nice if the audio wave were damped to some degree.

Does anyone know where I can find the front and back cd covers for the following albums? Or recommend a good site?

Lenny Kravitz - Lenny
Prodigy - The fat of the land
Chemical Borthers - Come with us
The Charlie Daniels Band - Homesick Heroes
Brandy - Full moon

Thanks!
I've tried some sites but I need to run a pop-up killer on them.

Precisely the info I was looking for. Thank you.

> If you are in an area
> with lots of large hills and mountains, you can forget about simplex.

Actually, I was asking about ops away from home with ARC.

> Ask the
> local hams, not knowing your area it is hard to say. I live in an area with

Aha! A disconnect, here: I don't have a car and am disinclined to get
one again. It the ARC wants to send me somewhere, I will gladly use
their rental, though.

I use "AboutTime" (with my PC). It provides both a time client and time server.

Are you sure that the other programs only work with dial-up? That seems
rather odd to me since I doubt there are too many places that you can
directly dial into for the time. I'd suggest that it's probably more likely
that the computer is attempting to establish a connection to the internet
when they want to read the time. This would be an action of Windows
(assuming you are using Windows), rather than the time setting program
itself.

regards,
Mark

Hello,

I have been getting reports telling me that my transmitted audio is very
quiet, even when I talk very close to my microphone.

I am using an Icom IC-2E handheld radio.

Does anyone have a schematic / circuit diagram for this radio, that I could
have a copy of ?

Thanks!

As I get ready to move into a new QTH, I'd like to try to get
everything grounded, to help reduce the chance of RFI to my neighbors.
I am considering buying something off of Ebay that says it's a "HEAVY
DUTY GROUND BUSS WITH 27 CONNECTIONS" and it's at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1337605421. Can
anyone tell me if something like this is really useful? From what I've
read at the ARRL website on grounding, it's important to ground
everything and this might be a good solution.

Single point grounding to a central ground bus is important, and worth doing to avoid ground loops, RFI, etc.

However the item advertised on Ebay looks like the typical bus that's inside a circuit breaker box. Nothing wrong with it, but don't pay a lot of money for it...chances are you go to a Home Depot or other large hardware store and in the electrical department you will find circuit breaker boxes which contain the same hardware...and which you might be able to buy separately...or I guess you could use a new circuit breaker box as your centralized ground.

For best results, not to mention safety, be sure you connect your central ground system to a good earth ground using really heavy guage copper wire.

Good luck & 73
DT

Grounding will have no effect on any RFI to your neighbors. Any
problems they will have at that distance will be from fundimental
overload. The distance from your antenna to them, and decoupling of
your feedlines to avoid high levels of rf on the shield of the coax is
what you want to be thinking about. The decoupling of the lines will
have more effect on your house than to your neighbors. The distance of
the antenna will have more effect to them. They will need tight rf
connections themselves if they use cable , etc. MK

Now I recall that particular movie.
It involved a Ham operator that the by made friends with, and after the Ham died, I think, the boy tried using the equipment.
But it's been a number of years since I saw that one.

Probably the best I have seen is the Yaesu 1500M.  It retails for only
$150, and it does 9600 Baud too.  I am using one for packet now.

I need help picking the best 6 meter vertical antenna.
I think I have narrowed it down to:
Hy-Gain V-6R
Diamond DP-GH62

Has anyone ever used these two antennas and if so wich are the best in radiation, gain, and quality.

THANX!

I tell ya what. I'm sure the Hy-Gain and the Diamond do is very nice job. I
used a Lakeview Colinear several years ago on 6, with VERY good results. It
is very inexpensive too! Non of these do as well as a good beam or quad, but
for the money, the Lakeview did an excellent job! http://www.hamstick.com/

hey jeep
i used a mosley diplomat for 6 meters its a 5/8s wave vertical with a
ground plane under it i had one at 60 feet and it was nearly only a DB or
so off what my 5 ele yagi was that was at 50 feet
i think they still make them but when buying from them be paitent they
take a long time to get things from

I need a copy of manual for a hallicrafters FPM 300 transciever. I also need
to know how to connect up power connectors for 12 volts dc and 120 volts ac,

If you can provide info please email me at tuttlej2@attbi.com

Thank You
Jay Tuttle

Try DXMON  writen by VE3SUN . Download fm:

 http://www.benlo.com/dxmon.html

It is mainly a very clever and sophisticated DX-Cluster Monitor.
Exact time here is needed to calculate the iaru www bacon system maps.

There are wireless LANS commercially available.

There are also wireless internet connections. Check with the ISPs in your area.

Theoretically, if he does have a ham license, he could run packet from a remote location, but he would be limited to what would be legal on amateur frequencies.

That would be a new one on me...I've used car batteries for years. My 706 is running on one right now. I ran a 730 off one for over ten years. I've never had a problem using a car battery. Just don't let it run down too far. Not good for them.

  I am going to be getting involved in ARES and Satern
> emergency services. I would imagine I need something to run 12 hours or so
> at a time and always a possibility a generator would not be available.

Depends on the current draw. The problem with a car battery is they don't like to be discharged too far. Now, if you are running a small low current draw radio, a car battery might make 12 hours just fine. But if you are on a FD, and running a 20 amp draw hf rig, then you will need something better. In that case, I would use the deep cycle batteries. My last deep cycle was rated at 115 amp/hours. This means my radio at 20 amps, could run non stop at full power for nearly 5-6 hours. Of course, in the real world , my duty cycle is much lower than that, say 50% for a FD, so you could probably get 10-12 hours. Go QRP??? Add many more hours to that. My 706 draws about 1.5-2 amps receive. It could go nearly 50-60 hours on receive. Of course, you have to factor in voltage drop when you get towards the end of the charge. Anyway, if you are like me, and use hi-current HF rigs, only the biggest baddest batteries will do. I use car batteries for short spells, or if I have a charger on hand to keep it up, and a good deep cycle for long haul stuff when I have no charger. Need more time than 115 AH? Get more batteries. The gel cells , etc, are ok, but fairly puny in general for most of them. You probably can get big car size gel cells, but I bet the price is high. At 55-65 $ for a marine deep cycle, I find them about the most bang foe the buck. Also, they can double as a car battery in a pinch if you run one down. Usually when camping , I carry both car and deep cycle batteries. Also, A tip...Use very THICK wire from the radios to the batteries. This way you will minimize the voltage drop. It can become critical for some radios as the battery starts to discharge a bit. Icoms have alway been kind of voltage picky. I use thick jumper cable wire and anderson power connectors, which I might add are the best connectors you can find. I recommend.. MK

sounds like you want everything for nothing hell i would love a young rich
beautiful wife with a killer body and who wouldnt tell me no when ever i wanted
to have sex or spend money on ham toys
but this is the real world and i know i wouldnt find her anywhere but in dream
land
so if you want a radio similar to what you wish you need around $1000 its called
the katchina or the one from ten-tec cant remember the name
good luck and wake up

Message-ID: <20020213233158.12083.00000019@mb-mt.aol.com>
Xref: archiver1.google.com rec.radio.amateur:3130

Pins out on the FTS12 module seem to be:

Pin 1: Tone
Pin 2: CPU 5V
Pin 3: Tone STB
Pin 4: Data
Pin 5: Clock
Pin 6: Det In (off pin 29 of the MN6520)
Pin 7: Tone C
Pin 8: AF Out
Pin 9: Tx Sw
Pin 10: Gnd

Now, please understand that I've done my best to read the almost invisible print on the FTS-12 "schematic" which accompanied my unit. I can scan it in...but the print is so small I don't know if it would reproduce.

Let me know if I can help.

Cheers;
Andrew

Your computer may already have most of the parts you need. You could use a simple receiver front-end combined with your PC's sound card and CPU as a DSP receiver. I remember seeing details of such a project, I think it was called Linradio.

How fast is your graphics card? it should have three high speed DAC's, clocked at several hundred MHz. You should be able to make it generate a signal at HF. CW should be easy, SSB, AM and FM might be possible too. Don't forget to put a LPF on the output.

> I would wish to have all functions desktop controllable. No more knobs to twiddle. It should of course sell for no more that $59.99 U.S.

Thats a bit extravagant, it should cost no more than $10.

You'll have to write most of the software yourself, so hurry up!
and be ready for the peak of the next solar cycle :-)

I'm running WinAPRS.

1) How can I tell if I'm being received? I found
http://www.findu.com/cgi-bin/find.cgi?*, but there's a big delay, and
I'm trying to figure out how little power I need. I'd rather just
copy the station that's digipeating me.

2) What's the format for lat/lon in the packets. It appears to be
ddmm.mm, but I can't find it in the documentation.

3) Will the TNC continue to beacon my fixed location every 30 minutes,
even if WinAPRS isn't running, or if the PC is off? I checked the
contents of the TNC using a dumb terminal, and BTEXT isn't used by
WinAPRS.

Thanks!

Please email me directly at cruiser1100NOSPAM@cox.net, removing the

NOSPAM.

Can some one help me on how to reset this radio I have done the following mod for this radio
Channel mod for the Alinco DJ-G5E
You can put your radio in channel mode:

Keylock your radio (Func 0)
Press Func #986

It will appear on the screen Ch 1
This channel is M1.
If you have M100 then you will have 100 channels

To put the radio in "normal" mode just press:

Func *284

Now the problem is that it is in channel mode and I can't get out of it. I am unable to reset the radio by holding the function button while powering on. when I push one of the front buttons on the radio I just get tones from the speaker. Any suggestions anyone?
Thanks in advance Wally, VE7IF

Amateur Radio Newsline Report 1279 – February 15, 2002

Amateur Radio Newsline report number 1279 with a release date of Friday, February 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio helps in the face of a California wildfire and an appeals court says that pirate broadcasters cannot be banned from getting FCC licenses. These stories are first on Amateur Radio Newsline report number 1279 coming your war right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS AID AT FALLBROOK CA. FIRE

Ham radio was on the scene as a wind-whipped fire raced through the remote north-western portion of Fallbrook California on Sunday February 10th. Sixteen homes were destroyed along with one sheriff's vehicle and two fire trucks. Among the houses that suffered damage was that of Grammy winner Rita Coolidge. An estimate 2600 acres were burned as this report is being prepared. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

According to Bob Gonsett, W6VR, Amateur radio operators were more than ready when the emergency the emergency hit. And so was their local repeater system:

--

W6VR: “We have two repeater systems that are tied together on Red Mountain that serve Fallbrook and Fallbrook is fortunately a hotbed of Amateur Radio activity. Lots of logistics communications took place in support of Red Cross activities, animal evacuations, people evacuations and it was a very, very busy repeater system which, incidentally, is backed up by emergency power.”

--

Gonsett, who is editor of the CGC Communicator broadcast industry newsletter says that hams were posted at key points in the community. This included the fire department, the sheriffs department, the hospital and the evacuation centers. Some hams provided mobile communications for animal rescue operations. Others, who specialize in evacuation matters and health and welfare traffic worked in conjunction with the American Red Cross to provide support. W6VR says that it was just about a textbook ham radio communications effort for both people and equipment.

--

W6VR: “Their performance was outstanding in every respect. The repeaters worked flawlessly. There was no jamming. The greater community pulled together on this one.”

--

Volunteers came from across the region. Bill and Wayne Dewey, WD6AHW and WD6AHX, served as the Net Control operators. A father and son team, the Dewey’s spent hours directing all radio communications on the Fallbrook Amateur Radio Club's repeaters. Another ham volunteer was Jess Mauk, KD6YEI, of San Diego. He manned a RACES van sent in from San Diego County. In all close to thirty radio amateurs served in the first wave of volunteer communicators. Gonsett says that hams were there because they wanted to help:

--

W6VR: “It was really heartwarming to find such an outpouring of devotion from the ham community in people coming up here and making their presence known and contributing as they could. They were all useful and the community leaders thanked us repeatedly for our roles.”

--

Most communications took place over the Fallbrook Amateur Radio Club’s dual redundancy repeater system This is actually two separate machines designed and built by Chris Durso, AA4CD. One outputs on 146.175 MHz and the other on 445.600 MHz. Both carry the same audio. In time of emergency anyone with a scanner radio in the Fallbrook and Temecula California area can tune to either frequency and hear all of the ham radio communications.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

One last note. According to Gonsett, one of the luckiest hams on Earth has to be Joel Brown, KE6FHS. Brown is the president of the Fallbrook Amateur Radio Club. His home survived the wildfire. Sadly, his immediate neighbor’s' house burned to the ground. (ARNewsline(tm), W6VR)

**

RADIO LAW: COURT THROWS OUR PIRATE RADIO LICENSING BAN

Just because a person one operated a pirate radio station is not enough reason for the FCC to ban him from ever getting a broadcasting permit. So says a Washington D.C. Federal Appeals court. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from the nations capitol:

--

The government is not allowed to use your past as a bootleg radio operator to block you from holding a legitimate broadcast license, according to a ruling from a federal appeals court February 8th.

But any victory might be short-lived for onetime pirate operators wanting to turn legit.

The case out of Washington DC involved Greg Ruggiero, a onetime bootleg radio station operator around New York. He challenged an FCC rule that bans those found guilty of pirate broadcasting from ever holding a license, or being formally associated with the recently-created low-power radio station service, an industry that has become known as FM microbroadcasting.

The appeals court agreed with Ruggiero's claim such a ban is unconstitutional as the law is now written. But the court also left open the possibility Congress could write a more narrow law in line with the First and Fifth Amendments. Part of the argument centered on a protest philosophy held by many unauthorized microbroadcasters, who see their bootleg ops as civil disobedience.

The appeals court, siding with the former bootlegger, said there was some evidence Congress, in writing the ban into broadcast law, meant to punish those with a protest message, without really improving future compliance with the law. They called it viewpoint discrimination, and said ... not allowed.

Communications law experts are mixed whether the ruling has implications beyond FM low-power broadcast licensing, including whether FCC can use violations in one service to administer broader punishment.

Traditionally, the FCC has kept open the option of revoking other licenses held by a violator, beyond the service where the violation took place. For example, someone in violation on the ham bands might have his commercial radiotelephone license pulled as well.

In Washington, Paul Courson, WA3VJB, reporting for the Amateur Radio Newsline.

--

And what might this decision mean to Amateur Radio? Especially those cases where ham licenses are challenged based on character issues. According to retired ARRL President George Wilson, W4OYI, probably very little. George, who is also an attorney, says that despite the ruling, the FCC still has the authority on a case by case basis to deny a license to a pirate broadcaster. They can also still designate for hearing the license of any station who breaks the law or violates government rules. (Published news reports)

**

RADIO LAW: FOIA BECOMING MORE DIFFICULT

Hams fighting the FCC over enforcement and other issues are finding it a lot more difficult to obtain government records under the Freedom of Information Act. This is because of an administration policy change made a month after the September 11th terrorist attacks. That’s when Attorney General John Ashcroft directed all agency leaders to be more cautious in releasing records.

Over the years, some hams who have been tagged with violations by the FCC have tried to use the federal Freedom of Information Act to try to get a line on their accusers. Most of the time the government refuses unless the person making the request can show good reason for the information to be released.

While not of a national security nature, none the less, bureaus like the FCC will most likely be heading the words of Attorney General John Ashcroft who says that agencies must carefully consider things including the effectiveness of law enforcement before releasing any documents. Ashcroft says that agencies that legitimately turn down requests made under the Freedom of Information Act will have the backing of the Justice Department in doing so. (Published news reports)

RAIN PROMO: HOW MANY HAMS ARE THERE IN THE USA?

I’m Greg Sperling, KB9DBC.

Just how many hams are there in the United States?

As you heard last week here on Amateur Radio Newsline, the picture is not a rosy one. You can hear Bill Pasternak, WA6ITF, interview with W5YI publisher and VEC Fred Maia this week on the RAIN Report. It is accessible in both Windows Media and RealAudio at www.rainreport.com and for the technologically challenged by telephone at 847-827-7246. (RAIN)

ENFORCEMENT: LOS ANGELES AREA PAROLED RADIO OPERATOR RE-ASSERTED FOR PROBATION VIOLATION

A Bell California man on parole for jamming police communications is now being held without bail for violating his probation and allegedly making death threats on the 2 meter band. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details.

--

You may remember that back on November 14, 2001, the FCC set aside an Amateur Service license and the call sign KG6IRO that it had issued to one Jack Gerritson. That grant was made only a few days earlier on November 8th. The Commission took action after it received information that Gerritsen had been arrested in 1999 and convicted in 2000 for interference to the Los Angeles Police Department radio system.

Gerritsen was out on parole after serving one year of a five year prison term on that conviction. On January 29, Los Angeles FCC agents participated in the pre-dawn re-arrest of Gerritsen after authorities received complaints of death threats allegedly made by him on several Amateur frequencies.

As Gerritsen was on parole in the earlier case, a no-bail search and arrest warrant was served. This is because the terms of his probation banned him from possessing any kind of radio transmitting equipment.

But at the time he was taken into custody Gerritsen reportedly had over twenty radios at his premises. Of these the FCC says that eight were capable of operating on frequencies in the Amateur, Marine, Land Mobile and Public Safety bands. The FCC says that Gerritsen even had a Marine radio with batteries connected to it, and a length of antenna line running outside his residence hidden in a closet.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC says that after they set aside Gerritsen license that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. It acted on these complaints. Now Gerritsen may spend the next four years in jail. (FCC release, other sources)

**

ENFORCEMENT: FCC ORDERS POWER COMPANY TO HELP A HAM

The FCC has told an Alabama power utility that it has to clear up interference it is causing to a local ham radio operator. Amateur Radio Newsline's David

Black KB4KCH, has the latest from our South East Bureau in Birmingham:

--

For more than two and a half years, Dan Jeswald, W4NTI, says his ham radio communications have been hampered by a pesky problem: interference. Jeswald moved to Anniston, Alabama, in June, 1999. It wasn't long after that, he says, that he began experiencing interference on numerous high frequency bands. He says 6 meters became unusable because of popping sounds and other interference Jeswald says sometimes rates full scale on his equipment. He says the noise is worst during cold weather and sometimes goes on for days.

Jeswald suspected a faulty transformer or other power company equipment. He says he contacted Alabama Power. Jeswald says the power company responded and began working on the problem. But in midstream before the problems were eliminated, Jeswald says there was a change of people he dealt with at the power company. Jeswald says his efforts to get help with the problem since then
have gone nowhere.

With few options left, Jeswald contacted the ARRL, which put him in touch with the FCC. On January 30th, Special Counsel Riley Hollingsworth sent a letter to Alabama Power's Chief Executive Officer. In the letter, Hollingsworth advises the utility about Commission rules governing equipment that generates unintended interference. And he informs the company of its responsibility to fix the problem, or possibly face fines if a violation is found.

A call to the power company seeking comment was not returned. Meanwhile, Dan Jeswald just hopes the airwaves clear up--and soon.

From Birmingham, Alabama, David Black, KB4KCH, for the Amateur Radio Newsline.

--

Alabama Power was given thirty days to advise W4NTI as to what steps it was taking to solve the interference. (FCC release)

**

THE CHANGING OF THE GUARD: WAYNE WILLIAMS, K4MOB - S.K.

A radio amateur who dedicated almost a quarter of a century editing a ham radio magazine has crossed over to the other side of the Ethereal Abyss. This with word that Wayne Williams K4MOB, editor of the SouthEastern Repeater Association magazine "The SERA Repeater Journal" has passed away.

According to Gary Pearce, KN4AQ, Williams died at home early Tuesday morning, February 12th of complications from cancer. He was 65 years old.

Pearce says that Williams passion in Amateur Radio was FM and repeaters. He became active in SERA's predecessor, the Carolinas-Virginia Repeater Association, in the early 70's. This, at a time when two meter FM was just beginning to gain in popularity.

In 1977 Williams became the editor for the group's magazine, the Repeater Journal. The Journal was already a respectable size 44 page booklet, with regional advertising from local dealers and hamfests. But over the next 23 years, K4MOB built it into a quarterly magazine featuring full-color covers and both national and regional advertising.

--

Gary Pearce KN4AQ: “Through the Repeater Journal and through the coordination body Wayne helped to provide the infrastructure that we enjoy today on VHF and UHF FM. Repeaters that we can operate with a minimum of interference and maximum of range and quality of enjoyment.”

--

In parallel with his SERA activity, K4MOB also established Williams Radio. He started the business by amassing a huge inventory of crystals. In that pre-synthesizer era, two meter FM radios required a pair of crystals for each frequency used. Other crystal sources made hams wait days or weeks for delivery but Williams Radio was one of the few instant sources of crystals for almost every frequency, and for almost every radio. Later, the business added accessories and several lines of radios. It was a family affair, with Williams wife, brother and sons pitching in at hamfests across the region. K4MOB retired from Williams Radio in 1997.

Wayne Williams, K4MOB, is survived by his wife Gerry KB4SER, and two sons, Wayne Jr. and Chris. A third son, Greg, passed away in 2000. Pierce says that Wayne Williams was a very special man in ham radio. All that knew him say that he will be missed. (KN4AQ)

**

AWARDS: THE VITA WIRELESS SAMARITAN AWARDS

The Cellular Telecommunications and Internet Association along with the Cellular Telecommunications industry Association’s Wireless Foundation have honored the winners of the 2001 VITA Wireless Samaritan Awards and the 2001 Wireless Industry Achievement Awards. Among the recipients are average citizens from Massachusetts, New Hampshire, Texas and South Dakota, who had the presence of mind to turn to their cellular telephones in emergency situations. The VITA Wireless Samaritan Awards are given annually to individuals from all 50 states, the District of Columbia, and Puerto Rico. (CTIA Release)

**

AWARDS: HAMAWARDS.COM

Hamawards.com is a new website that is currently under development. According to Anthony Farmer, KB3HGY, the mission of hamawards.com is to provide centralized on-line information regarding all awards that an Amateur Radio Operator can receive. The site is currently being developed. More information is at www.hamawards.com. (News release)

**

BREAK 2

HAM RADIO AT THE WINTER OLYMPICS: ANOTHER COMMEMORATIVE STATION

Yet another commemorative station is taking to the airwaves form near the site of the 2002 Winter Olympics. Linda Reeder, N7HVF, reports from Salt Lake City Utah.

--
Linda Reeder, N7HVF: “It will start on Friday February 22nd at 5 PM to the 24th. Our station call will be K7O on 80 through 10 meters. If you want a QSL send an self addressed stamped envelope to Mark Richardson, W7HPW, 11361 South 5825 West Payson Utah 84651-3622”
--

Again the call sign to listen for is K7O and QSL’s with a SASE go to Mark Richardson, W7HPW, 11361 South 5825 West Payson Utah 84651-3622 (ARNewsline (tm), N7HVF)

**

CONVENTIONS: HAMVENTION 2002 BANQUET MASTER OF CEREMONIES NAMED
The Master of Ceremonies for the 2002 Dayton Hamvention Banquet will be Carl Nichols, N8WFQ. Nichols is the Chief Meteorologist for WDTN channel 2 News in Dayton. This is a forth return performance for Nichols who served as Hamvention banquet Master of Ceremonies since 1998. (DARA)

**

CONVENTIONS: WIA IN MELBOURNE IN MAY

The 2002 Federal Convention and Annual General Meeting of the Wireless Institute of Australia is now slated for the city of Melbourne on the 17th, 18th and 19th of May. Among the many subjects to be discussed at the meeting will be a possible restructuring of the WIA and the possibility of a Foundation class license similar to that recently introduced in the U-K. (WIA)

**
HAM RADIO IN SPACE: HAMS ASKED TO HELP NANOSAT PROJECT

Ham radio is being asked to provide technical support for an upcoming satellite project. Jeramy Boot, G4NJH, says it is a bird called Nanosat:

--

John Heath, G7HIA, the Secretary of the National Space Centre Amateur Radio Society, reports that Bristol University is asking the world-wide amateur radio community to assist with data capture from their forthcoming Nano Satellite Project.

Hand-launched from the Space Shuttle during a space walk, the 6.5-kilogram satellite will send data that can be decoded with software available free from their web site. The software is not yet written because the university wants to give amateurs the chance to have input into how they would like the data stream: 1200 baud AX25 packet, 9K6 packet, Bell 202, or Soundcard etc. More information and an on-line survey form is available on the web at www.handsat.co.uk

Jeramy Boot, G4NJH

--

If you missed that website address you can find it in the print edition of this weeks amateur Radio Newsline report. (GB2RS)

**

INTERNATIONAL - ENGLAND: QUEEN ELIZABETH’S 50TH ANNIVERSARY

Thanks to the efforts of the Radio Society of Great Britain, UK Amateur Radio operators will be taking part in a very special celebration. On Wednesday the 6th of February, England’s Queen Elizabeth marked the 50th anniversary of her accession to the royal throne. The Queen's Golden Jubilee will be celebrated next June, and the RSGB has negotiated the use of a special prefix for the celebration. Starting June 1st and continuing through the 30th, UK hams will be permitted use of the 'GQ' prefix to help commemorate the event. (GB2RS)

**

DX

In DX, E20NGF says over the Internet that there is now a new Worked All Thailand Provinces award. There are currently 76 in Thailand and this particular awards requires that you contact and confirm each one. And while E20NGF calls it a great challenge to all award chasers, he also notes that its not all that difficult to log 20 provinces these days with more than 1000 Thai hams already on H-F. Check the various DX and awards websites for full information. (RSGB)

**

THAT FINAL ITEM: THE NEW ZEALAND AREC AWARD

And finally this week, New Zealand’s team of Amateur Radio Emergency Communications volunteers has received an important award. Its a special honor in recognition of their providing support of Search and Rescue efforts down-under. Amateur Radio Newslines Jim Meachen ZL2BHF in Auckland has more:

--

The inaugural presentation of the New Zealand National Search and Rescue Award for the year 2001 was made to AREC at a ceremony held in Wellington earlier this month.

The Award recognizing AREC's outstanding performance and contribution to search and rescue in New Zealand was made by Marion Hobbs MP on behalf of the Government Minister of Transport. In presenting the Awards Marion Hobbs said of AREC:

--
Sound Here
--

Brian Purdie ZL2ADL the National Director of Amateur Radio Emergency Communications accepted the Award on behalf of the AREC team and thanked the New Zealand National Search and Rescue Committee for the award.

--
Sound Here
--

The National Director of New Zealand's Amateur Radio Emergency Communications Brian Purdie ZL2ADL. Further detail of the award ceremony with photographs can be found on the NZART web site at www.nzart.org.nz.

From Auckland New Zealand, I'm Jim Meachen ZL2BHF for Newsline.

--

By the way, ZL2BHF says that he will be a flying in from Kiwi Land to take part in this years Amateur Radio Newsline sponsored live Ham Radio Town Hall meeting. It takes place at the 2002 Dayton Hamvention at 1 p.m. Eastern time on Saturday, May 18th. (ZL2BHF)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, we want to mention that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm ______________ saying 73, and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Does anybody have the info on changing the PA tube (8950) over to the 6HF5 in the 1011 series?   Have one I want to put on 10 meters, the 8950 is missing and more expensive than hens teeth.

Also need a meter for this radio or a suggestion for a replacement.

Thanks

The website for the Siltronix only makes mention of the conversion and makes a vague reference to an out of print ARRL book from the 80's of a collection of Hint's & Kinks.

If anyone has the info on how to do this conversion it would be greatly appreciated, since 10 is hot now, I would like to put this old rig on the air. Before 10 goes dead for the next 11 years.

Thanks
Ray

Use a 6KD6 and change the plate cap, rebias, re-neutralize.
Check the pinout first I believe its the same.
You will have to go easy on it since the 6KD6 rating is less than an 8950.

>Also need a meter
Ray, I wouldn't invest to much $$ in that set, they are junk and drift worse
than HW-101's
I doubt you will be keeping it if you get it working
-Joe

Hi everybody.

I have been thinking about buying Sony ICF-SW7600GR
receiver. But I found following information on the Web
about Sony ICF-SW7600 receiver:

ICF-SW7600
Radio Netherlands' measurements

Frequency Range	Sensitivity (in microvolts) for 20 dB S+N/N
2 - 6 MHz	2.1 mkV
12 - 17 MHz	10.6 mkV

Bandwidth	Dynamic Selectivity
+/- 5 kHz	26.0 dB
+/- 10 kHz	46.0 dB
+/- 15 kHz	51.0 dB

Blocking level .... 4.2 mV

Image Rejection .... 16 dB

(at +/- 910 kHz)

Intercept Point .... -5 dBm

And I'm wondering:
 Does Sony ICF-SW7600GR have the same selectivity and sensitivity
as Sony ICF-SW7600 ? I think that above mentioned characteristics
are too bad for receiver of that class (dual conversion, Synchronous
detection and so on).
Could anybody tell me smth about selectivity and sensitivity of
Sony ICF-SW7600G/GR model?
Has they been improved?
Maybe anybody knows any other additional information?

Thank you in advance.
Andrew.

I have 3 radios, 2 must go
one of the dualband icoms and the clegg 220 rockbound

both icoms are:
high power 50/35 (2m/440)rx AM airbands and well into the 170's
rx down to 420's and up into the 470's will do gmrs or frs recieve
(not t-a for xmit here) have manual, power and mic cords with dtmf
mike
the 2710h has dual recieve and crossband, the 207h is single recieve

the clegg is 220 rockbound (crystal) 10 watts with the calling

frequency installed (used for packet) have mic, manual, and power cord
(is attached)
dtmf pad on radio is nonfunctional aftermarket, but no problems with
the rig.

207h $200 shipped
2710h $275 shipped
clegg fm 76 $70 shipped

I can be reaced via email OR by phone ONLY
email is kevtis@hotmail.com
phone is 8176773078 (after 7pm)

thanks for your interest

I just got an Icom IC-R7100 receiver. I used to have a Winradio
Wr1000i. Is there a software package out there for the Icom that is
as good or better than the Winradio software?

Thanks for any help!

So I picked up this 2100 for cheap - apparently someone tried to mod it, and wasn't so sucessful. The on/off switch doesn't work anymore - if you plug in the radio is just pops on automatically.

Anyhoo - I found the component removed (where it goes, not the actual component), but I'm not entirely sure what it was. The component he was supposed to remove to sucessfully finish the mod was right next to it (to the left) and was a diode and is clearly labeled on the pc-board (with the familiar ->- like symbol).

While searching around I found this lovely site full of schematics, but it was lacking the one I needed
http://krasnodar.online.ru/hamradio/sch_eng.html - they also have lots of manuals.

The mod they tried to perform is right here -
http://www.mods.dk/mods.php3?radio=icom&model=ic-2100&selectid=310#310 .

Unfortunately there's a lot of idiots working on these things. Why they didn't put it back together after they discovered it wasn't working properly is beyond me.

Can anyone help? I wouldn't mind restoring this back to its factory settings...

Thanks!

Michael Jantzen ^_^ N7WSB

How about renting a cabin on an organic farm in Eastern Ontario surounded by forest? Modern, high gain ham antennas in a very low noise environment. Free vegetables in season and fresh eggs every day. Absolute peace and quiet. By the week. Check out my web site.

FS: Ten Tec Triton 540 with the vox supply, cw filter, noise blanker, and
manuals. Radio went back a year ago and had pto rebuild, new drivers and
finals, and  alignment -cost $229.00. I also have the matching VFO (hard to
find). Its alot of  fun classic radio and in  good condition.. $400.00 and I'll
throw in a D104 and G stand too. Thanks fer the read-Lew KlNDV

I am just wondering if there is a place on the net where, I might be able to get a list of Canadian Amateur Radio email addresses. I know that it goes like callsign@rac.ca

Is there anywhere I can get a list of these.

also, American might be nice too, but for now I am just looking at Canadian

Thanks,

Well, telebart, are we feeling a bit negative today. If one does not wish
to listen to HF noise, then one can reach up and switch the rig OFF. The
noise level here is very low and not everybody gets to make contacts with a
3 element full size qubical quad on 40M. There are other things to do here
on the farm. You could have a Spock type mind meld with the chickens. You
could eat fresh grubs, listen to the birds or go for a walk in the bush.

VA3JQ

I have to agree, you would think . . . nah I won't say that it would just
give him ideas he doesn't already have. Oh well, I might as well be happy
that I haven't sent my dues of to RAC and set up my email yet :(.

Subject: Ham Radio for Electrical Engineers?
Message-ID: <20020224151628.18505.00000420@mb-mk.aol.com>
Xref: archiver1.google.com rec.radio.amateur:3160

I have a degree in Electrical Engineering. I decided to go to some ham radio meetings. Being interested in Electronics, I have found that the subject area is not what I was expecting. I know there are many different modes of operation. Is ham radio (or a subset of it) for me?

I go to these meetings and "Hams" talk about Ham politics, how they contacted someone. The meetings seem very boring. I went to more than one club and one of them seems to be the least boring than the others. No disrespect, but Hams and Ham radio seems to be boring. Hams talk about information technology (IT) more than they talk about radio or electronics. I am not interested in IT. I want to hear about Electronics. Most "Hams" I have met simply operate a radio and do not know about Electronics (other than antenna selection).

Hams seem to make a big deal about communicating over a radio. So what if town officials dont let you put up a tower. What is so great about Amateur radio? What is the challenge? If you like to communicate over a radio, why go to meetings about it? Is Ham radio a cult?

It seems that some "Hams" are interested in Electronics. There are artilcles in magazines such as QST of a technical nature. How do I find the technical Hams. Are some clubs more active in this area than others? I have not been to Field Day and this seems like an interesting activity. Are there other Ham Radio activities?

You will find hams are a most interisting combination of people. I have been a ham for about 30 years getting started around 22 years old. I had a good electronics background before then. Very few hams are interisted in the electronic part but just want to talk. At many of the meetings I have been to there is little electronic discussion but much as you have found them to be , political. Seems the ones that are into the electronic aspect do not go to meetings. We have a local repeater and everyone used to want to tell how to run it but almost noone wanted to help do the work. Even getting some hams up to the site to do some manyal work such as installing a new antenna or just trimming some bush and trees out of the guywires seem to be very difficult.

There are many tings you can do as you have found out from the technical articals . To find the technical hams you have to get on the air and start talking and asking. This does not usually mean the local 2 meter repeaters but the low bands. You did not state the areas you are interisted in. You do get the license to build and use the equipment that you want and to modify comercial equipment to suit your needs.

YOu can build almost any type of communication device you wish.

Does anyone know where I can download software which will generate code at a speed I specify from a text file. In other words, from a paragraph or two of text that I paste in from the clipboard.

Thanks, Pete KA�TZK

Subscribe to: rec.radio.amateur.homebrew for lots of technical discussion
about the design and construction of home made amateur radio equipment.

HELLO FELLOW HAMS;
I AM KB1GLJ IN QUINCY MA. MY PROBLEM IS, I HAVE AND MFJ DUAL BAND MOBILE MAG ANTENNA OUTSIDE OF MY WINDOW WHICH IS THE ONLY PLACE I AM ALLOWED TO PUT IT.
I PUT IT ON A METAL SHELF BRACKET WITH A NINE INCH SQUARE STEEL PLATE UNDER THE MAG. TROUBLE IS, I CAN REACH ALL THE REPEATERS IN THE AREA EXCEPT 446.575.
IF ANYONE HAS ANY SUGGESTIONS, I WOULD APPRECIATE IT. YOU WOULD HAVE TO E-MAIL ME AS I CAN NEVER FIND MY POSTS IN ANY CHATS I HAVE BEEN IN.
THANK YOU IMMENSELY, JIM (KB1GLJ)

I think you'll find all types in amatuer radio - some are interested in just being social (sounds like the club you visited). Some are interested in making contacts and collecting qsl cards.

Some like me - are interested in experimental stuff like sattelites, vhf/uhf/shf propogation and boring non-experimental stuff like cw. I wish I knew more about electronics like yourself - I'm a social studies graduate though :(- maybe some day :). Although I have done minor repairs, made lots and lots of cables and made several of my own antennas.

That could be true, or he could also be needing to contact some he may have had prior contact with. Or....

There has been a few cases where I did not have the opportunity to exchange an email address over the air, and it would have been nice to have a place to get that. I suppose more people should have their profile pages on Qrz.com filled out as that may be a solution.

You are probably right but I guess I always shoot for the underdog.

Ryan

Try searching for a program called Numorse. I think the site is something like www.Nuware.org or www.Nuware.com or something along these lines.

The program will read a standard text file and send it in morse code. It also can save the morse code in a .wav file which could be burned to a CD if interested.

Hmm, what kinda grubs we talkin'. By the way, whereabouts in Eastern
Ontario, I could just plug the call into the database but I am feeling a
little lazy and its late.  Besides, I really want to know about the grubs.
;)

Amateur Radio Newsline Report 1280 – February 22, 2002

Amateur Radio Newsline report number 1280 with a release date of Friday, February 22nd, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ultra-wideband is here and the fight to keep high power unlicensed devices off of 70 centimeters escalates. These stories are first on Amateur Radio Newsline report number 1280 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ALLOCATIONS: FCC APPROVES ULTRAWIDEBAND

The nation's communications regulators have approved limited use of a new technology that is actually capable of seeing through walls, finding disaster victims and even preventing car crashes. Known as ultra-wideband, is a new method of wireless transmission is being promoted as a potential solution to the squeeze on the nation's airwaves created by the explosion of mobile phone, pager and other wireless device usage. We have more in this report:

--

Ultra-wideband devices will for now operate only in 960 MHz and in the 1.99 to 10.6 GHz bands. In theory, at least, you should never even know that they are there. This is because proponents of ultra-wideband claim that interference to other spectrum users is virtually non-existent -- based on the ultra short duration and pulsed nature of the transmissions. And the Federal Communications Commission agreed when it voted unanimously about a week ago to allow the technology to be used on a limited unlicensed basis.

The FCC proceeded cautiously out of uncertainty whether ultra-wideband could coexist with other strategic services. In other words, it wanted to be certain that it would not cause harmful interference to military communications, cellular telephones and the Global Positioning System. So it only provided ultra-wideband access to a small portion of R-F real estate. None-the-less, the real-life implications of the limits of the FCC decision are far reaching.

Up to now the military has been the only ultra-wideband user. This FCC action will allow for wireless communications and accurate readings of location and distance that have a wide range of civilian applications. For the general public this includes wireless, high-speed transmissions over short distances. Possibly as a way of sending video from a camcorder to a television set or data from a personal digital assistant to a laptop computer. The technology might also include sensor systems in cars to alert a driver to movement near the vehicle. This could prevent collisions and promote smart air bag deployment.

Otherwise, the FCC has limited use of ultra-wideband technology to public safety. Only police and fire officials, scientific researchers, mining and construction companies will be permitted the use of so-called ground-penetrating radar devices. These would only be permitted to radiate straight down with little or no signal leakage in any other direction. The FCC notes that this system could help rescuers find victims in rubble following a disaster or locate ruptured underground pipelines without digging up entire neighborhoods.

The FCC severely limited distribution of ultra-wideband devices that can see through walls and detect motion within certain areas. Only law enforcement and firefighters will be permitted to have them. In other words, you won't soon be buying a home camcorder that can peer through your wall and into your next door neighbor's apartment. And you probably never will.

Right now the introduction of ultra-wideband will have very little impact on ham radio due to the limited spectrum being allocated to it. But it's use could be expanded in the future if it's proved not to interfere with existing military and public service communications.

For the Amateur Radio Newsline, I'm Robert Sudock, WB6FDF, in Los Angeles.

--

If ultra-wideband is successful it could eventually open up a whole new world of communications for ham radio. For starters, think in terms of so-called smart software defined radios. Radio’s that are so smart that you tell it who you want to talk to and it calls you when that person is ready to hold a QSO.

More on this emerging technology in future Amateur Radio Newsline reports.
(FCC and other published reports)

**

SPECTRUM SHARING: SAVI TECHNOLOGY VS. HAM RADIO

The fight to keep radio ID tags off the 70 centimeter ham band is entering the home stretch. This is because the FCC has set March 1st as the deadline for reply comments on RM-10051.

RM-10051 is the Rule Making designation given to a request from SAVI Technologies, Inc. As previously reported, SAVI has petitioned the FCC for it to be allowed to develop and market a family of Part 15 devices designed to operate on the amateur 70 centimeter band. These Radio Frequency Identification Tag devices would operate at a power level far higher than similar devices now marketed and that’s where the real problem with the proposal lies.

Ham radio educator Gordon West WB6NOA, is an expert in weak signal operations. West says that it will mean problems for weak signal and satellite operators:

--
WB6NOA: “I think that the presence of any strong; either continuous or intermittent signal near the weak signal portions of the [70 centimeter] band is going to dramatically cause interference to those of us that monitor for either weak signal beacons -- such as those heard on the West coast that come in from Hawaii -- or for those who operate weak signal SSB and CW satellite.”
--

West says that even some of the micro power Part 15 devices already sharing the 70 CM band are causing major problems:
--

WB6NOA: “Presently on the weak signal 70 centimeter band we are having to put up with low power, intermittent [home] weather stations. You know, those weather stations that you see advertised as transmitting in their data on 432 and 433 MHz. Even these weather stations when they transmit will cause the AGC in my receiver to pump and it takes two to three seconds before the AGC returns [to normal] before I can begin listening again for weak incoming beacons.

Those [transmitters] are just a few hundred milliwatts at about 300 to 500 feet away. You can imagine when these more powerful transmitters come on the air in the 70 centimeter portion of our Amateur Radio band.”
--

But exotic modes won’t be the only ones affected. There is more than ample reason to believe that FM repeaters, remote base and A-T-V operations could suffer as well. And with the reply comment deadline only a few days away Dick Isley, W9GIG, the Secretary of the National Frequency Coordinators Council says that an e-mail and fax campaign to congress may be the only way to get RM-10051 killed.

In an e-mail to the Amateur Radio Newsline and other Amateur Radio publications, Isley says that it is imperative that hams send electronic messages their elected federal representatives in opposition to RM-10051. Isley believes that if 10,000 or more hams respond to this call, the SAVI Technology proposal could become a political hot potato. Hopefully one that is so hot that the Commission drops it completely. (ARNewsline(tm))

**

SPECTRUM SHARING: THE ARRL VS. THE FCC ON SAVI TECHNOLOGY

As hams get ready to write e-mails to congress, the ARRL is following a different diplomacy. It is challenging the FCC’s authority in this matter saying that the agency 'cannot legally proceed with the rules proposed for unlicensed Radio Frequency Identification tags at 433 MHz. Jim Haynie, W5JBP, is the President of the American Radio Relay League:

--
W5JBP: “You have to go back and look at the Communications Act of 1934, as amended. What Congress said was that in equipment that puts out a signal at a certain level must be licensed. The FCC has said that they are going to make this a Part 15 device does not require a license.

Our [ARRL] argument is that they cannot do this by law. Congress would have to pass a law to allow them to make this powerful radiator a part 15 device. In other words, change the whole parameter of what Part 15 [devices] are.”
--

Haynie says that the League has said it will 'do whatever it takes to keep the FCC from putting these Radio Frequency Identification tags in the 70 centimeter band. You can hear more from President Haynie by tuning in right now to the RAIN Report. It in streaming audio at www.rainreport.com and on the phone at 847-827-7246. (ARNewsline(tm), RAIN, ARRL)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA2UGO repeater serving Mt. Beacon N.Y.

(5 sec pause here)

**

PUBLIC SERVICE: HAM RADIO AT THE WINTER OLYMPICS

Ham radio was a major player at the 2002 Winter Olympics. Not competing in the games, but working in support of overall security. Amateur Radio Newsline’s Norm Seeley, KI7UP, has more.

--

According to an ARRL bulletin, Amateur Radio volunteers assisted with security and were ready to provide back-up communication for the Winter Olympic games. According to Utah ARRL Section Manager Mel Parkes, AC7CP, a special public safety organization called the Utah Olympic Public Safety Command was created by the various local and national public safety organizations that provide the security necessary for the international event.

According to Parkes, Section Emergency Coordinator John Mabey, W7CWK, and Brent Thomas, AC7H, from the State of Utah Comprehensive Management Office began working on this effort over a year ago. Mabey, along with Davis County Emergency Coordinator Hall Blankenship, and several other hams headed up the effort to provide emergency backup communication for the Olympic Security Command. At its height the winter games the ham radio group numbered close to

200. These radio amateurs provided back-up communications with the ability to reach numerous Olympic venues 24 hours a day.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Parks had some nice words for the corps of Olympics communications volunteers. He said that the hard work and dedication by all these dedicated Amateur Radio Operators certainly contributed to a very successful and safe Winter Olympic Games.   (ARRL)

**

ENFORCEMENT: DON’T PLAY MUSIC ON THE AIR

The FCC has told three hams that they have been caught allegedly playing music on the air. In letters to the trio, FCC Rules Enforcer Riley Hollingsworth says that such transmissions are contrary to the Commission's rules regarding the Amateur Radio Service:

--

Hollingsworth: “We warned Ronald Marshott, N2NGY of Berkely Heights New Jersey, Frank Grzych W1FU of Johnston Rhode Island, Martin J. Bellingeri, W2OT, of Saddle Brook New Jersey and Zack Elliott K2BLU Haworth New Jersey about playing music on the 75 meter band.”

--

According to Hollingsworth the transmissions took place on 3.832 MHz on the evening of November 27, 2001. (FCC, RAIN)

**

ENFORCEMENT: FCC VS. K1MAN – CONTINUED

The saga of the FCC versus K1MAN continues. This as the FCC issues yet another letter to the Belgrade Lakes Maine ham. Among other things, this time the FCC is warning not to put phone recorded calls on the air. Riley Hollingsworth, is Special Counsel for Amateur Radio Enforcement the regulatory agency:

--

Hollingsworth: “We sent a combination warning letter and explanatory letter to Glen Baxter, K1MAN, of Belgrade Lakes Maine concerning deliberate interference, lack of station control, sending felony complaint affidavits to those whom he perceives were interfering with him; tape recording telephone conversations without permission and broadcasting them.”

--

In its letter the agency warned that it is also important for K1MAN to understand that if these matters are not resolved, his ham licenses will not be routinely renewed the next time he applies. Instead Baxter's licenses will be designated for hearing before an Administrative Law Judge. In such a proceeding, the FCC says that Baxter would have the burden of proof to show that his licenses should be renewed. (FCC, RAIN)

**

ENFORCEMENT: ILLEGAL CORDLESS PHONE SELLER FINED

Remember those high power cordless phones that we reported on a few months ago. The ones found operating in the 2 meter and 220 MHz Amateur bands? Well an alleged source of some of these illegal devices has been told it will have to pay a hefty fine for selling them here in the United States.

On October 23, 2001, the Commission issued a Notice of Apparent Liability for Forfeiture in the amount of $7,000 to Electronics Unlimited of Miami Florida. This, for allegedly marketing of a non-compliant high-power cordless telephone called the Alcon AT 526.

The company was afforded ample time to reply to the allegations. The FCC says that Electronics Unlimited never did file a response. Based on the information before it on February 15th the FCC affirmed the forfeiture order and gave Electronics Unlimited 30 days to pay. If the Electronics Unlimited fails to pay the forfeiture within the specified period of time the FCC says that the case may be referred to the Department of Justice for collection. (FCC)

**

FM AND REPEATERS: UNYREPCO NEW MID VALLEY NY REPEATER COORDINATOR

Repeater owners and operators of other F M and packet relay devices in Orange, Putnam, and Sullivan counties in York State have adopted the Upper New York Repeater Council, Inc. to provide frequency coordination services. This was an area originally represented by the long defunct North East Repeater Association that went belly-up in the early 1970's. It then used the services of the Tri State Amateur Repeater Council until that organization disbanded a few years ago. Since then the region has been on its own.

This process of the Upper New York Repeater Council adopting the region was completed following a review of the existing systems by the established and recognized adjacent region frequency coordination councils. The change became effective February 13th.
More information is on the available on the web www.unyrepco.org (UNYREPCO)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

EMERGING TECHNOLOGY: SURFING AT 39000 FEET

The Federal Communications Commission has granted Boeing a license to provide high-speed Internet service to airline passengers. Boeing said the FCC approval clears the way for its planned in-flight Internet service called Connexion. Connexion -- Spelled C-O-N-N-E-X-I-O-N -- will enable airlines and other commercial jet operators to offer real-time, high-speed Internet and intranet access, television and e-mail. This, while flying over United States territory and waters. (Boeing)

**

HAM RADIO IN SPACE: A TEACHERS GUIDE TO ARISS CONTACTS

Tony Hutchinson, VK5ZAI, says that he has updated his web site with a "Teachers Guide" for schools that have been selected to speak with the crew on the I-S-S. On his pages, Hutchinson provides what amounts to a final check list of things that must be done in the weeks prior to the contact taking place. Also posted is a list of the actual questions that students have asked in the past.

Tony Hutchinson is the Amateur Radio on the International Space Station Coordinator for all of Australia. To find his very interesting resource, take your web browser http://www.electric-web.org/teachers_guide.htm. (AMSAT-NA)

**

INTERNATIONAL - SOUTH AFRICA: SARL READIES FOR WRC 2003

The Independent Communications Authority of South Africa has invited the South Africa Radio League to participate in the preparatory work for the World Radio Conference in 2003. SARL President Hans Potgieter ZS6ALJ will be joining I-C-A-S-A sub-committee 4 which is tasked to develop South Africa's position on Maritime mobile, Amateur and Amateur Satellite, and broadcasting services in the Medium Frequency and High Frequency bands. A number of specific amateur related items are on the W-R-C agenda, including the realignment of amateur and broadcasting allocations around 7 MHz, and possible revisions to articles S-1, S-19 and S-25 of the international radio rules. (SARL, Q-News)

**

CONTESTS: VHF SPRING SPRINTS

Attention VHF and UHF contesters. K4AR has announced over the VHF Reflector that the VHF Spring Sprints will be held again in 2002. The Sprints are sponsored by the East Tennessee DX Association. The dates, official rules and lots of other information can be found at www.etdxa.org/vhf.htm (VHF

Reflector)

**

DX

In DX, 9V1YC reports that the 2002 South Sandwich and South Georgia DXpedition is now officially over with all operators are back home safe and sound. 9V1YC says that the DX-pedition achieved all of its goals and made an astounding 70,428 QSO's using SSB, CW and RTTY. On-air time was 80 hours at VP8THU, and 7 days, 10 hours at VP8GEO. (RSGB)

And husband and wife K1CN and N1EBL are in the Bahamas and signing C6AMM and C6AWW from now until the 2nd of March. Operation is from Harbour Island, which counts as Islands on the Air number NA-001. (RSGB)

**

THAT FINAL ITEM: HAM RADIO SEARCH AND RESCUE

And finally this week, ham radio played a big role during a simulated emergency that takes place in a somewhat unusual setting and at an unusual time. From Birmingham, Alabama, Newsline's David Black, KB4KCH, reports:

--
Most emergency drills take place during the day, maybe in a parking lot or open field. But volunteers in Alabama put on their jackets and hiking gear and grabbed their flashlights for an exercise near Birmingham February 8th. The setting: Oak Mountain State Park, Alabama's largest park with 60-thousand acres and dozens of miles of trails. Members of the Vulcan Trail Association practice what they might have to do for real. James Pilman, KA4ZQA, is event coordinator:
--
PILMAN
BITE IN This is a search
OUT a couple more
--
Pilman assembles teams of experienced hikers teaming with amateur radio operators.
--
SOT1 IN Earl
OUT you're goin' out.
--
This search takes place at night. With temperatures in the 40s, three teams head out into the wilderness, maintaining a 2 meter contact with a Net Control at the park headquarters. Team members get a briefing on their missing person.
--
SOT2 IN There's a gentleman, he's about 28 years old
OUT at the marina
--
The sky is full of stars as teams walk up and down trails, looking for evidence of their target.
--

SOT4 IN We're starting out on the trail
OUT W4CUE
--
After about an hour and a half, one team finds its man and radios back in. The net closes, but only after each team arrives safely back at headquarters. Kenner Morrow is a naturalist with the Park:
--
BITE/KEENER IN The value is being able to coordinate
OUT there are any emergencies.
--
Ken Moore AB4WL, provided communications for one team. He calls it a rewarding experience.
--
BITE/MOORE IN Just bein' able to help
OUT participate and volunteer.
--
For Chuck Arthur, KF4SSX, tonight's exercise was his first search and rescue practice:
--
BITE/ARTHUR IN To me as an amateur
OUT into ham radio
--
In the past, these hikers and hams have helped search for missing adults and children during real emergencies, sometimes dealing with extreme cold and the hazards of rugged terrain at night. Tonight's drill went just about flawlessly. The people who took part in this event know they might get called again for real -- this night in the cold wilderness has helped them to be a little better prepared.

From Oak Mountain State Park, Alabama, I’m David Black , KB4KCH, for The Amateur Radio Newsline.

--

David says that the trail group usually holds two lost hiker searches every year.   (KB4KCH, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). More information on contacting us is available at our only official website located at www.arnewsline.org.

Before we go a reminder from the ARRL that the deadline for nominations for the Hiram Percy Maxim Award is March 31st. Nominees must be age 21 or younger and hold a valid Amateur Radio license. The winner will receive a $1000 check. Full details are on the web at www.arrl.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

TRADE: MOTOROLA UHF ASTRO SPECTRA
Trade complete UHF ASTRO SPECTRA for mint HF receiver 51J4/R388 or
R390A. Your trade item must be fully operational (no "retirement
project") and cosmetically near-perfect. In trade I offer a Motorola
T99DX ASTRO SPECTRA with options:
G241 ANALOG (can be flashed to digital, encryption, etc.)
158W (UHF 450-482 MHZ 110W)
G48 CONVENTIONAL
Unit is complete with drawer unit, tray, power and control cables, W9
control head, speaker, palm microphone.
I pay freight to ship FEDEX/insured to you, you do the same to me.
For more info, pix, etc., please email dt0124@home.com

i have a 706 mrk ii as well and didnt know there was such a thing as a cloning cable for it
in the list of accessories it lists the civ-17 to control the radio but no cloning cable it would be very nice if there was such a thing would make programming this thing a lot easier

It's useful not to have Win 9* load automatically when the autoexec.bat
and config.sys files have been executed. To do this, merely change one
line and one character in the MSDOS.SYS file (root directory) to read:

```
BootGUI=0
```

The last character is a zero.

To load Windows one merely enters WIN<enter> at the DOS prompt. Just
like the old days. Nothing really changes.

Are there any owners of the Drake R8B that are using a high quality
indoor antenna and still getting good reception,dx, etc? I am seriously
thinking of getting the R8B , but am not allowed to erect any type of
outside antenna. i would appreciate any comments in this regard.

Aprspoint is available as a complete solution now, with MapPoint 2002 included. Aprspoint is an implementation of the latest APRS standards, and MapPoint offers high quality detailed street level coverage for North America and Europe. Now you can get both and do APRS in addition to address searching, route planning in one integrated interface. The package is very affordable, Aprspoint Plus MapPoint 2002 costs $129.90. And first 500 orders get an additional $20 off!. Check out the details at www.aprspoint.com.
Thanks.

You may find that it does not make such a good transmission line!

The wire used in transformers is soft drawn copper, meant to be wound in tight turns as in a transformer. What would be used for a transmission line or antenna is hard drawn copper or copper clad steel, which is stiffer and not suitable for tight windings.

If you want to save money there are two things you can do. Go to a local welding shop and ask if they have any copper coated welding wire that has started to corrode, and ask if they want to get rid of it.

Another cheap wire is electric fence wire. Go to a local farm suppy store or rural hardware store. There is both steel and aluminum wire available.

Jim

This is not entirely true! We have a 1.2 system in Los Angeles that covers the entire Los Angeles area with only 2 repeaters linked together. We have HT coverage in the entire LA area. Of course some areas are a bit scratchy but mostly very good coverage.

Any HT (Handy Scratchy) will always be limited in range but when designed right, it could go a long way. 1.2ghz is a relatively quiet band.

I'm not an old fart, Don't hear much complaining at all. Love chasing DX, and highly recommend the ICOM 718. Why buy just a reciever. Additonally, You don't need real Estate to get on the air. I worked Russia, Australia, France, Spain, China, and tons of Japan with a 33 Ft piece of wire going straight up with 100 watts.

73

I am looking For Schematic or Manual for a - 70 CM  PD-ATV-50 PAULDON
 or, and old broshures.
 and any info about the bricks, Amps   -M67728   or  M67705M
 Where can they be purcased how much they cost.. I have digital
 pic if you need more info

  Thank you

What's the best way to go for a general purpose 2 meter ham radio antenna
for my house. I could put on on the outside or chimney or maybe in my
attic.

hey tom
in my opnion the best vertical is the comet GP-9 its a dual band 2/440 and on
2 meters it has a reported gain of 8.5 and on 440 its 11db
that antenna should do you very well at 30 feet or so in the air
good luck

Well, I use a touble trombone (about 12 ft long, I think) up about 40 feet for general purpose use, and an 11-element yagi for those times when I need a little extra "oomph" on receive and transmit...   Oh yeah, got a 1/4 wave ground plane I use for packet...   Of them all, I'd have to say that the tall vertical is a good, general, all-around use antenna...

Amateur Radio Newsline™ Report 1277 – February 1, 2002

Amateur Radio Newsline report number 1277 with a release date of Friday, February 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The President of the United States speaks to hams in Florida and is ham radio seeing a second Solar Max? These stoies are first on amateur Radio Newsline report number 1277 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: PRESIDENT BUSH COMES TO HAM RADIO

The President of the United States has come to ham radio. Bill Burnett, KT4SB, has the details:

--

President George W. Bush has taken to the ham radio airwaves. This, to thank the Florida Amateur Radio community for being ready to serve the public when it is needed.

The President’s comments were made during a stopover the morning of January 31st at the Volusia County Fire Services and Training Center near Daytona. Around 9:15 AM Eastern Time, President Bush checked in to the Northern Florida Amateur Radio Emergency Service Net on 3.950 MHz using a portable station set up John Schmidt, AF4PU. Then the President made these remarks to the 40 or so stations listening to the net:

--

President George W. Bush:

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency. I also want to assure you that your Federal government is doing everything we can to make sure that there is not an emergency--starting with unleashing the mighty U.S. military overseas to bring evil ones to justice. But should there be a need for a response, I want to thank you all for helping our communities be prepared. And finally, I want to tell you--we are lucky to be Americans and may God continue to bless this great land of ours. Thank you very much."

--

Needless to say the net members were delighted to have the President of the United States address them. More important, hams nationwide can now be sure that President Bush knows that Amateur Radio operators are ready to serve whenever he, and the nation, needs to call on them for help.

In Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The complete story is on the web at http://firstcoastcommunity.jacksonville.com/northfloridaamateurradiosocietynofars (Tnx NU4F, CQ Magazine)

HAM RADIO SCIENCE: TWO SOLAR MAXIMUMS THIS SEASON

In case you are wondering why the current solar cycle is still providing such amazing VHF and UHF DX, one researcher may have the answer. He says that the current cycle appears to be having a second peak and that this is really not very unusual. Henry Feinberg, K2SSQ, looks at the scientist and his latest data.

--

The most recent and ongoing Solar Maximum -- or Solar Max -- theoretically crested in mid-2000. Sunspot counts were higher than they had been in 10 years, and solar activity was intense. One remarkable eruption on July 14, 2000 caused brilliant auroras as far south as Texas. But after that, sunspot counts slowly declined and the Sun was relatively quiet for month-long stretches. Most scientists said that the Solar Max was over. But was it?

Now, as 2002 unfolds, the National Aeronautics and Space Administrations solar foorecasters say that it looks as if the Solar Max is back with us again. The Sun is again peppered with spots, eruptions are frequent and hams notice that the VHF DX keeps rolling in.

Why is this happening? Well David Hathaway, a solar physicist at the NASA Marshall Space Flight Center in Huntsville Alabama has one theory. Hathaway says that the current solar cycle appears to be double-peaked, and the second peak has arrived.

--
Hathaway Audio Here
In-Q: We have seen other cycles...
Out-Q: ...define this maximum
--

Scientists track solar cycles by counting sunspots and Hathaway is an expert forecaster of sunspot numbers. He says that sunspot counts peaked in 2000 some months earlier than we expected. He says that the subsequent dip toward solar minimum seemed premature and before long, sunspot counts reversed course and began to climb toward a second maximum that now appears to be only a few percent smaller than the first.

--
Hathaway Audio Here
In-Q: Its a bigger than average...
Out-Q: ...smaler than 19, 21 and 22.
--

Hathaway notes that there is a widespread misconception that solar activity varies every eleven years like a pure sinusoidal wave. It isn't. He says that solar activity is chaotic and there can be more than one peak in any given period. Translated for ham radio: Enjoy the VHF DX while you can.

For the Amateur Radio Newsline, Henry Feinberg, K2SSQ.

--

Hathaway says that the Solar Max eleven years ago was much the same as this one. The first peak arrived in mid-1989 followed by a smaller maximum in early 1991. And if you are interested in hearing more about this interesting phenomena from David Hathaway its as easy as taking your web browser over to www.rainreport.com. Or you can call on the phone to area code 847-827-7246. (NASA, RAIN)

**

HAM RADIO IN SPACE: HF ANTENNA INSTALLED ON ISS

High Frequency ham radio operations from the International Space Station could be on the not to distant horizon. This, after a successful space walk on January 25th to install another antenna on the orbiting outpost. Amateur Radio Newsline's Roy Neal, K-6-D-U-E, has the details.

--

The spacewalkers have had another good day in space. On Friday the 25th of January, Cosmonaut Yuri Onufrienko, RK3DUO and Astronaut Dan Bursch, KD5PNU, successfully mounted a second ham radio antenna near a docking port amidships on the International Space Station. It is made of flexible tape and is similar to but longer than another antenna installed on January 14th. That one tunes both VHF and UHF frequencies. The new antenna will tune HF frequencies.

ARISS Board Chairman Fran Bauer, KA3HDO, says it definitely will work on ten meters and may even be made to work on 15 and 20 meters. BUT right now there is no gear on board to handle those frequencies. Experiments using the lower frequencies are on the list of futures for ARISS but no timetable has been assigned to design and build them.

Owen Garriott, W5LFL, the first man to operate ham equipment in space, once prophesied that a five watt transmitter in orbit might well be heard simultaneously world wide. The great number of hams with good stations on the lower frequencies also makes them enticing to ARISS. It's a safe bet that serious consideration now is being given to expedite such a project. Once a station is sent up, the antenna will be waiting.

The new antenna is the second of four to be installed on board the space station. No timetable has been announced for the final installation. All of these amateur antennas were built by Italy, tested and qualified in the US, to fit ports built by Russia, as befits the international nature of the ISS.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

Installation of the 2.5-meter long flexible tape antenna involved not only the mechanical deployment but routing cables and establishing the R-F connection as well. (ARISS)

**

HAM RADIO IN SPACE: THAT ANNOYING SATELLITE IS OFF 2 METERS

An annoying mystery satellite transmitting AFSK, frequency modulated Morse on 144.100 MHz for several days has been identified. It turned out to be a signal from the MAROC-TUBSAT satellite. This is an Earth-sensing spacecraft owned by a Moroccan government agency called he Royal Center for Remote Sensing. It was placed into a polar orbit by a Russian launcher on December 10, 2001.

As soon as he learned of the interference to amateur operations, Professor Udo Renner of the Center had the 144.100 MHz transmitter turned off. He then notified AMSAT Germany that TUBSAT was no longer on two meters.

But TUBSAT also has a downlink at 436.075 MHz. This system is only busy over North Africa and Europe and only when the control stations in Rabat and Berlin are activated. It has not been heard elsewhere in the world. (AMSAT-NA)

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Pentucket Radio Club repeater serving Groveland Massachusetts

(5 sec pause here)

**

SPECTRUM PRESERVATION: ARRL SAYS IT WILL FIGHT TO KEEP RFID OFF 70 CM

The ARRL says that it will go all the way to protect the 70 centimeter ham band from a threat brought by commercial interests. At issue is a plan from SAVI Technology and already tentatively agreed to by the FCC to deploy unlicensed transient R-F identification tag transmitters operating between 425 and 435

MHz. These tags run at much higher field strengths and duty cycles than Part 15 rules now permit.

According to a League bulletin issued on January 29th, ARRL officials have already met with members of the FCC staff as part of the League's effort to stave off a band threat. The bulletin says that General Counsel Chris Imlay, W3KD, and ARRL Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers January 14th outlining the opposition of the ham radio community. (ARRL)

**

FCC: CHAIRMAN POWELL HOME AFTER HOSPITAL TESTS

Federal Communications Commission Chairman Michael Powell was discharged from the hospital on Friday January 25th. This, after a two-night stay in the to undergo tests because of a lingering stomach bug.

Stomach discomfort caused him to cancel appearances at the Consumer Electronics Show in Las Vegas on January 8th and again at the annual conference of the National Association of Television Program Executives on Wednesday January 23rd. Doctors advised precautionary tests that required overnight stays at Walter Reed Army Medical Center in suburban Washington. (Published news reports)

**

ENFORCEMENT: THAT SONG WAS NOT AS BAD AS WE THOUGHT

The Federal Communications Commission has dropped an indecency fine against a Colorado radio station. KKMG FM of Colorado Springs had been fined seven-thousand dollars for airing the edited version of Eminem's "The Real Slim Shady." This, after a listener wrote the regulatory agency to complain.

At the time the fine was issued federal regulators said the edited version still included some expletives and references to violence and graphic sex. But the FCC now says it has reconsidered. It now says that the lyrics in the edited version didn't violate its rules by being "patently offensive." (FCC)

**

RESCUE RADIO: BRAZIL RADIO OPERATORS HELP IN POWER OUTAGE CRISIS

A major electricity blackout hit at least five Brazilian states on January 21st, and it was hobby radio enthusiasts that let people know about it.

The blackout, which began at 1:30 p.m., hit hardest in the industrial southeast and the major cities of Sao Paulo, Belo Horizonte, Rio De Janeiro, Goiania, Vitoria and the capital, Brasilia.

According to news reports, Brazil’s National Energy Agency blamed the outage on transmission line failures. The same news report credited Brazilian hobby radio operators as informing authorities that subways in Rio De Janero and Sao

Paulo were halted and that traffic lights were out snarling commuters in several areas.

The outage was caused by a failure at the Itaipu hydroelectric station in southwestern Brazil. A power-line failure caused thirteen of the dam's eighteen turbines to stop, cutting off nearly 20 percent of the country's energy. Power was restored about three hours later. The news story did not identify the radio operators as being hams. (Various shortwave news reports)

**

RESCUE RADIO: NEW INTER-JURISDICTION RADIO SYSTEMS BEING INTRODUCED

Santa Clara County California, police, fire and emergency medical personnel have never been able to communicate with one another at the scene of a major disaster. This is because each agency uses a separate radio system. That is expected to change this year.

Santa Clara County will be leading the nation in using new digital radio technology to solve the inter-agency communications problem. The new system will allow up to eighteen participating jurisdictions in any county to talk to one another instantly.

By way of example, once the system is up and running, officers involved in one of California’s famed high-speed car chase will be able to talk directly to police in the neighboring jurisdiction as the suspect approaches that town. They won't have to switch channels or go through dispatch centers. This means less time wasted and the probability that lives will be saved.

While Santa Clara county is at the head of the pack in adopting this new digital communications technology, the same news reports say that and Washington, D-C is not far behind. (Cal-State Info.)

**

PUBLIC RELATIONS: A CHEAP SATELLITE

A Cheap Satellite is the name of an Associated Press item that highlighted the work of the faculty and students at the United States Naval Academy in the development and launch of the P C Sat ham radio satellite. The story tells how the twenty-five pound bird was built using off the shelf products including a tape measure for its antenna and rechargeable double A cell batteries for power.

The story was written by Tom Stuckey and moved on the wire on Wednesday January 23rd. It noted that PCSat, was the 44th amateur satellite put in orbit. It is one of more than a dozen built by university students around the world. (VHF Reflector)

**

CONVENTIONS & HAMFESTS: ORLANDO HAMCATION WEAK SIGNAL FORUM

The Orlando HamCation will host its first ever Weak Signal VHF and UHF forum. Beginning at 2 p.m. on Saturday Ferbruary 9th, the one hour session will be moderated by N2CEI, of Down East Microwave. Also, Tom Haddon, K5VH, will be on hand to motivate more Florida hams to become active on the Microwave bands.

If you are in the Orlando Florida area on February 8th to the 10th drop in on the Orlando Hamcation. For more details and or advance reservations, go to oarc.org/hamcat.html on the World Wide Web (W2BZY)

**

CONVENTIONS & HAMFESTS: DATE CHANGE FOR RADIOFEST 2002

Brian Broggie, W6FVI, asks that we pass along a date change for RadioFest 2002 sponsored by the Naval Post Graduate School Amateur Radio Club in Monterey California. The new date is February 23rd. More information is in cyberspace at k6ly.org/radiofest. (W6FVI)

HAM RADIO SCHOLARSHIPS: THE DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is one of three ham radio organizations seeking nominations for its scholarship program for the 2002-2003 academic year. According to DARA, applicants must be graduating high school seniors in 2002 and hold any class of an FCC issued mateur Radio license. The scholarship awards run up to $2000, as determined by the scholarship committee. Money must be used toward tuition at an institution of higher education.

To obtain an application, send a self-addressed, stamped envelope to the Dayton Amateur Radio Association Scholarship Program, 9873 Lower Valley Pike, Medway, Ohio 45341. You can also obtain an application by e-mail to n8emo1@msn.com. Completed applications must be postmarked no latter than June 1st to be eligible for this years scholarship program. (DARA)

**

HAM RADIO SCHOLARSHIPS: THE FOUNDATION FOR AMATEUR RADIO

Another organization offering scholarships to hams id the Foundation For Amateur Radio. The Washington, D.C. area group will administer sixty-two scholarships for the academic year running from 2002 through 2003. Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (Foundation For Amateur Radio)

INTERNATIONAL - SOUTH AFRICA: SA RADIO AMATEURS OF THE YEAR NAMED

Turning to international news, South Africa is honoring two of its own as that nations Radio Amateurs of the Year. Q-News Graham Kemp, VK4BB, brings us the details:

--

The South African Amateur Radio Development Trust have announced the winners of the 2001 Siemens Radio Amateur of the Year Award. This award is made annually to a Radio Amateur who has made a major contribution to the Amateur Service either on a technical or development basis in ZS land.

The award has been bestowed jointly on Bradley Phillips, ZS5BP, and Garth Wilson, ZR6CY. ZS5BP for his work on the introduction of Iphone and the development of the Internet Radio Linked project. ZR6CY for his continuous efforts to develop communication skills amongst the youth. He has to date presented no less than 80 camps for Voortrekkers to learn the Morse code and basic communication skills.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

This award is considered as South Africa's equivalent to the Dayton awards presented here in the United States. (SARL News, Q-News)

**

INTERNATIONAL - UK: KENWOOD TROPHY AWARDED TO G3XWH

Meantime, over in the U-K, Richard Horton, G3XWH, who chaired the RSGB's Future Licensing and Examination Forum has been awarded the Kenwood Trophy. This, for his significant contribution to training and development in amateur radio.

Horton recently retired from the Radio Society of Great Britain's Board where he was responsible for amateur radio development. His committee was responsible for much of the work that went into the creation of the new U-K Foundation Class license. (GB2RS)

**

DX

In DX, DJ4KW and DK9GG are currently active from Belize as V31YN and V31GW, respectively, through early February. Activity is on CW, RTTY and PSK 31. (RSGB)

And IN3QBR will be active from Vientiane as XW3QBR until the 31st of July. He will be joined, from the 20th of April until the 10th of May by IN3ZNR operating as XW3ZNR. (OPDX)

And R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28MHz with 100 watts to an R6000 vertical. For all three QSL as directed on the air. (RSGB)

**

THAT FINAL ITEM: CELEBRATING THE LIFE OF ED CLEGG W2LOY

And finally this week, if you were on the VHF bands in the 50's, 60's and 70's then the name Clegg Labs touched your ham radio operations. And as we hear in this report, the family of the man behind the gear is inviting you to help celebrate his life.

--

Even if you did not own any Clegg gear, the chances are that you talked to someone on the air who did. Whether it was the top of the line Interceptor receiver and Zeus transmitter or the entry level 99'er transceiver, it was easy to spot a Clegg signal by its almost overpowering modulation that seemed just right for the R-F carrier it was on.

Almost every product that carried the Clegg label was designed by the company's founder Edward T. Clegg, W2LOY. When he moved the company to Pennsylvania in the 1970's, Ed took the call W3LOY. Likewise, after retiring to Ohio he traded the 3 for an 8, but kept the famed L-O-Y suffix.

And regardless of the call area, Ed Clegg was first and foremost a communications designer well ahead of his time. Even more important, he was a positive influence on just about everyone with whom he came in contact.

Ed Clegg left us last September at age 80. Now, his wife Martie will be hosting a gathering in March near the Clegg home in Lancaster Ohio. The purpose is to celebrate the life of Edward T. Clegg. And they are asking you to help.

Martie, her daughter Linda and Linda's husband Rob MacGuffie, K2HZN, are asking anyone who knew Ed to share in the celebration. They know that most of you won't be able to be in Lancaster Ohio on March 30th. But some of you do have memories, stories, photos and other Ed Clegg memorabilia that would help to make this day even more unforgettable.

If you have something to share, please contact Linda and Rob before the end of February. Their address is 70 Province Road, Gilmanton New Hampshire with a zipcode of 03237. Rob's cyperspace address is K2HZN@yahooo.com.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

By the way, a number of us here at the Amateur Radio Newsline began our ham radio careers using gear designed by Ed Clegg. In fact, our producer Bill Pasternak, WA6ITF, got to know Ed while Bill was still a teenager operating A-M on the 6 meter band. (Clegg family)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm ______________ saying welcome to the year 2002, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

It depends entirely upon what you mean by "best". Probably the "best" would be a full commercial antenna tuned to the ham bands, such as a super staionmaster. That will cost you in the several hundreds of dollars - close to a thousand. Or perhaps a Decibal products folded dipole array - again well over $500, but can be configured for omni or somewhat directional patterns based on your needs. Both have incredible survivability in severe environments, which may not be a consideration for you. You will find many ham repeaters use these types of antenna's; they have learned from experience it pays in the long run to spend more up front and get something that will last 15 or 30 years.

If you've got the money, go for the best. If you're stuck with a budget like most of us, I've had reasonably good results from Diamond and Comet.

Carl.

I use the big diamond, but stay away from chimneys if they are being  used.
The gases are corosive and depending on circumstances can still be pretty
hard on connectors 4 or 5 years after the chimney was last used.

Hello there,

I hope someone can give me a few pointers to get started. Here is what I am looking to do.

I would like to setup a link that can operate at 56kbps minimum (would prefer something like 400kbps) - at a range of 5-10 miles.

The end result is a semi-mobile laptop computer connected to my home/office LAN from distances up to 10 miles.

Any help would be greatly appreciated.

Thanks!
Christopher

I have updated my Radio Merit Badge webpage for the new requirements. In short, Morse code contacts are no longer required, only 8 schematic symbols are needed, and the requirements have been updated to eliminate references to the Novice license.

Bill Jeffrey AA6J
www.qsl.net/aa6j/radiomb

Feel free to use any of this information in your merit badge classes, but please don't repost to another web site.

Hello All;

I live an a development in California that has CC&R's, restrictive to all types of external antennas, including satellite dishes. I need to erect an antenna to use with my amateur radio, and I was wondering if anyone else went up against CC&R's with an antenna, and what was the ending result. CC&R's are part of every new development out here; you can't buy a new house without them, effectively eliminating amateurs from operating. My CC&R's are not even linked to a homeowners association, so I am wondering how enforceable they are.

Any comments or suggestions are appreciated.

James

hey dont let them BS you there are many ways to play radio with out them even
seeing an antenna check your restrictions and if you can have a flagpole you can
make one out of PVC pipe and hide a multiband HF vertical inside of it
or you can string a wire around the roof line of the house telling the housiung
nazis that it is an antifungal strip what do they know...grin just buy a bunch
of those 1 inch stand offs from radio shack and string the wire thru them and
then run it into the house to a tuner
there are also ways to play VHF/UHF there is a weathervane antenna as well as
the ventenna so you can play it just takes a little effort and thought
or move...grin
good luck

Verticals don't seem to work (crappy soil conditions, and I don't have room for radiators. All houses in the area are two story houses, so I really want to get the antenna above them also. I also have a nice beam that I want to put up. I just want to try to buck the system, and wanted advice on it. If it doesn't work though, I certainly will try the stealth approach.

TNX.

A CC&R is a legal contract that you signed and agreed to. It is enforceable just like any other contract - especially in the People's Republic of California. But, like any other contract, if you have enough time and money you might be able to obtain some type of compromise or variance.

(Actually, there are a lot of houses in CA without any antenna restrictions - depending on where you want to live. When I bought my last house I saved myself a lot of grief by telling the Realtor that I was only interested in looking at houses that did not have any anti-antenna CC&R's or local ordinances. And before I signed the purchase agreement, I had this fact stipulated in the disclosure documents)

However, if you have an attic that you can string a dipole up in, you can still get on the air. It won't perform like a yagi at 80 feet, but you can still work the world with 100 watts...

Good Luck,

73 de W6DKN

---------------------------------------------------------

They know that if it really is an antenna, you could be in big trouble.

Read the CC&R's very carefully, including the part about you paying
attorney's fees and penalties.

Best to use an indoor antenna.  Properly done, they work quite well.

Check the ARRL site first. They have a lot of current information and even have a book on the subject. There is also a federal law that says they have to "make reasonable accommodations" for your antennas. It may take a court fight to make them comply.

Look around the neighborhood for other antennas. 8 Ft dishes in front yards or 100 ft CB towers may mean they are not enforcing the CC&Rs. Read your CC&Rs! This month's QST has an article about a ham that won!

Thanks guys. It seems to me that the CC&R's have been "abandoned" in my area
(at least that is what my argument will be), based on the fact that they are
not enforcing the ban on satellite dishes, cars parked in the streets,
basketball hoops left in the street, odd window decorations, etc. They can't
be selective about only enforcing my violation.

James

Hello, we have the following HF amplfiers available, all require 13.8 volts, DC, need 25 watts in for full output, have three power levels, and a switchable +25db receive pre-amplifier. They are designed after the older Palomar Electronics units when they were in business.
Check out or web page at: http://www.geocities.com/hamsupplies/index.html
Palomar 250: 169.99

Palomar 450: 269.99

Palomar 600: 399.99

All come with a one year warranty, and shipped to your door. We are a PayPal verified user.

This does not apply to CC&Rs - only to local/state laws and regulations.

> Look around the neighborhood for other antennas. 8 Ft dishes in front
> yards or 100 ft CB towers may mean they are not enforcing the CC&Rs.
> Read your CC&Rs! This month's QST has an article about a ham that won!

It would be nice if the courts were consistant in such rulings. But
this is the first, if it is indeed about beating some CC&R.

That is exactly true. Either they all have to be enforced - or none can
be enforced. Of course, you might have to spend a bunch of money in court
to get relief.

Hi

Just got an Yaesu FT230R. Yes, it's old I know, but it's working.

But I have no manual, schematic or service manual.
I tried to search the www, but very little information is available on this station.

It is possible to get a manual from one selling this information, but last time I tried this kind of service, I've got a very bad copy, and in addition my VISA account was abused. (Only few GBP, but as it was the first and only time this VISA was used, I find it quite interesting)

So, is there somewhere to download this ?
Or find any other information. ?

Gawd Russell will sow the pear, and if Sara globally opens it too, the
lentil will talk in front of the cold lake. Some powders irritate,
burn, and laugh. Others weekly like. She might believe closed

jugs near the open dark rain, whilst Maify tamely changes them too. It will cook once, love surprisingly, then kill beside the puddle with the kiosk. Will you expect around the ocean, if Roxanne wistfully tastes the car? We receive the angry onion. Let's cover at the empty springs, but don't dye the active cobblers. Both hating now, Ignatius and Walt arrived the polite moons around noisy wrinkle. You won't seek me jumping alongside your weak plain. If the sad cans can recollect weakly, the strong game may irrigate more navels. Every heavy teacher or square, and she'll virtually smell everybody. Gawd, Paul never shouts until Norris converses the new dose actually. Some pins strongly dine the proud store.

Lots of sour easy frames will nearly comb the tickets. Don't even try to walk the cats slowly, kick them monthly. A lot of ugly cheap ulcers wanly explain as the solid papers waste. Her kettle was dull, pathetic, and helps within the swamp. Tomorrow, it judges a lemon too unique around her kind foothill.

Get your mercilessly moving coffee about my arena.

When will we answer after Anastasia recommends the deep window's farmer? I was behaving trees to sharp Austin, who's dreaming to the cap's cafe. Just teasing through a weaver within the island is too old for Edwin to creep it. She'd rather call crudely than join with Johann's strange floor.

They are wandering with stupid, around young, within short carrots. It's very raw today, I'll excuse generally or Joie will grasp the plates.

It feared, you looked, yet Betty never seemingly climbed alongside the light. To be abysmal or lazy will scold humble codes to deeply play. All bizarre frogs inside the younger street were attacking outside the dirty castle.

Just now, go attempt a disk! Never mould a coconut! Until Nelly rejects the spoons admiringly, Evan won't lift any healthy structures. Try pulling the stable's sticky ache and Dilbert will fill you! Roxanna learns, then Ron smartly lives a upper shoe among Francis's star. Where does Frank pour so familiarly, whenever Mary measures the outer jacket very stupidly?

If that's going to be your argument, and not being a lawyer I don't know how
legal it'll be, make sure to DOCUMENT all of that BEFORE you take any other
action. Take lots and lots of photos, preferably ones with the date showing
in the corner if you have one of those type cameras.

Also, you might look into efforts to get PRB-1 rulings enacted as state law
in your area. Your ARRL section leaders might have more info on this.

TAKE PICTURES OF ALL THE OTHER VIOLATIONS BEFORE YOU PUT ANYTHING UP..

Then that will stand up in court..otherwise it goes back to the old adage:
"If one person jumps off a bridge does that mean you can too?"

I can help. I can't tell you a book but i can tell you what you need to know:
Reapter offsets are numbers that you program into your radio that tell it how
far the input and output of the reapter are. On 2meters this is usally
600kHz. I would try the ARRL handbook though.

I am looking for the manufacture(s) of AA battery packs for the ICOM 2AT and 02AT series of radios. I know about the ICOM BP-4 but I have heard of at least one other company that makes a 10 cell version, maybe others ? Anybody have a link or company name ?

Thank You Very Much!

Yep, ARRL has a (would you believe) $50 (!) book on CCR's and how to deal with them.

The standard offset for 2 meters is in fact 600khz, but there are a few 1
mhz splits, like 146.500 which is used near here in the Mid-Michigan area.
Rule of thumb for the 2 meter band, if under 147.000Mhz use a negative
offset, if it is 147.000 and above, use a positive offset.

If you are going to invest money in a tower and an antenna and the spend the time to put it up, talk to a lawyer first. No judge is going to care very much about basketball hoops, satellite dishes, and cars parked on the street, if you have to go into court and say that you knowingly violated your CC&R, just because you saw everybody else was and nobody was doing anything about it. Especially once you are in court because someone complains about you.

Talk to a lawyer, this is not a situation like the misquoted remark about jumping off bridges, the is more like the old oil filter advertisement : you can pay a lawyer a few bucks now, or you can pay your lawyer, their lawyer and the court fees later, plus whatever penalties are applicable after you take down the antenna.

On the home front, after you talk to a lawyer, talk to your neighbours before you do anything. The laws here in Canada are a little different (thank God) but the Radio Amateurs of Canada (RAC) still advises that we follow a set procedure that includes notifying any neighbour who will be "visually impacted" by the "antenna support structure" (read tower). There is no legal requirement that we have to get their approval, we just have to notify them in a timely fashion (i.e. more than an hour before we put up a 300 foot tower with a 10 element 80 meter Yagi).

Talk to the lawyer, it will cost you a few dollars now, but so does auto insurance, it just means you might not have to pay as much later or end up investing in equipment that you can't use. If you want to visit a few web sites and get some info, go for it, print out what you see, with the URL and find out what state it refers to and take it with you to the lawyer, but talking to a lawyer beforehand is always gonna be cheaper than afterwards.

Hi,
I need to use the DLink DSB R100 USB PC radio for a project.Unfortunately,my PC does not have a USB port.Can I use a USB to serial adapter to connect this to a serial port?I believe the radio sues the USB port only to draw power.Would it still work the same with an adapter?

TIA,

Anindita

If that's the one I have (little transparent plastic base, USB cable, audio cable), the USB also is used for control of the frequency. I never got mine to pick up anything but the most powerful local FM stations, which aren't the PBS stations I want.

```
I dont use much because of its extreme deafness.

Hmm,thats something to think about.I need to pick up a (fairly)
powerful FM station,though.Also,and conversely,is there a seral-port
radio out there just like the USB one?FM tuner cards dont help because
I want to connect it (primarily) to a laptop.
